GOLD: COMING ALIVE

Well, it's finally starting to happen...

Gold jumped up above \$1600 this week on **safe haven buying, hitting a 3 week high last night**. This is the first real bullish action we've seen in months, and there's more...

As you'll see, our technical indicators are clearly reinforcing the bullish price action. The Spinners are rising, indicating prices are headed higher. The advance/decline line also broke out and the moving averages are looking good.

Gold was ripe and overdue for a rise. As it turned out, events in Cyprus ended up being the trigger.

Even though Cyprus is a small country, it again moved the euro crisis to the front burner. Briefly, here's the story...

Over the weekend the EU agreed to a rescue plan for Cyprus and the President announced a proposed levy on bank deposits. This caused a run on the banks, increasing fears that it could spread to other European banks.

This, in turn, sent investors running for safe havens. And when push came to shove, gold emerged as the safe haven of choice.

For now, a bank holiday in Cyprus has been extended until week's end. **Cyprus is rejecting this unprecedented tax on bank deposits, and tensions remain high.**

This alone will keep upward pressure on the

gold price. It'll give gold the extra push it needs to get going in a renewed rise that's technically ready to go.

Meanwhile, **on the monetary front, the Fed continues to dictate**, like it's been doing since the start of the financial crisis. The current concern is if Bernanke will keep the stimulus going, or slow it down somewhat.

With the economy now showing real signs of improvement, our guess is that the Fed will stay on the same path. If so, that'll provide a good foundation for gold because it'll fuel inflation concerns.

Gold demand also remains strong, both from retail buyers and central banks. And this too contributes to a stronger foundation.

The stock market has been getting a boost from the Fed induced optimism of a better economy. The U.S. market benefited the most this year but the uncertainty surrounding Cyprus is putting pressure on the U.S. and global stock markets,... and at a time when they've risen too far too fast.

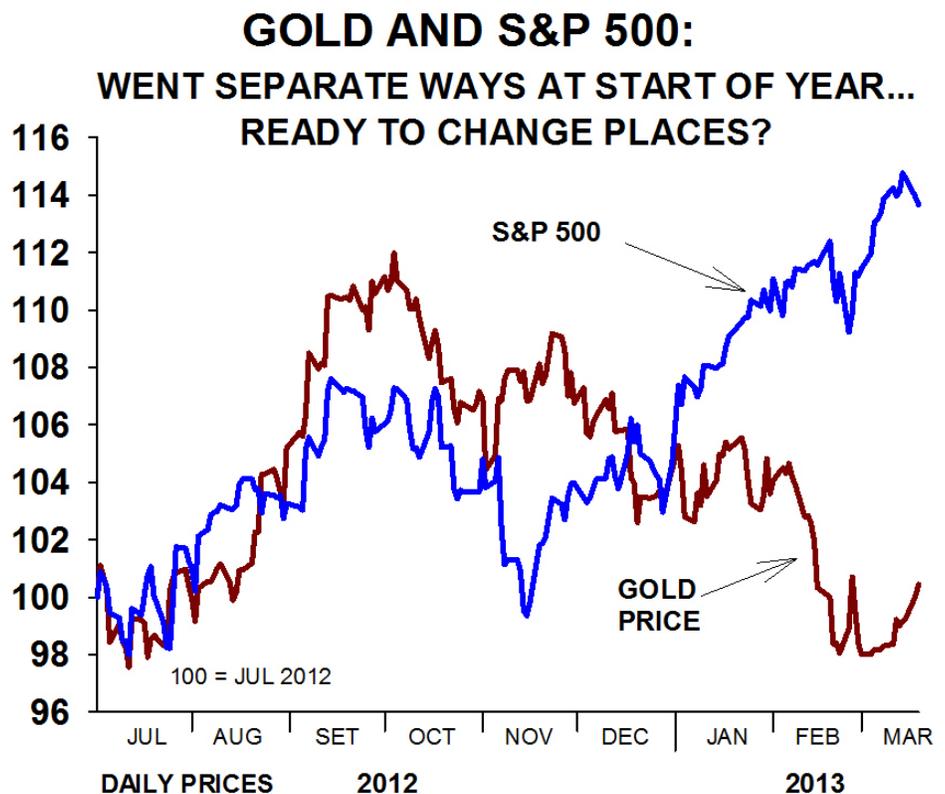

The chart shows that gold may now be changing places with the stock market.

Notice how they moved together since last July, but come the start of this year, stocks took off while gold fell back. The Dow Industrials reached a record high while gold tumbled.

But now some reality is setting in.

With the eurozone crisis back in the headlines, **it's hurting the outlook for further global growth**, which in turn hurt the resource sector this week, pushing copper and the base metals down.

