●●●● GCRU #430 on January 19, 2011 (in its 9<sup>th</sup> year)

Welcome to Gold Charts R Us.

It's been a volatile week! Gold fell sharply on Friday but it's rebounding today. Silver and gold shares have been similar. This type of volatility is a sign of caution. It's telling us that prices are uncomfortable at the higher levels, at least for the time being.

Opinions are all over the place and this too is fueling volatility. We're hearing more talk that gold is in a bubble and this could be the beginning of the end.

On the other hand, our good friend Chuck Butler noted, quoting the GATA website... "demand for gold bullion has been unrelenting since gold's price dropped below \$1400 an ounce. We cannot meet all the inquiries we are getting, said Nigel Moffatt, Treasurer of the Perth Mint, one of the world's largest gold refiners and distributors".

But still the price action tells the story. Sure, growing demand should drive prices higher, but often the fundamentals (like demand) and the prices are out of synch. And when push comes to shove, we have to go with the price action. The reasons why will always become obvious later. That's why we have to trade based on what the markets are telling us, and currently they're saying to maintain caution for the time being.

Increasingly, an intermediate top is likely forming. This has yet to be confirmed but downward pressure prevails. During the past two weeks, we've been stopped out of our short term gold positions and four gold shares. So even though gold is technically trading in a sideways market and no concrete levels were broken this week, as you'll see in this week's tech talk, more downside action is likely coming.

Plus, the U.S. Dollar has been volatile too. It's influencing the markets, along with better economic signs, which is decreasing demand for safe haven investments. But that could turn on a dime and overall, the market is skittish. That's why we're not jumping in yet. We're watching our key levels carefully based on these signals, we'll take action and we recommend you do the same.

Next week we'll introduce you to one of our favorite gold timing indicators. It's been quite reliable over the years in identifying medium-term trends. That is, trends that last for a few months. The bottom line, it too is warning that a steeper decline is likely.

Of course, this bull market in gold, and the other metals and shares has been extremely strong and unique. The fundamentals backing it up are so solid, we also have to keep an open mind. In other words, we may not see a lot of sustained downward price action.

For this reason, we feel it's important to briefly cover different aspects of what we call the big picture. After all, that's the driving force behind gold's bull market which has now been in force for ten years, and it's why we believe it will continue in the years ahead.

Ups and downs, and volatility are normal when mega bull markets like this one are in force. But before we move on to this week's Tech Talk, let's review one of the most important big picture factors driving this bull...

***BIG PIC:*** We all know that this economic recovery in the developed world is mostly based on unsound fundamentals. Massive spending and excessive stimulus have been the primary driving factors boosting the economy.

But there has been a high price to pay for this recovery. It has come out because an unthinkable amount of debt has been taken on, especially in the U.S., the world's largest economy.

Consider this...

In the US, it took nearly 200 years for debt to reach the \$1 trillion level. It's now near \$14 trillion. This happened in a relatively short time period and all US debt now amounts to about \$250,000 per person, depending on the debt measure used.

Is this health? Of course not! It's historically unprecedented. Experts estimate that in about ten years just the expenses of the interest payments on the debt and Social Security will take up about 80% of all the government's income.

The other 20% will have to pay for everything else. And considering that 10,000 people will reach age 65 daily for the next 19 years, this obviously means huge debts for as far as the eye can see.

In Europe, things aren't much better. Debt ridden countries have been a drag on the Eurozone as debt continues to mount. In Japan, the debt situation is even worse.

In addition, inflation will eventually result due to the Fed's aggressive monetary policies, as well as the stimulus in other countries. In fact, this is already starting. Food prices are now at a record high.

Nevertheless, the global economy is recovering as a result. Even though it may not have a healthy foundation, based on the developed world, it's happening and as an investor that's what we deal with.

One important factor, which could partially explain why this discrepancy is currently taking place is because big changes usually end up taking much longer than you'd think.

In other words, sooner or later the negative economic fundamentals (debt) are going to catch up with reality. There will be severe consequences. But again, no one knows exactly when that's going to happen.

The markets, however, will provide plenty of insight and we'll take that, rather than the dozens of expert opinions out there. Since gold is a leader, it looks ahead. And this is one important reason why it's been rising, and why it'll keep rising over the long haul.

***Tech Talk:*** Gold has not been able to break above the \$1390 level with significant strength. This is showing signs of weakness, suggesting that it is likely poised to decline further before it makes a rise to test/surpass the old highs.

Although gold was unable to break above the 1390 level, it has held above our \$1355 support area. Nevertheless, it's also potentially forming an H&S top, which would give us a downside target of approximately \$1300. For this to happen, we would need to see a clear break below the Dec – Jan neckline, which coincides with the 1355 support we have been mentioning.

