Gold Charts R Us

●●●● GCRU #481 on February 8th, 2012 (in its 11th year)

NEW HIGHS FOR THE NEW YEAR

Gold and silver started the year with the best new year rise since 1983. Gold reached an 11 week high last Thursday, **gaining 14% from its December lows.** Silver has been even better. It reached an over 3 month high today, gaining 25% in 6 weeks.

Platinum and palladium are also doing well in their rebound rise, and when all precious metals rise together, you know the rise is solid.

Optimism is growing and with Greece finally looking like an agreement is near, it's pushing the U.S. dollar down while the euro bounces up, along with other currencies. This in turn, is giving a boost to the metals and commodities.

The stock market is also on the rise with positive sentiment growing on the global manufacturing front. In fact, the signs of better economic growth are causing investments in commodities to expand at the quickest pace in 6 years. This has pushed the copper price up almost 25% in 8 weeks!

The markets have been shrugging off bad news and sentiment is looking at the bullish side of the global economy. But we must continue with a cautious eye because we all know the world is swimming in debt and it's in a delicate situation.

Bernanke is still in crisis mode by keeping interest rates historically low. He called a spade a spade today by saying the lower unemployment rate understates the weakness in the U.S. labor market.

He correctly pointed out that the worst part is the unusually high level of long term unemployment. **This is so true. If the U.S. used its old way of calculating unemployment, it would be more like 22%!** The U.S., in other words, is a long way from returning to normal.

High unemployment and a weak housing market continue to be the main problems. And with geopolitical tensions rising, especially between Israel and Iran, we should be ready for anything.

The rising gold price is a good measure of fear and uncertainty, especially monetarily speaking. This chart shows the stepping stones in the bull market since 2004. Here you can see the platforms gold has formed once it reached new highs during the rise.

The latest one started forming once gold reached its record high near \$1900 last September. Note that gold then normally consolidates and forms a sideways band for several months.

Within this band, we have identified the intermediate moves, and for now a rise we call "A" is underway. It started at the December low and A rises can rise up to test the old highs but they don't usually reach new highs.

This means that gold is strong within an A rise by staying above \$1690 and it could test the \$1800 level. In a stronger A rise, it could test the \$1900 level.

If this bull market is super strong, gold could rise to new record highs. If it does, then the next super leg of the bull market would be underway.

The stock market has been strong in recent months. But looking at the S&P500 compared to the gold price, you can see the strength may not be long lasting...at least compared to the gold price.

The chart shows the trend favors gold even though the stock market has recently been stronger. Plus, the leading indicator below is rising from a gold low area, which tells us that gold is poised to outperform the stock market in the coming months.

CHART TALK

Profit taking was the action over the past couple of weeks as gold shares reached our profit targets. We've been banking profits as we reach a top for the move.

The Junior and intermediate gold miners have been in vogue as investors have sought riskier investments when sentiment of an improving economy continued to flow into the markets. We can see this clearly in the performance of GDX and GDXJ. Since their respective lows in December to the high on February 2nd, GDX rose a total of 17% while GDXJ gained approximately 32%.... almost double!

We've been mentioning that junior gold miners were poised to catch up to the seniors and they did!

Senior gold mining companies have been rising as well. Not as much as the juniors, but they've held at important levels and have risen with gold since December. Moreover, their indicators, for the most part, are showing that the seniors have not reached overbought levels and have room to rise a bit further, meaning that we'll likely see the seniors rise a bit more in the ST, which will give us the opportunity to bank some more profits.

Gold has held its ground.

It dipped on news that the jobs market in the United States was improving. Moreover, talks and speculation that Greece is fast approaching an agreement with private lenders to resolve their debt issues added to the positive sentiment. All of which eased demand for the yellow metal causing it to dip, giving investors another buying opportunity which was clearly perceived as such as gold bounced back to the mid \$1700s.

Investors know that despite glimmers of positive data, the structure of the world economy is brittle. The fundamental issues with the economy are not being resolved. We haven't seen ideas or measures that provide sustainable solutions, which is ultimately why gold will continue to rise.

Gold held above its December uptrend line, which is becoming important ST support and is trading well above its 75 day MA, its key intermediate trend. However, gold has found some resistance below \$1750. It must clearly break above this level to confirm strength. If gold breaks above this level, it'll likely rally to the \$1800 level, its next intermediate resistance.

Most importantly, gold is not overbought. It's simply strong. Spinner is showing gold with lots of room to rise further.

GDX and GDXJ are exchange traded funds (etfs). gdx is a fund composed of intermediate to senior gold miners, while gdxj is composed of junior to intermediate gold miners. different gold mining companies who's stock is publicly traded will be added at any given moment if the particular mining company meets the fund's criteria. many times if a particular mining company does not meet the criteria, it may be dropped by one and added by another or not added at all.

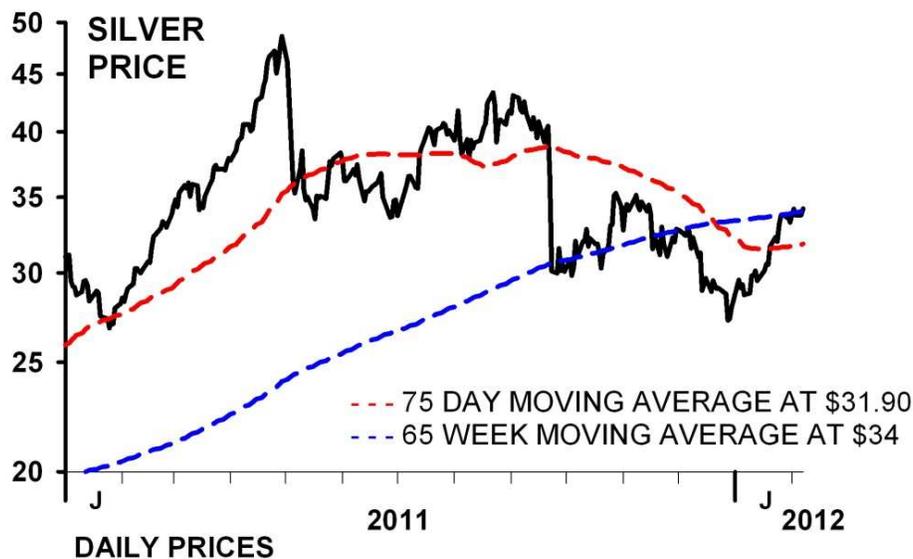

The stock market has been very strong as well. The S&P 500 has risen 22% since the Oct low. However, the stock market is overbought and we'll likely see it correct a bit. The S&P 500, for instance, could still fall to its 75 day MA at 1260 and still be bullish.