But it gave a boost to safe havens.

If Bernanke reconfirms the Fed's loose monetary policy, gold will look even better. This gap between gold and the stock market will then narrow favoring gold.

It's already started as gold rose above its 5 week moving average for the first time in 6 weeks. As long as it now stays above this MA at \$1590, gold is poised to bounce up further, to possibly the \$1660 level as a first stop. The \$1800 level will be the bigger resistance to overcome before a stronger intermediate rise develops.

Gold shares and silver are very quiet. It looks like they're **building a ST bottom.**

The HUI gold bugs index is holding above its key 350 support, and the longer it stays above or near this level, the more likely a bottom is finally here. HUI above 370 would be the start of brighter times for gold shares.

Silver has been bottoming for 4 weeks now, and it's stabilizing above \$28.40. A renewed rise will be getting started above \$29.40. **Silver is being held back by the resource sector, but it still looks like a coil ready to spring.**

Palladium and platinum are also feeling the heat from the resource sector for now, but palladium still looks very good. **The dollar index is holding up well in spite of a stronger gold price, but its strength is mainly due to a weakening euro.** It would be vulnerable below 82.

Our Strategy this week is....

We have a good position and strategy set up in gold, silver and gold and silver shares. We picked up more shares in our stronger gold stocks which are Yamana (AUY), B2 Gold (BTO.TO) and Agnico Eagle Mines (AEM), as well as Silver Wheaton (SLW). **This market is undervalued, and we continue to tweak our positions each week waiting for the train to take off.** And indeed our gold shares are looking better... they're some of the strongest shares and several are bouncing up nicely.

Look over the charts on the following pages for our individual guidelines and strategy for each one.

If it's Wednesday, it must be GCRU!

Our warmest wishes and good trading,

The Adens, Pam, Mary Anne and Omar

New Recom:	Keep your positions.

Gold is showing strength. It continues to rise from its key support level for a 4th straight session, breaking clearly above its 25 day MA. Out of the past 12 sessions, gold has closed higher than the previous day on 10 occasions, one day was unchanged and one down day for the longest rising streak in over a year! Spinner broke clearly above the zero line and into bullish territory telling us more upside is likely. Watch gold's next key resistance near 1660, where the 75 day MA and the Oct/Nov downtrend converge. If gold breaks above this level, it'll confirm strength and it would be poised to rise to the 1800 level. However, if gold resists at this level, it'll show the weakness since Oct continues and a decline to its Mar uptrend would be likely. Keep your positions as gold is strong above 1590, the 25 day MA. We still have a small short position in place for

Silver is creeping up from the Feb lows as Spinner pierced the zero line showing strength and upside potential. Silver looks ready to move. However, it's resisting at its 25 day MA telling us that its not out of the woods just yet. Silver must break above 29.40 on a 2dc to confirm recent strength and rise to its next resistance, the Nov downtrend near 31. A break above this level would push silver to test its key resistance near 33, the Sept/Oct/Nov downtrend. However, if silver continues to resist below 29, it'll show weakness and a decline to test its first support at 28 would be likely. A break below this level would confirm weakness and a decline to silver's key support at 26 would be possible. Keep your silver, we'll be looking for a breakout and rise to the Sept/Oct/Nov downtrend near 33 to sell some for a profit. Keeping a small short position for insurance.

HUI GOLD BUGS INDEX (HUI) 3/19/13 CLOSE= 354.23

HUI continues to move upward as it starts to form a Mar uptrend showing strength. Moreover, HUI holding above its intermediate support at 350 confirming strength. However, HUI must break above its first key resistance at the 370 level where the mid channel line and the 25 day MA are converging. A break above this convergence would confirm recent strength and a rise to the top side of the Sept/Oct downchannel near 425 would be likely. HUI must break above this level to confirm a reversal that could push HUI to the Sept/Oct highs. On the downside, keep an eye on 350, HUI's 3 year H&S NL & support. If HUI breaks below this level on a 3dc we'd see a strong bear and a decline to the 250 level would be likely. Moreover, Spinner continues to resist below the zero line showing some vulnerability. Overall, gold shares are looking good, but not clearly out of the woods just yet. We'll be looking to buy bargains and wait for a rise to the top side of the Sept/Oct downtrend to sell partial positions at a profit.