This 1355 convergence is also the low area for the Dec – Jan downtrend channel, which has served as support during the past two months. A clear break below it would tell us two things: 1) get out of your positions and buy more at a later date taking profits when you can, and 2) look to sell short to take advantage of the decline.

Interestingly, gold shares have been leading the decline for gold since early Dec while gold went on hitting record highs. Even though gold rose to a new closing high at the end of Dec, it happened on low volume and the intraday high was not broken. This shift in volume was another sign of a possible reversal.

Since Dec 31, 2010, when gold reached its record closing high, we have seen higher volume activity during dips and lower volume activity during rises. In other words the rises have not been strong enough to break above resistance levels which would take gold to new highs... not a good sign.

For the most part, gold shares did not reach closing record highs in late Dec and they are showing a clearer downtrend channel since the highs early Dec. This coincides with the weak rise gold had on the last day of the year when it reached a closing high.

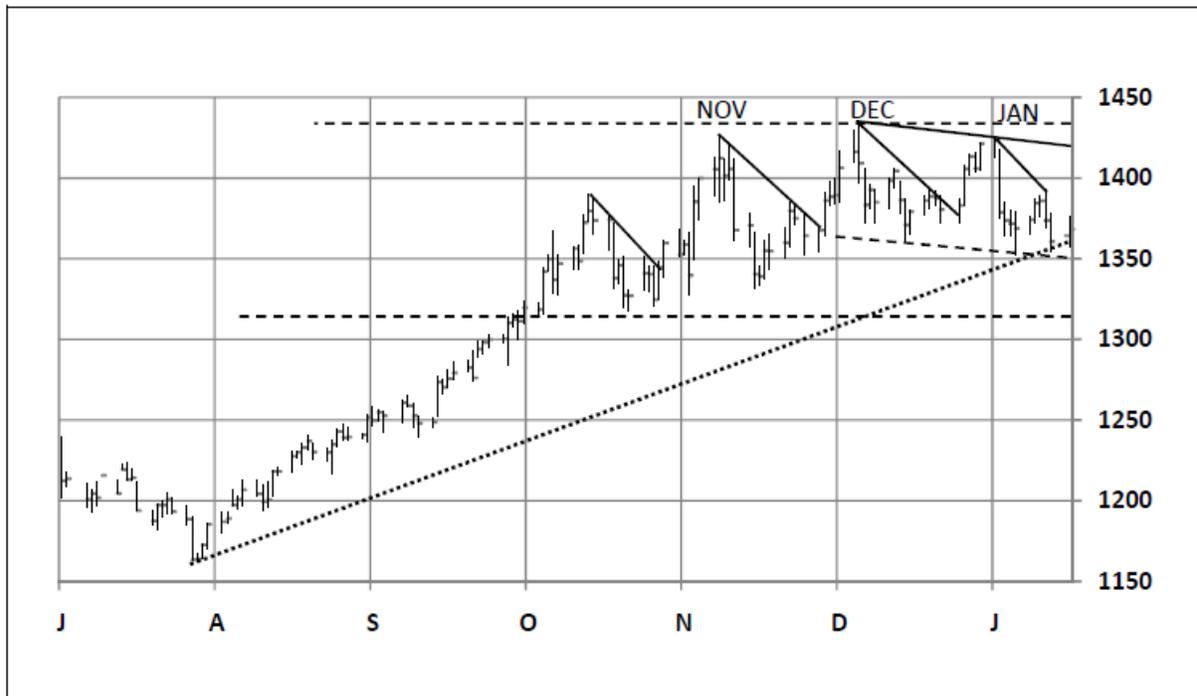

The Gold Stock Advance/Decline line is also showing strong resistance that has not been broken during the past month or so, and it is not looking like it will in the weeks or months to come. A clear break in the Advance/Decline Line below 5331, would confirm the decline we've been seeing in gold shares, which would be yet another sign leading the war for gold.

The HUI Index is showing us similar action. It too has been in a steady and clearer downtrend channel since Dec. Two important supports were broken late last week telling us that the overall decline in gold shares will likely continue for a while. This does not mean that the positions that have been acquired recently are not good, as all of the indicators are showing that gold shares are actually oversold! This suggests that gold could rise in the short term before it continues to correct downward following its long non-stop that has lasted two years.

All of this tells us that gold is poised to decline before it resumes its mega uptrend rise. The correction that we have been waiting for is occurring as we go to press. We have to take advantage of it by taking profits while we can and wait for the decline to complete or intermediate rises on the way down to buy more and gain on them.

### COMEX GOLD FEB FUTURES - DAILY - 6 MONTH VIEW

(GC2011G) N.Y. GOLD 11G DAILY 1/18/11 C= 1368.2

***What does this tell us?*** Wait to buy gold if strength is confirmed by breaking above \$1390 resistance level after a 2dc. Moreover keep a close eye on 1355 support level as a clear break below it after a 1dc would strongly suggest the downward reversal is in force and gold could then decline to the \$1300 level or lower!. In addition, we would sell Feb gold short after a 2dc below \$1355. Place a stop 3 points above entry level and cover half at \$1335.