Investors may want to cash in on their investments and invest in assets that have room to rise further, such as gold, silver and their shares, specifically senior mines. Junior gold mines could lose some of the excess built up over the past 6 weeks.

We had recommended shorting the S&P 500 and got stopped out as it broke above 1320 on a 2dc. However, we did not emphasis a sell as we believe that there's more downside risk, than upside potential. If you have not covered your shorts, keep your positions. If you're out, then stay on the sidelines for now.

Our indicators are showing S&P 500 at overbought levels, while it's also forming a rising wedge formation with a downside target of 1260 as you'll see in the chart section below. The VIX Index (Volatility Index), which tends to move opposite to the S&P has been declining in a downside wedge pattern and it's clearly oversold, showing it has upside potential. Moreover, the gold to stock market ratio on page 3 is showing gold with more room to rise. This tells us that there's more upside for gold than the S&P 500 at this moment.

HOLDING FIRM BUT RESISTING

Silver continues to dazzle.

It broke \$34, its 65 week MA into a new 12 week high. Silver has held firmly above its 75 day MA and its Dec uptrend line. Silver continues to rise with strength. If silver can hold above \$34, we'll likely see it rise to test its Apr downtrend line near \$38.

Silver shares have been following silver but continue to resist below their Apr downtrend. Until the Apr downtrend is broken, we'll continue seeing overall weakness in both silver and its shares, which is why we continue watching from the sidelines until a clearer sign of strength for the shares can be seen.

So, what does this tell us?

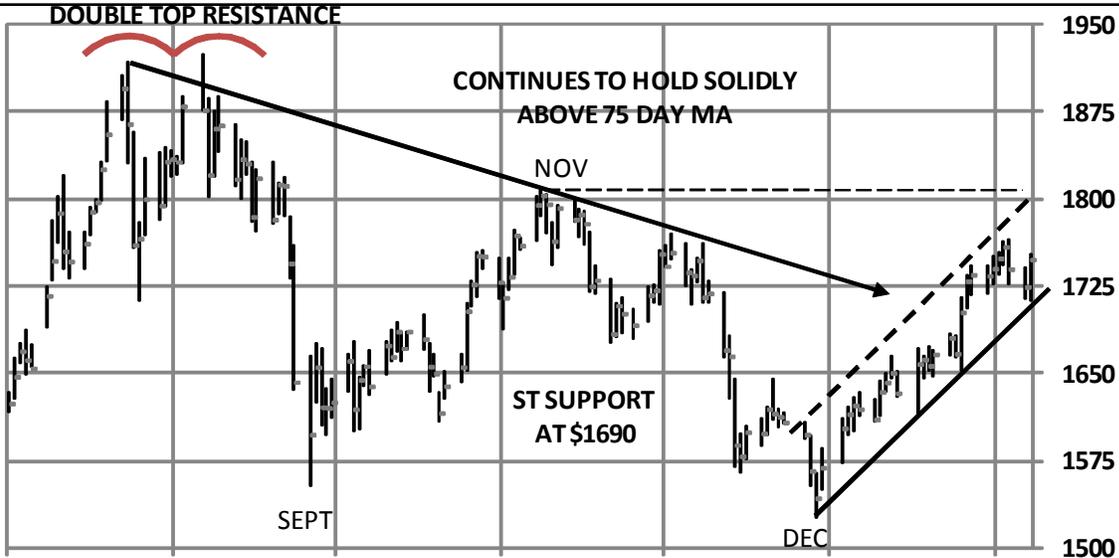

- 1) Keep your gold. Sell a fourth of your position at \$1800.
- 2) Keep your silver. Sell another fourth of your position at \$36.
- 3) You should be out of your junior and intermediate shares. Keep your senior share positions and wait for profit targets to be hit before selling.

●●●● Golden regards from *the Adens...* Pamela, Mary Anne, and Omar

●●●● If it's Wednesday, it's *Gold Charts R Us*

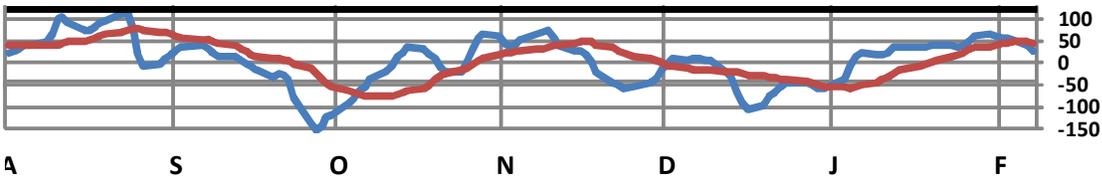

GOLD, SILVER & INDICES

GOLD APR 2012 (GCJ12) 2/7/12 CLOSE = 1748.4

SPINNER (3, 16, 16)

CROSSING BELOW MT MA...