As a side note, the gaps that you see on the charts are weekly gaps, showing the advance or decline that happened during the week. This allows us to see the movement on a weekly basis more clearly.

## COMEX GOLD FEB 2011 FUTURES CX 15 WEEK

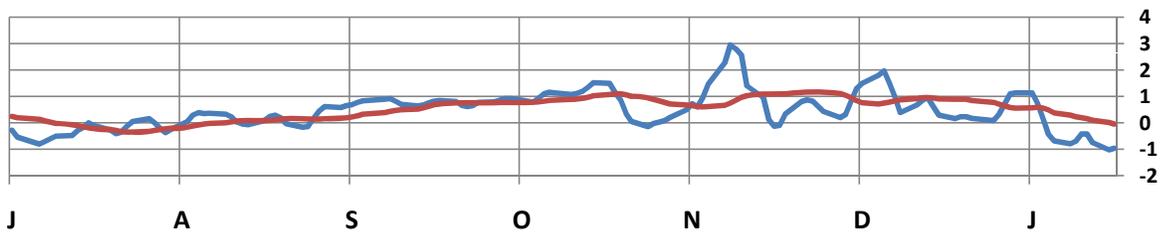

**Comex gold Feb 2011 futures Cx 480 min tick chart (all sessions)**

Open trades:	Long at:	Initial entry price 1387.70 (Dec 01-10) Gamblers re-bought at 1396.70 and 1406.90; Traders rebought at 1412.20.
	Stop:	S/T: stop triggered last week; M/T: 1 dc below 1355
	Profit targets:	1425, 1440 &/or 1469, 1509
New Recom:	If long, be prepared to sell. If out, buy after break above Jan downtrend line 2 dc at or above 1390. Sell short Feb after a 2 dc below 1355, stop at 3 points above entry level, cover half at 1325.	
Comment:	H&S top formation underway! A break below 1355 level would confirm H&S top which would have a down target of 1285 - 1300. Moreover, triple top (Nov-Dec-Jan) also suggests maturity. Look for the signs to sell short to gain on the downward correction!	

**(SI2011H) N.Y. SILVER DAILY 1/18/11 C = 28.912**

SPINNER (3, 16, 16) -0.95 -0.04

Open trades:	Long at:	Initial entry price: 27.53 (Nov-11-10); Gamblers rebought at 30.704; others at 30.513. Took profits at 29.7 :)
	Stop:	S/T: at 27.80; M/T: 1 dc below 27.80
	Profit targets:	32.50 &/or 33.75
New Recom:	Keep rest of position. Place stop at 27.80 to protect rest of position in case of a decline. Buy again if dips and holds after 2 dc above 25.50, or if 2 dc above 30. Sell March short after 1 dc below 25.50, stop at 1.50 above entry level, cover half at 23. Silver shares declining to Nov lows, may be leading silver to a further correction.	
Comment:	Not much action since last week as it is showing sideways activity. Barely broke below the Aug / Jan uptrend line which could be the start of a larger correction. Must be aware of the signs to protect profits and look to reenter at later dates. Spinner oversold at July levels which could also suggest a rise in the short term could be on its way.	

## HUI GOLD BUG INDEX (INDEX) DAILY 1/18/11 C = 523.74

### HUI GOLD BUG INDEX DAILY

<p>Comment:</p>	<p>Gold shares have been leading gold to the correction we have been waiting for! In the past weeks, our short term stop on gold and four of our stocks got stopped out, which is a sign that the correction is underway. This week HUI broke its Oct - Jan support level showing that it is poised to decline further. Not a good sign for gold or gold shares. Must keep tight profit/loss stops to protect your positions!</p>
-----------------	---

**GOLD STOCKS ADV/DEC LINE DAILY CHART 1/18/11 C=5340**

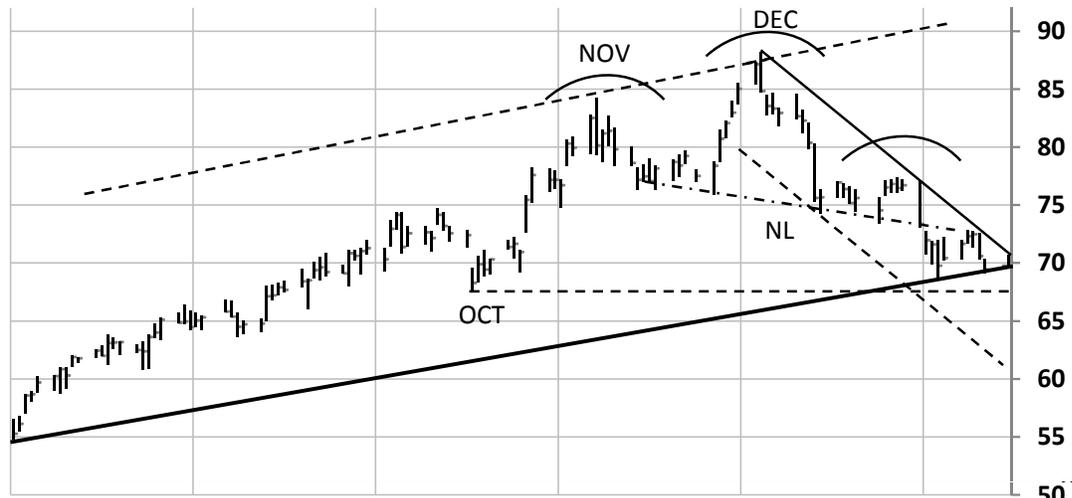

**Schultz Gold Stocks Advance&Decline Line (SGS A/D) daily chart:**

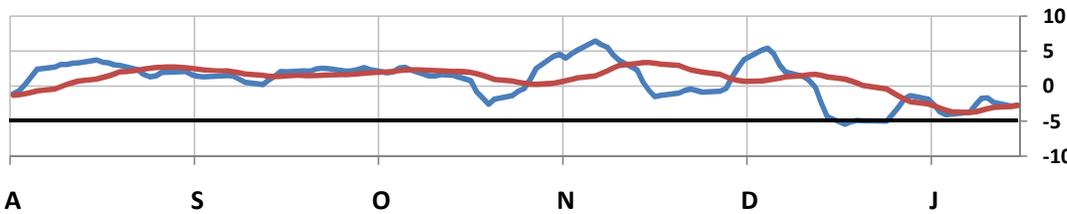

Comment:	Strong resistance formed on top side of Dec - Jan downtrend channel. Broke to new lows since Nov, a sign that a further decline may be on its way. On the other hand, a clear break above downtrend channel resistance would be bullish for gold shares.
----------	--

# GOLD SHARES

AEM -- AGNICO EAGLE MINES LT-DAILY 1/18/11 C = 70.12

SPINNER (3, 16, 16) -2.72 -2.76

**Agnico Eagle Mines (NYSE: AEM; Toronto TSX:AEM-T); gold: US\$**

Open trades:	Long at:	Initial entry price 58.90 (Apr 16-10). Some bought a bit at 72.70.
	Stop:	M/T: 1 dc below 67.95
	Profit targets:	80 (if bought low) 88 &/or 89.45 &/or 92.50 &/or 94.80
New Recom:	Keep your positions. All buy more if breaks above Dec - Jan downtrend line after 1 dc above 76.	
Comment:	Strong resistance has been created at the top side of the Dec - Jan downtrend channel as it has not been able to break above it. Also, it clearly broke below the Nov - Dec H&S top neckline and has failed to bounce clearly above it, thus creating an important convergence as the neckline meets with the Dec - Jan downtrend line. A clear break above this convergence would allow room for an intermediate rise. Spinner is in oversold.	

**(BTO-TO) B2GOLD CORP DAILY 1/18/11**

**C = 2.43**

**B2Gold Corp (Toronto TSX: BTO-T); gold: CAD\$**

Open trades:	Long at:	Initial entry price: 2.05 (Sep 22-10)
	Stop:	S/T: 1 dc below 2.35. M/T: 2 dc below 2.35
	Profit targets	2.86 &/or 3.05 &/or 3.15
New Recom:	Keep positions. Look to sell all after 1 dc or 2 dc (if M/T) at or below 2.35 Traders: If out, wait to buy on breakout above Dec downtrend line 1 dc above 2.65	
Comment:	Holding near important support at Aug - Jan uptrend channel. If clear break below support occurs, could decline further. Stop for M/T raised to 2.35 to protect profits. Also Symetrical Triangle formed between Dec - Jan downtrend line and Aug - Jan uptrend line. A break above the triangle would signal bullish activity and good time to buy at the 2.65 level.	