Open trades:	Long at:	Entry level: 1640 (Oct-18-11), 1710 (Oct-26-11), 1750 (Nov-10-11), 1725 (Nov-17-11), 1600 (Dec-14-11) and 1595 (Dec-27-11).
	Stop:	All: 3dc below 1600.
	Profit targets:	1800, 1900, 2000 &/or 2200

New Recom: **Keep your positions. Sell a fourth of your position at 1800.**

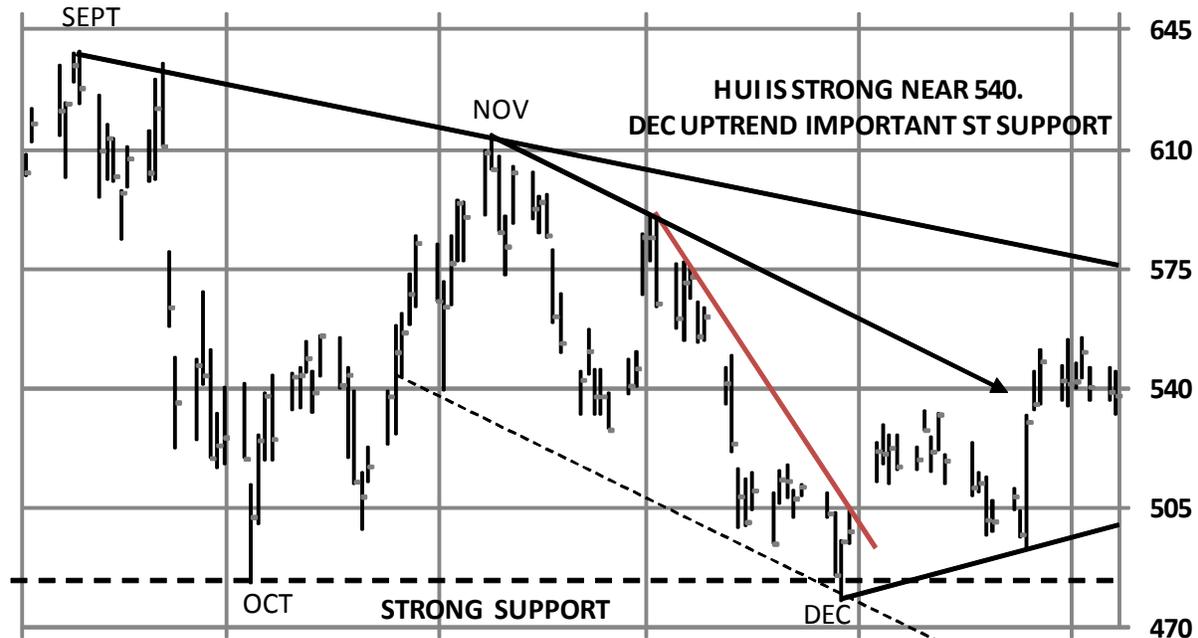

Comment: Gold continues to rise firmly within its Dec uptrend line. Gold declined to the uptrend line on Monday, where it held and rose showing strong ST support above the 1690 level. The 1690 level is an important convergence between the 75 day MA and the Dec uptrend. As long as gold holds above it, we'll likely see more upside to gold. On the downside, gold has been resisting at/or below the 1750 level closing above it only once since last Dec. If gold is unable to break above it we'll see some weakness. Weakness would be confirmed if gold breaks below its ST support at the 1690 level, which could then take it to test the low 1600 level. Keep your positions for now as gold is looking good.

SILVER MAR 2012 (SIH12) 2/7/12 CLOSE= 34.194

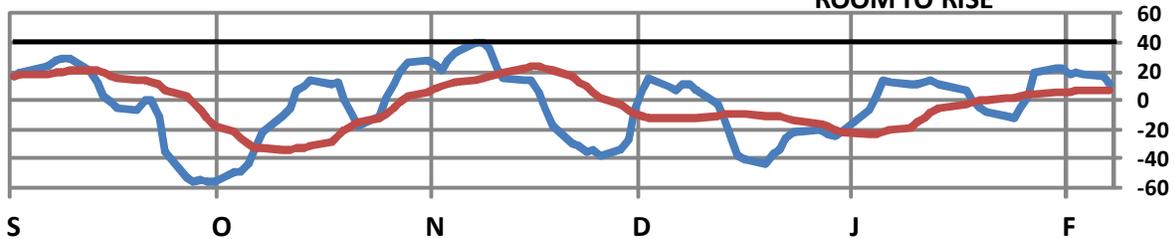

Open trades:	Long at:	Entry Level: 29.65 (Sept-28-11), 29 (Oct-4-11), 29.95 (Oct-20-11), 31 (Nov-25-11 & Dec-12-11), 28.75 (Dec-14-11), 28.80 (Dec-27-11) and 27 (Dec-27 & 29-11). Sold a fourth at \$33 for a profit on Jan-26-11
	Stop:	ST & MT: 2dc below 27.
	Profit targets:	33 (reached), 36 (adjusted) &/or 42.
New Recom:	Keep your position. Sell another fourth of your position at 36	
Comment:	Holding strong... but resisting near its 65 wk MA. Silver has been rising with strength since last Dec. It broke above its 75 day MA and has held clearly above it. Despite silver lingering around 80 on its RSI and Spinner crossing below its MT MA from overbought levels, silver has held firmly above its Dec uptrend and its 75 day MA. Moreover, silver is testing its 65 day MA. A clear break above its 65 day MA would show important strength and a rise to test its major downtrend at the 38 level would then be likely. On the downside, if silver continues to resist at or below its 65 wk MA, we'll see first signs of weakness that could put some downward pressure. A clear break below its 75 day MA at 31.90 after a 2dc would confirm weakness. Keep your positions for now as we're seeing important strength behind silver.	