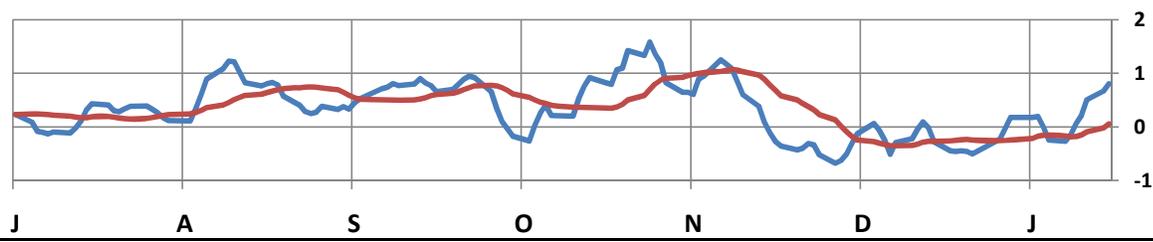

**(OSK-T) OSISKO MINING DAILY 1/18/11 C = 13.25**

**Osisko Mining (Toronto TSX: OK-T); gold: CAD\$**

Open trades:	Long at:	No open positions, waiting for breakout.
	Stop:	Our ST & MT stops were triggered last week. Took profits!
New Recom:	Look to reenter if Dec - Jan downtrend line is broken after a 2 dc above 15.	
Comment:	Broke strong support levels below 13.35 and below Jul - Jan uptrend line; weak sign, especially if closes below last weeks low. Currently, however, it could bounce up first as it's now holding at support and it held at the low side of downtrend channel.	

**(EGU-T) EUROPEAN GOLDFIELDS DAILY 1/18/11 C = 14.88**

**European Goldfields (Toronto TSX: EGU-T; LSE: EGU); gold: CAD\$**

Comment:	Took profits! No open positions, but waiting to buy. Nov downtrend being tested but still intact. Spinner now rising. Buy again on 1 dc above Nov high resistance level at 15.82
----------	--

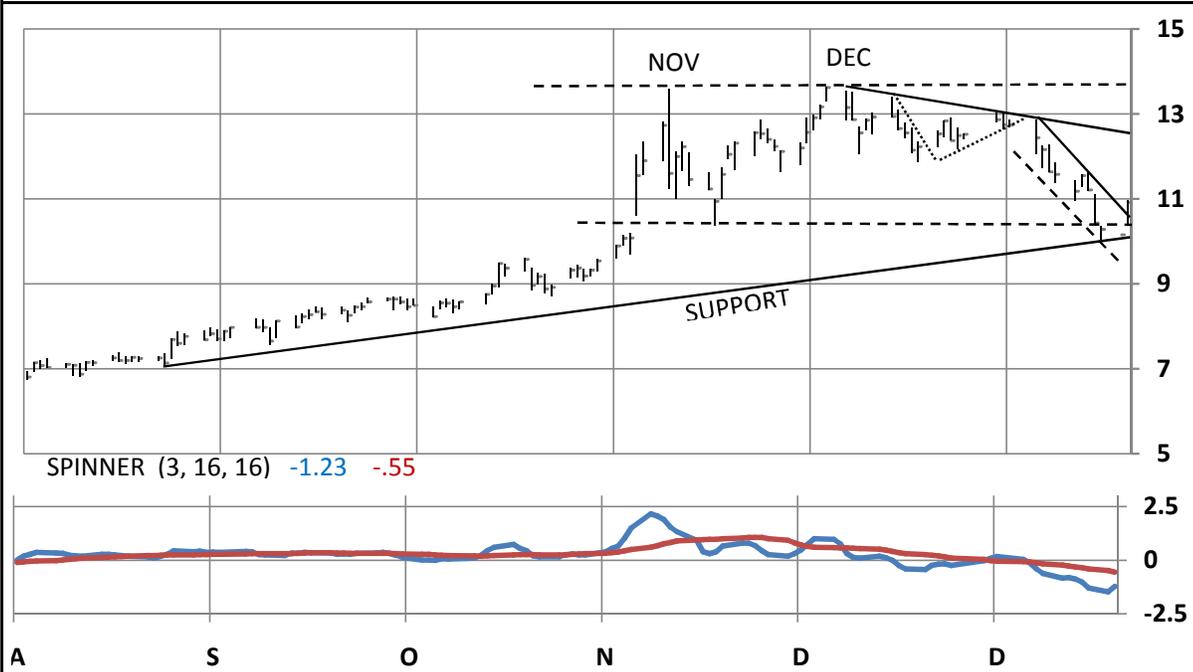

**(SMF - T) SEMAFO DAILY 1/18/11 C = 10.79**

**Semafo Inc(Toronto TSX: SMF-T) gold: CAD\$**

Open trades:	Long at:	No open positions; waiting to buy.
	Stop:	Exited via profit stop.
	Profit targets:	14.50 &/or 15.65
Comment:	A downside wedge is still forming. Look to re enter if breaks clearly above the Dec downtrend line after a 2 dc above 12.	

**(SVM -T) SILVERCORP METALS DAILY 1/18/11 C = 10.92**

**Silvercorp Metals (Toronto TSX: SVM-T) silver/lead/zinc: CAD\$**

Open Trades:	M/T stops triggered this week.
Comment:	Declining steadily within Dec downtrend. Broke below Nov support level but now holding. Keep on eye on this support at 10. Re enter after Dec downtrend is clearly broken on a 2 dc above 12.