HUI GOLD BUGS INDEX (HUI) 2/7/12 CLOSE= 538.39

SPINNER (3, 16, 16)

**STRONG ABOVE MT MA &
ROOM TO RISE**

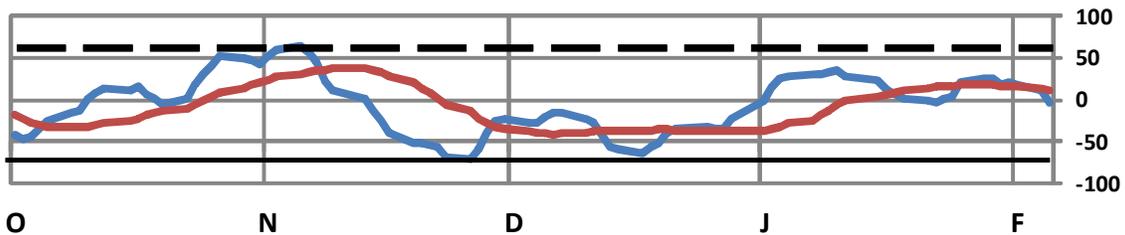

Comment:

Since HUI broke above its Nov downtrend, it's been holding near 540, essentially at its 75 day MA. HUI has found some resistance at its 75 day MA as it has been unable to clearly break above this trend. A clear break above the 75 day MA at 542 would confirm strength in HUI and a rise to test its Sept downtrend at 575 would then be likely. Spinner is strong above its MT MA and has room to rise further. Other indicators like RSI are still not overbought, showing HUI has room to rise further. Junior gold miners have been rising with the stock market but have lost some steam. Senior gold miners are holding up stronger and may continue to rise. We have sold many of our positions for good gains, particularly junior and mid tier miners. We're keeping our senior gold share positions for now and will sell on strength.

ADEN GOLD STOCKS ADV/DEC LINE 2/7/12 CLOSE=5342

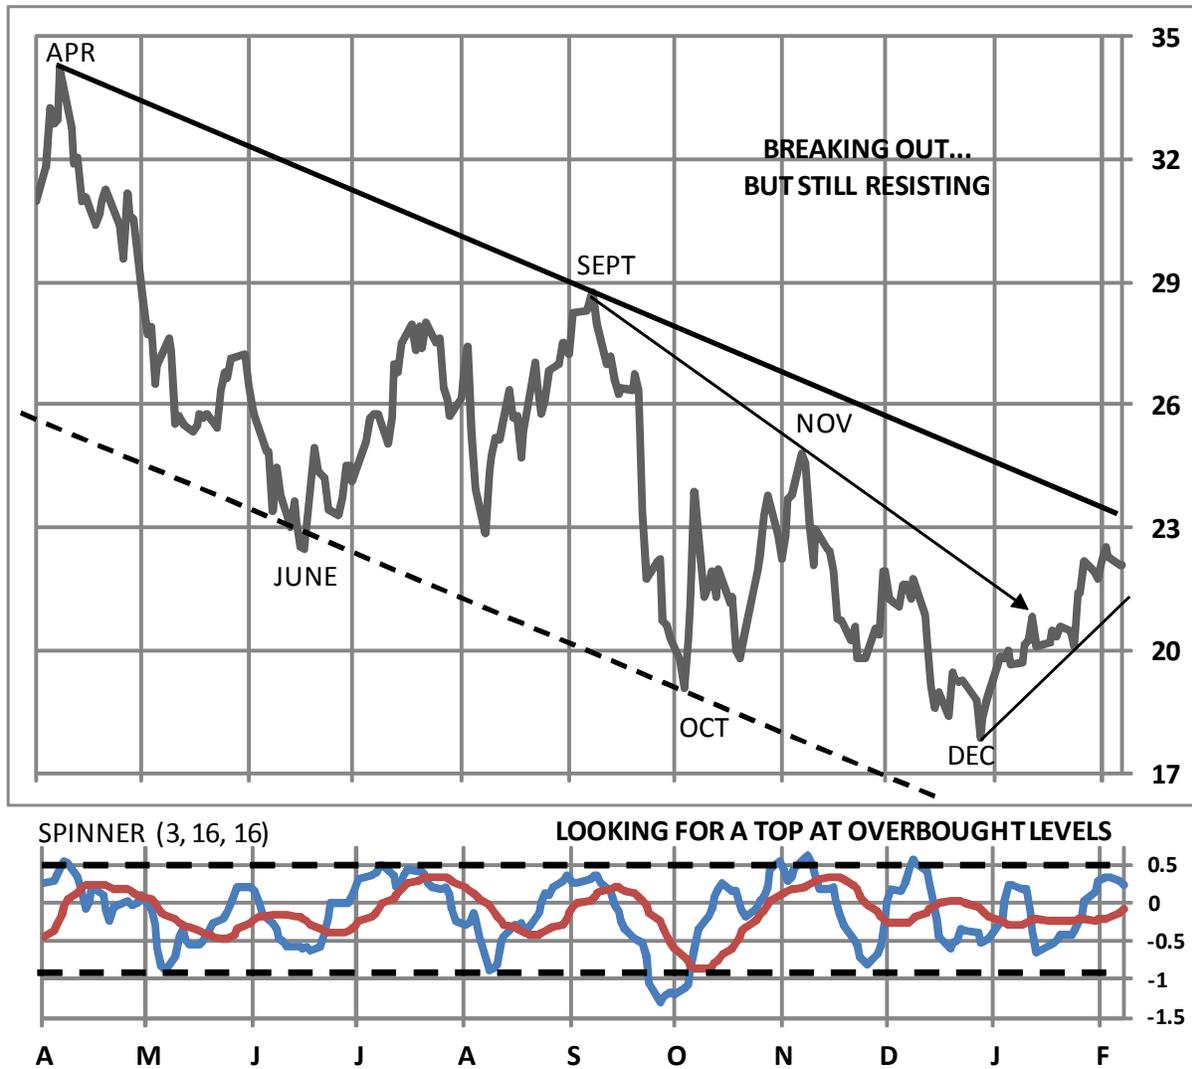

SPINNER (3, 16, 16)

Comment:

Dec upchannel is being challenged and it's resisting below 5400. Spinner near 0 and crossing below its MT MA, telling us that some weakness could be expected. A clear break above 5400 on a 2dc would confirm bullish action and a rise to test the Nov highs would then be possible. On the downside, keep a close eye on the Dec uptrend, a clear break below it on a 2dc would show us gold shares are vulnerable.