**(SLW) SILVER WHEATON CORP DAILY 1/18/11 C = 32.75**

**Silver Wheaton (NYSE: SLW; Toronto TSX: SLW-T) silver/gold: US\$**

Open trades:	Initial entry price:	15.84 (Feb-17-10) Some re-bought at 38.42 and at 36 or 36.75
	Long at:	
	Stop:	M/T: 2 dc below 30.50.
	Profit targets:	42.50 &/or 45.80 &/or 48.50.
New Recom:	If long, keep positions. Traders look to buy after a break above Jan downtrend line on a 1 dc above 36 or after a dip that holds a 2 dc above 31 for a possible short term rise. All others wait to reenter after a break 1 dc above Dec downtrend line at 39.50	
Comment:	Broke below lower side of Dec downtrend channel. Not a good sign of strenght. But it may be bottoming if holds at Nov support and Sept - Jan uptrend. If so, it is likely a good time to buy as Spinner is oversold and therefore showing that a short rise is due.	

(TMM - V) TIMMINS GOLD CORP DAILY 1/18/11 C = 2.37

**Timmins Gold Corp (Toronto TSXV: TMM-V) gold: CAD\$**

Open trades:	Long at:	Initial entry price: 1.88 (Aug-16-10). Gamblers re-bought at 2.56 and 2.73
	Stop:	S/T: 1 dc below 2.20. M/T: 1 dc below 1.95
	Profit targets:	2.75 &/or 3.10
New Recom:	Keep positions. Traders buy after 1 dc above 2.60 or after a dip that holds a 2 dc above 2.20. All others buy after 1 dc above resistance at 2.75.	
Comment:	Not much action this past week. Has found support at the bottom side of the Dec downtrend channel and still holding at the Nov uptrend channel forming a symmetrical triangle for January. A clear break above the Jan downtrend line at 2.60 would be very bullish. Spinner is oversold and it could be a sign of upcoming strength.	

**(UXG) US GOLD CORP 1/18/11 C = 7.29**

**US Gold Corp (Amex: UXG, Toronto TSX: UXG-T) gold&silver: US\$**

Open trades:	Long at:	Initial entry price: 5.42 (Sep-22-10). Some rebought at 7.50
	Stop:	S/T 1 dc below 6.85 M/T: 1 dc below 6.55.
	Profit targets:	7.87 &/or 8.56 &/or 8.94.
New Recom:	Keep positions. If out, wait for break of Jan downtrend line after a 1 dc above 7.85.	
Comment:	Possible H&S top forming with downside target of 6. Must wait for break below neckline support to confirm formation. Likewise, a symmetrical triangle has formed and a break above the Jan downtrend line at 7.60 would confirm bullish activity. Spinner looking oversold but keep eye on possible H&S top. Look at gold as a guide as it clearly has been following its pattern.	