ADEN SILVER SHARE INDEX (ASSI) 2/7/12 CLOSE= 22.094

Comment:

ASSI continues to rise with Silver but it's also resisting below its Apr downtrend line. Spinner is looking for a top at overbought levels telling us that resistance below Apr downtrend is still strong. On the upside, ASSI has been rising steadily since Dec and it's looking strong. However, ASSI must break above the Apr downtrend to see renewed strength and a rise to test the Sept highs. We'll continue staying on the sidelines until we see some weakness or a break above the Apr downtrend line.

STOCKS

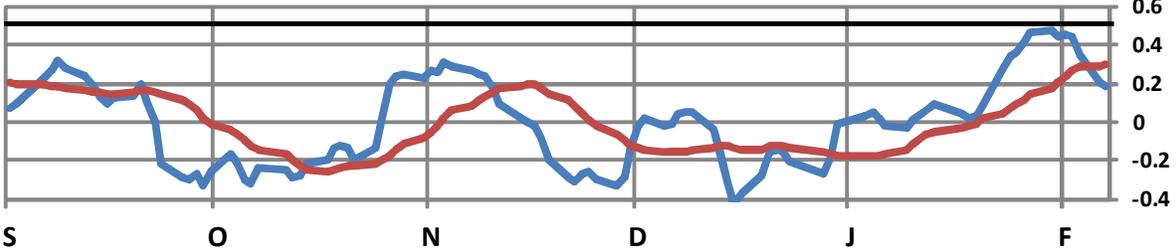

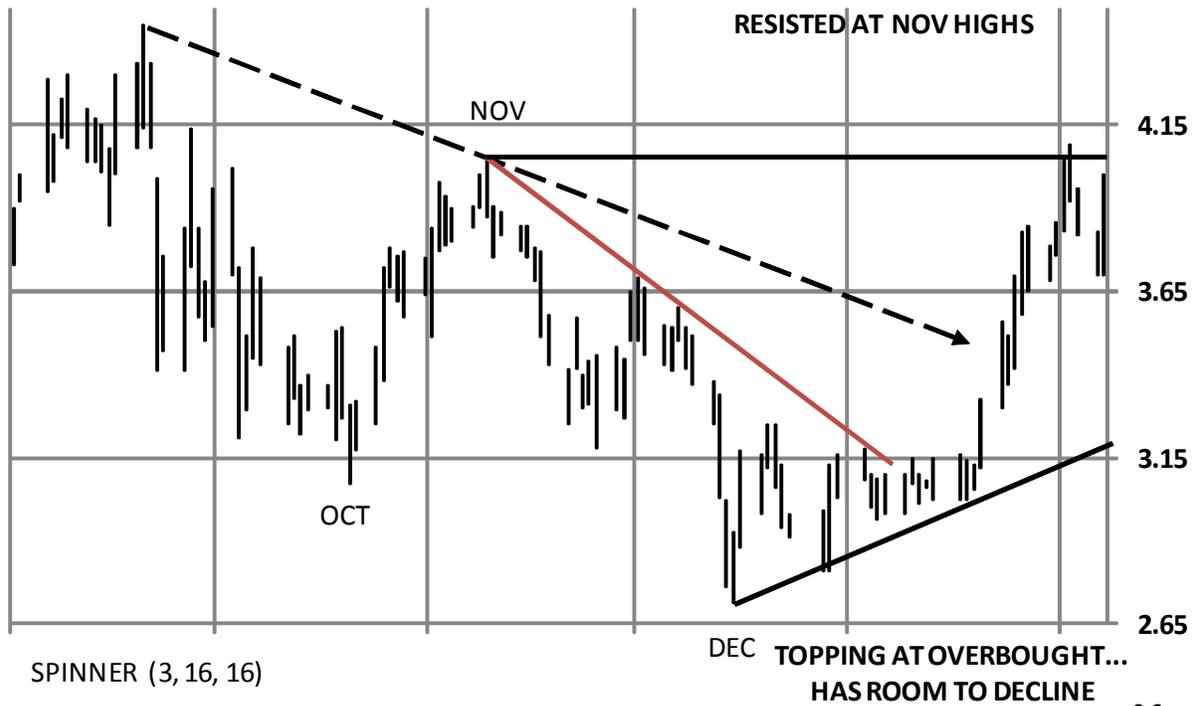

YAMANA GOLD (AUY) 2/7/12 CLOSE= 16.83 US\$

Yamana Gold (NYSE:AUY); gold: US\$ Also trade TSX:YRI

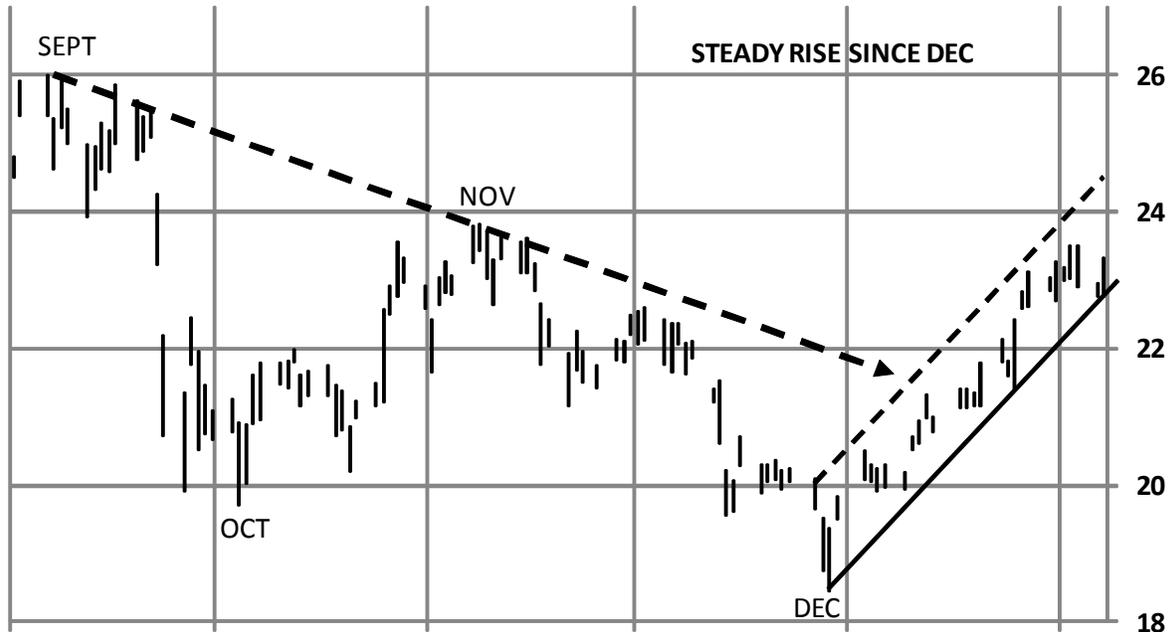

New Recom:	Sold all for a 15% average gain! :) Looking to buy back in.
Comment:	Bullish rise! AUY reached the top side of the Oct upchannel where we sold via alert for a 15% gain! AUY resisted at the old highs below 18 and has slipped below the 17 level. AUY is strong above its Dec upchannel at 16. We'll wait for a decline that holds at the bottom side of the Oct upchannel near 15 to buy again.

B2GOLD CORP. (BTO.TO) 2/7/12 CLOSE= 3.91 CAD\$

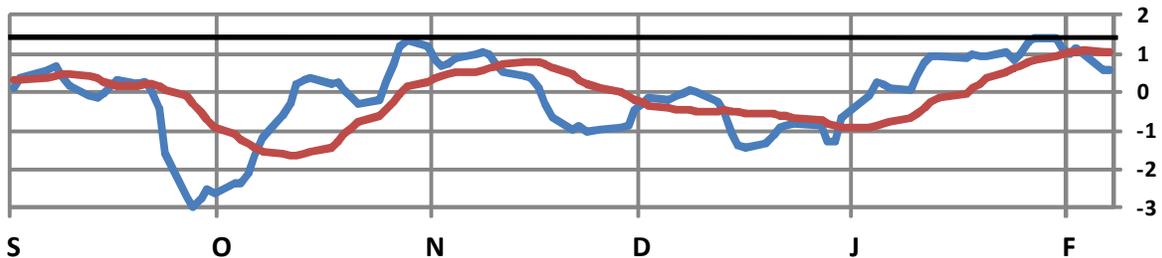

New Recom:	Last week sold via alert for an average gain of 24%! :) Looking to buy back in.
Comment:	Solid rise! BTO.TO rose with strength to its Nov highs where it found some resistance. Spinner formed a top at overbought levels and has started to decline, crossing below its MT MA which is a sign of weakness. Moreover, BTO.TO could decline to its Dec upchannel at 3.15, and still be bullish. We'll be looking to buy after a decline that holds above Dec uptrend.

CENTRAL FUND OF CANADA (CEF) 2/7/12 CLOSE= 23.2 CAD\$

SPINNER (3, 16, 16)

DECLINING FROM OVERBOUGHT

New Recom:

Looking to buy. Wait for a dip that holds above 20 to buy.

Comment:

We're adding CEF to the lineup. CEF is a Canadian based fund whose sole purpose is to buy gold and silver. 95% of the company's assets are in gold and silver bullion. You're able to trade it on the NYSE under the symbol CEF or on the TSX under the symbol CEF.A. It has been rising strongly within its Dec upchannel. However, CEF is at overbought levels and we'll wait for weakness to buy.