# FUTURES

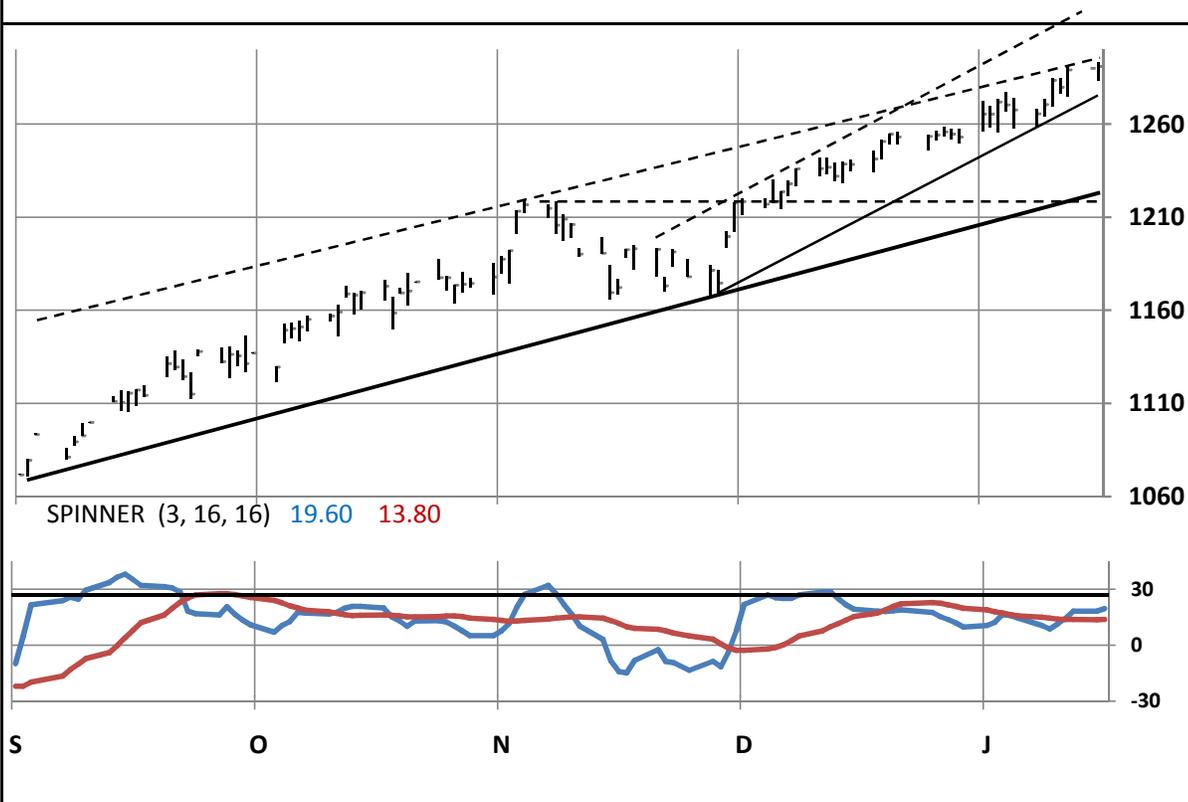

(CL2011G) LIGHT CRUDE OIL-11F-DAILY 1/18/11 C = 91.25

**Crude Oil NY Feb 2011 futures - daily chart:**

Open trades:	Long at:	91.07 (Dec 23rd). Some bought at 89.
	Stop:	S/T: 1 dc below 87; M/T: 1 dc below 86.
	Profit targets:	94.50 &/or 98.50
New Recom:	Keep positions. If out, it's not too late to buy!	
Comment:	Reached an 8 month high on 91.86. Creating new S/T support above 88 level. Still rising steadily within Nov uptrend channel and forming mini Cup & Handle with an upside target of 94.50. Ride the bull!	

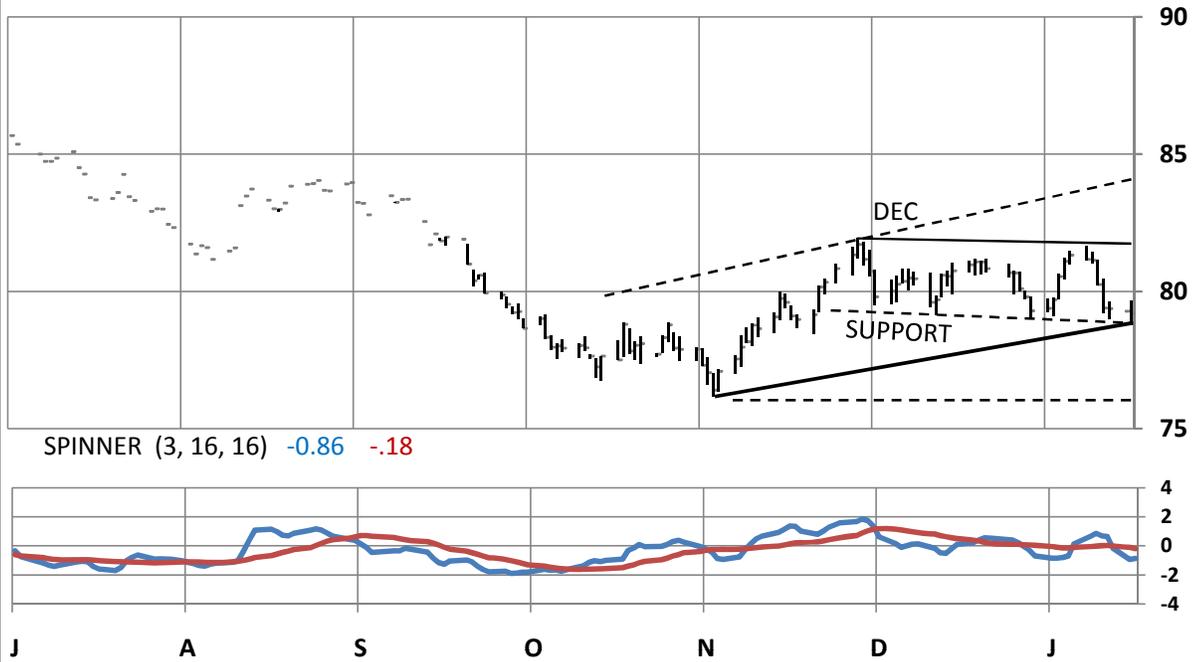

(SP2011H) S&P 500 INDEX -11H-DAILY 1/18/11 C = 1291

**S&P500 Index March 2011 futures - daily chart**

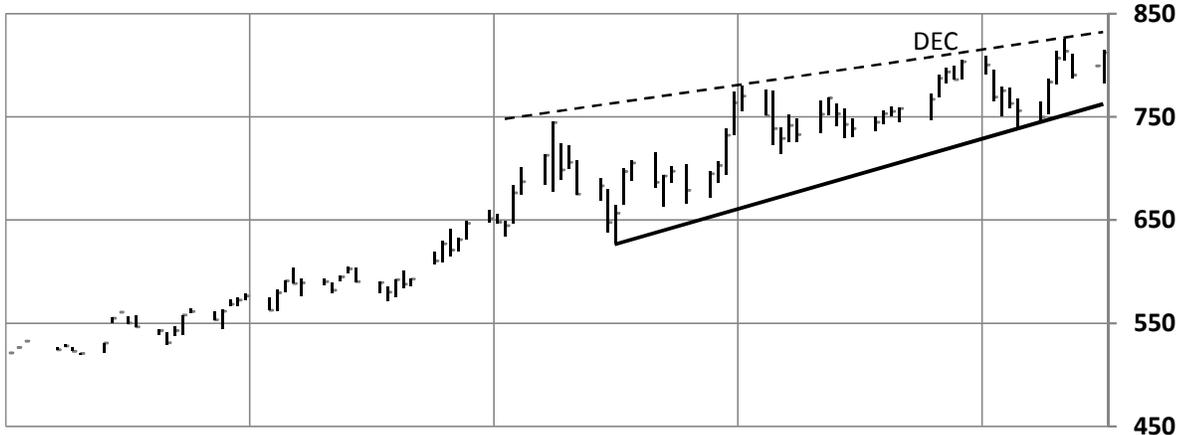

Open trades:	Initial entry price: 1227.90 (Dec-09-10). Traders re-bought <u>March</u> at 1238.40, 1249.80 and 1283.
Long at:	
Stop:	S/T: 1240, M/T: 1 dc below 1240 (March).
Profit targets:	1280.00 (reached! :) ) &/or 1300.00 &/or 1350
New Recom:	Keep positions. If you didn't buy last week, it's not too late.
Comment:	Currently near the top part of the Sept / Jan uptrend channel and at the middle of the Nov / Jan uptrend channel. Poised to break above top side of 4 1/2 month to reinforce the stronger channel. Spinner still has room to rise further. Very strong above 1260. Keep your positions!

(DX2011H) U.S. DOLLAR INDEX-11H-DAILY 1/18/11 C=79.195

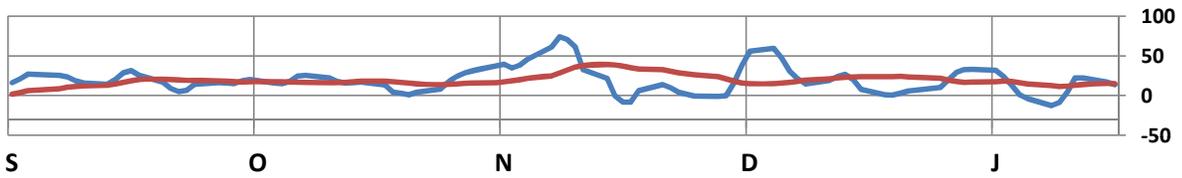

Open Trades	Long at:	Entry Price: 81.10 and 80.
	Stop:	S/T & M/T: 1 dc below 76.
New Recom:	Keep positions. Look to buy more after 1 dc above 82. S/T and M/T sell after 1 dc below 76.	
Comment:	Nov / Jan uptrend channel formed. Looking bullish for the short term, especially by staying above important support. Spinner has room to rise. Keep positions. Buy more if Dec high is broken on 1 dc above 82.	

(PA2011H) PALLADIUM-11H-DAILY 1/18/11 C=812.35

SPINNER (3, 16, 16) 13.86 14.99

Recom:	Sell March Short on 1 dc below 750, stop at 3 points above entry level, cover at 700.
Comment:	Soaring rise poised for downward correction, which is why we are adding palladium to the list. Rising wedge is forming with a downside target of 690.

•Subscribers can obtain free online chart updates for all gold shares in *GCRU* via: [www.bigcharts.com](http://www.bigcharts.com). To view Canadian stks the following prefix must be used before the symbol: CA: (ie, to view Agnico Eagle (Toronto) you must use CA:AEM).

•**Note:** U should NOT feel our recommended prices are set in concrete. If mkts suddenly feel hot or cold to U, or dramatic news occurs, U can buy or sell, or stop at slightly higher or slightly lower prices. It also hinges on your experience level. Some people can use our prices as guides & know when they can take bigger risks.

**Spinner:** Spinner is an in-house momentum indicator (not always shown on charts). Momentum indicators use the rate of change in price to determine predominant energy flows. Spinner trading signals are generated when the faster timing line crosses above or below the slower confirming line. Upside crosses in the lower range of positive territory offer the most reliable signals for longs; downside crosses in the top range of negative territory for shorts. Avoid trading against the timing line, ie, buying/selling if the timing line is in corrective mode (against direction of trade) unless the confirming line is positioning for a new 'confirming cycle'. It's important to always be aware of location, direction & cycling phase of the confirming line. Spinner signals are more effective in trending mkt's than in trading ranges where indicators such as Stochastics & Williams %R should be used.