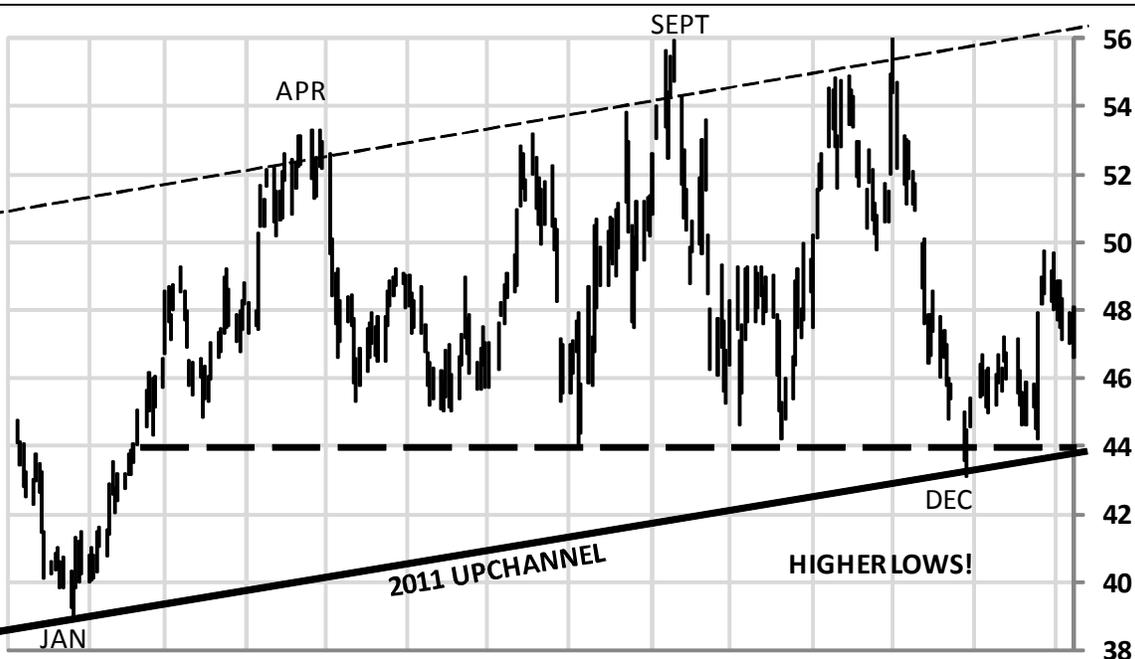

ELDORADO GOLD (ELD.TO) 2/7/12 CLOSE= 14.41 CAD\$

Eldorado Gold (TSX:ELD) Also traded in NYSE:EGO, ASX:EAU

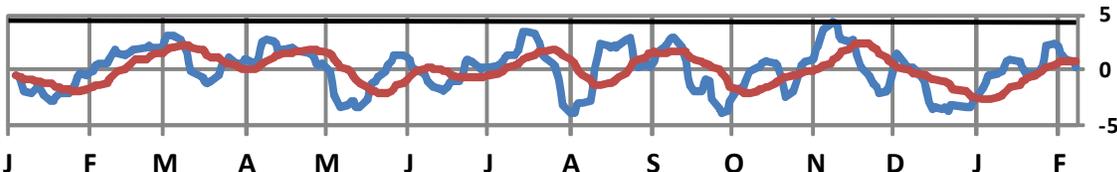

Open trades:	Long at:	Entry Level: 19.25 (Aug-31-11), 18 (Sept-28-11), 17.30 (Oct-3-11) 17.50 (Nov-23-11), 17.30 (Nov-30-11), 15 (Dec-14-11) and 13.90 (Dec-22-11).
	Profit Target	17.50 &/or 18.50
	Stop:	ST & MT: 2dc below 13.
New Recom:	Keep your positions. Sell half at 16 for a loss.	
Comment:	Waiting to get out the best way possible. ELD.TO broke above its 25 day MA but yesterday fell back below it. Has strong resistance below its 75 day MA and continues to look weak below 15. On the upside, ELD.TO has intermediate support above 13 and as long as it holds above this level its bottoming and poised to rise.	

GOLDCORP (G.TO) 2/7/12 CLOSE= 47.53 CAD\$

SPINNER (3. 16. 16)

HAS ROOM TO RISE

GoldCorp (TSX: G) Also traded in NYSE: GG

Open trades:	Long at:	Entry Level: 45.65 (Dec-22-11).
	Stop:	All: 2dc below 44
	Profit targets:	50 &/or 53

New Recom: Keep your position. Sell half at each profit target.

Comment: We're seeing higher lows since Dec as G.TO bounces. Has been rising from its intermediate support at the 44 level. Continues to hold above its 25 day MA showing some strength. Indicators have not reached overbought levels and are showing us G.TO still has room to rise further. However, its found some resistance below both 50 and its 75 day MA. If G.TO is unable to break above these levels on a 2dc, we could see it decline to the 44 level once again.

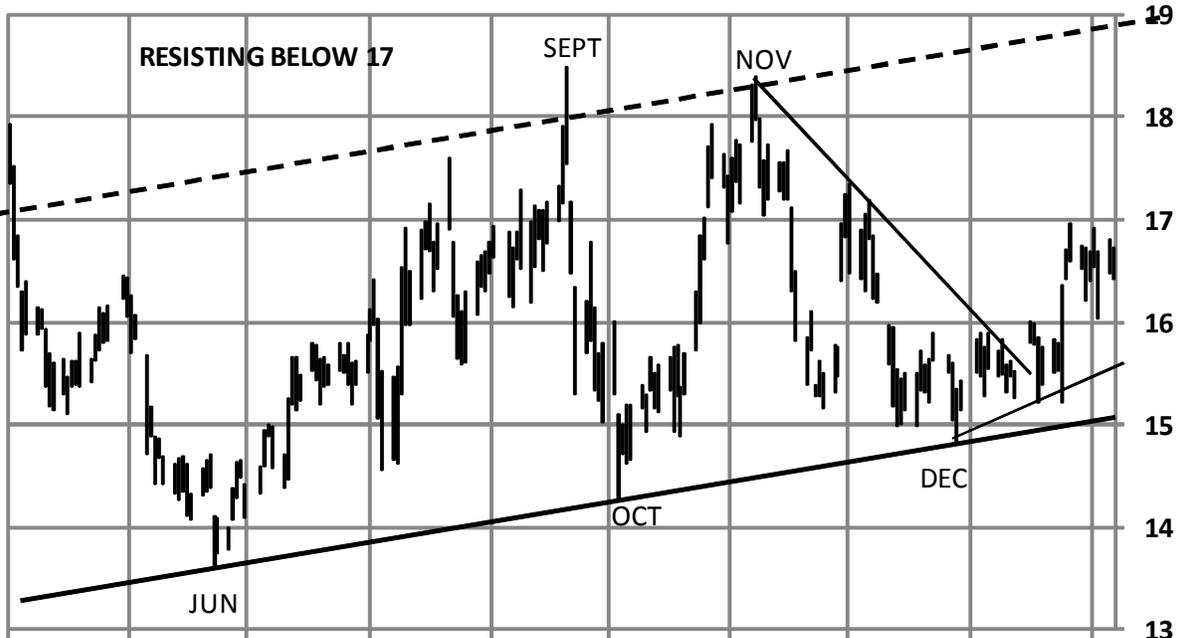

MKT VECTORS JR. GOLD MINERS (GDXJ) 2/7/12 CLOSE= 29.2 US\$

Junior Gold Miners ETF (GDXJ)

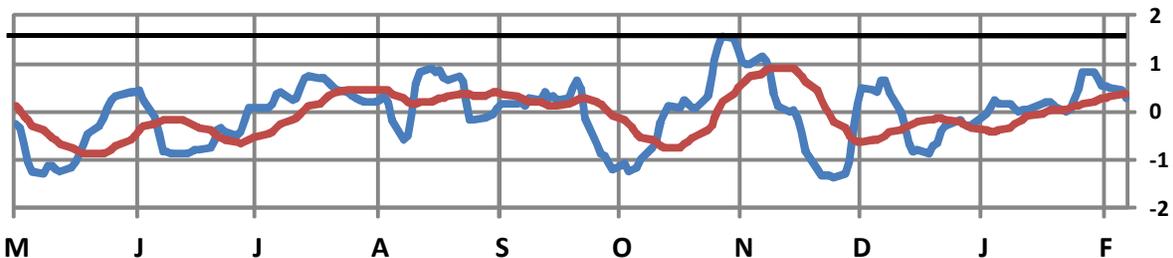

Open trades:	Long at:	Gamblers bought at 29.40 (Nov-30-11). Sold half at 30.
	Stop:	ST & MT: 2dc below 25
	Profit targets:	30 (reached!) &/or 33 (adjusted)
New Recom:	Sell the rest of your position at 33.	
Comment:	Junior gold miners have been rising since Dec with the stock market as investors seek riskier investments. GDXJ broke clearly above its 75 day MA and continues to hold above it. Indicators have topped at overbought levels and have started to decline. Spinner crossed below its MT MA showing weakness. If GDXJ can hold above its Dec uptrend on weakness, we'll likely see it rise to test its Nov highs at 33.50.	

GOLD FIELDS Ltd. (GFI) 2/7/12 CLOSE= 16.59 US\$

SPINNER (3, 16, 16)

HOLDING ABOVE MT MA

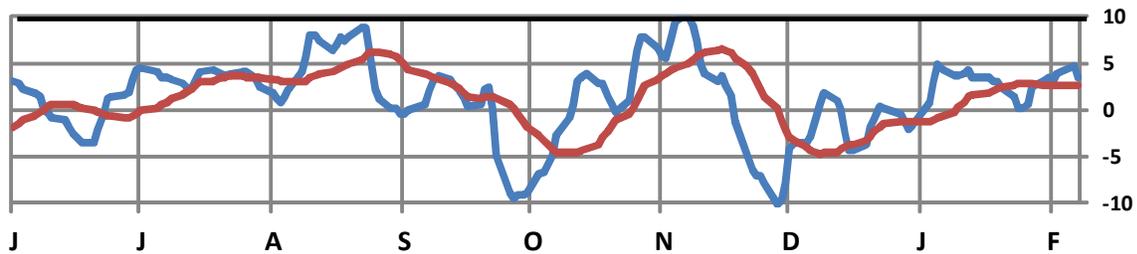

Open Positions	Entry Level	15.40 (Nov-23-11) and 15.40 (Jan-19-12).
	Stops:	ST & MT: 2dc below 14.75
	Profit Targets	17 &/or 18.50.
New Recom:	Sell the rest at 17. (Sold half at 17.15 for a 11% gain on Dec-7-11).	
Comment	Holding strong! GFI is holding well above its 75 day MA. GFI is very strong above its Dec uptrend above 15.90. Spinner holding near MT MA with room to rise further. Other indicators showing us GFI has room to continue rising. However, the 17 level is becoming an important resistance. Sell all when GFI reaches its first profit target.	

RANDGOLD RESOURCES Ltd. (GOLD) 2/7/12 CLOSE= 114.64 US\$

SPINNER (3, 16, 16)

ROOM TO RISE FURTHER!

Open Positions	Entry Level	105.5 (Nov-30-11) Sold half at 116 for a 10% gain :)
	Stop	ST & MT: 2dc below 96.
	Profit Target	115 (reached!) &/or 125
New Recom	Sell the rest above 120.	
Comment:	Resisted below the Nov highs! Has been rising with strength but declined after reaching Nov highs on heavy profit taking. GOLD is very strong above 110. Spinner above MT MA with room to rise further. Keep your positions and look to sell the rest of your position above 120.	

NEW GOLD (NGD) 2/7/12 CLOSE= 11.980 US\$

New Gold Inc. (NYSE/AMEX:NGD) Also traded in TSX:NGD

New Recom:	Sold the rest at 12 for an average 17% gain :)
Comment:	NGD rose with strength to our second profit target. We got out a day early but still managed to bank good profits! NGD has found some resistance below the Oct/Nov highs below 12.80 as Spinner reached overbought levels. RSI reached a 5+ Mo high. This tells us that there's now more downside risk than upside potential for NGD. We'll stay out for now and wait for weakness to buy again.

S&P 500 INDEX MAR 2012 (SPH12) 2/7/12 CLOSE= 1344.7

New Recom: **Gamblers sold short at 1315 but got stopped out on Friday after a 2dc above 1320. If you did not cover your shorts on Monday as per our stop loss, keep your positions. If out, stay out.**

Comment: S&P 500 continues to rise as it reached a 6+ Mo closing high yesterday! Has been rising with strength since October and continues to look strong. S&P 500 is very strong above its 75 day MA at the 1270 level. However, S&P 500 is due for a correction and a decline to its 75 day MA would be normal yet still remain bullish. RSI continues to linger at overbought levels as Spinner remains below its MT MA. Moreover, the Volatility Index (VIX) has formed a downside wedge just as the upside wedge in S&P 500 continues to gain strength, telling us that see a decline or correction is likely.

Subscribers can obtain free online chart updates for all gold shares in *GCRU* via: www.bigcharts.com. To view Canadian stks please use CA as prefix (ie, to view Agnico Eagle (Toronto) you must use CA:AEM).

Note: U should NOT feel our recommended prices are set in concrete. If mkts suddenly feel hot or cold to U, or dramatic news occurs, U can buy or sell, or stop at slightly higher or slightly lower prices. It also hinges on your experience level. Some people can use our prices as guides & know when they can take bigger risks.

Spinner: Spinner is an in-house momentum indicator (not always shown on charts). Momentum indicators use the rate of change in price to determine predominant energy flows. Spinner trading signals are generated when the faster timing line crosses above or below the slower confirming line. Upside crosses in the lower range of positive territory offer the most reliable signals for longs; downside crosses in the top range of negative territory for shorts. Avoid trading against the timing line, ie, buying/selling if the timing line is in corrective mode (against direction of trade) unless the confirming line is positioning for a new 'confirming cycle'. It's important to always be aware of location, direction & cycling phase of the confirming line. Spinner signals are more effective in trending mkt's than in trading ranges where indicators such as Stochastics & Williams %R should be used.