ADEN GOLD STOCKS ADV/DEC LINE 3/19/13 CLOSE=4914

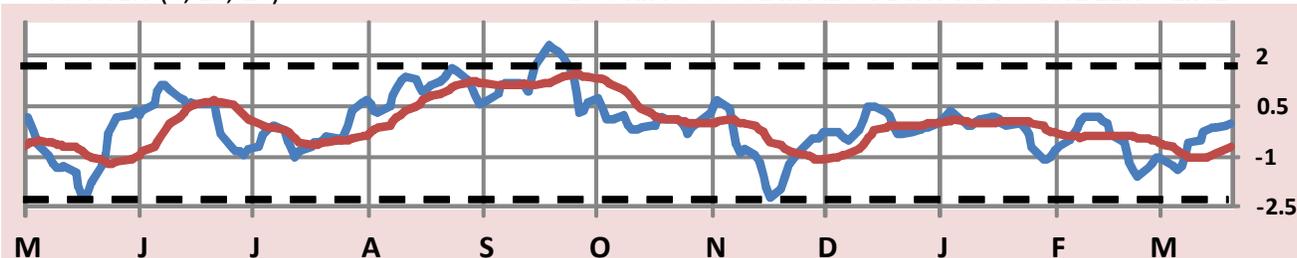

Higher lows! The Adv/Dec Line continues to rise from the bottom side of the 2012 downchannel, confirming Jan downtrend breakout seen last week. Spinner backs up a bullish scenario as it breaks above the zero line for the first time in 5 mo! Keep a close eye on Spinner to see if it stays above zero and its MT MA. All good signs of strength. However, the Adv/Dec Line is not out of the woods yet as it must break above its 75 day MA on a 2dc above 5000 to see a stronger rise take hold that could take it to retest its 2012 downtrend at 5150. If the Adv/Dec Line fails to break above its 75 day MA, it'll confirm weakness and a decline to the bottom side of the 2012 downchannel near 4870 would be likely. For now, keep your gold shares as they continue to bottom. We'll be looking to take quick partial profits at key resistance levels.

ADEN SILVER SHARE INDEX (ASSI) 3/19/13 CLOSE= 16.156

SPINNER (3, 16, 16)

LOOKING GOOD... ABOVE MT MA & THE ZERO LINE

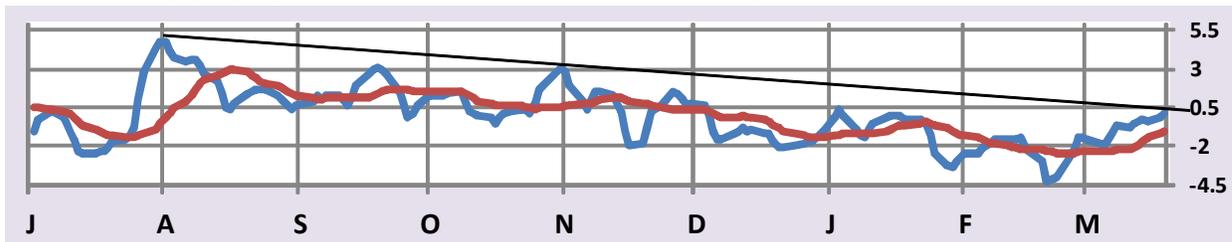

ASSI held firmly above its key intermediate support, the May/Jul uptrend at 15. ASSI resuming its rise as Spinner is breaking bullish. However, to see real strength, ASSI must break above 18, where the Oct/Feb downtrend and the 75 day MA are converging. Otherwise, if ASSI resists at the Oct/Feb downtrend, it'll show weakness and it'd be poised to decline to test its key support, the May/Jul uptrend at 15. Silver shares are bombed out and poised for a bounce. Take advantage of upcoming ST strength.

Stop: ST & MT: 2dc below 38

Profit targets: 60 &/or 70

New Recom **Keep your position.**

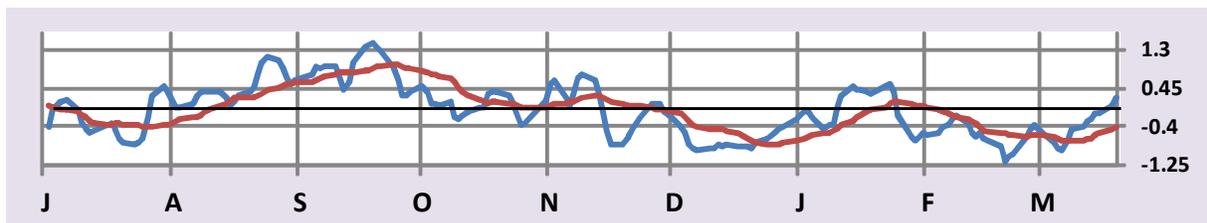

AEM continues to rise from the lows, peeking above its 25 day MA for the first time since early Jan as Spinner approaches its 7 mo downtrend & resistance. Watch for a clear AEM break above its 25 day MA (40.50) confirmed by Spinner breakout above its 7 mo downtrend & resistance to confirm strength that could push AEM to test the Nov/Jan downtrend near 46. However, if AEM fails to break clearly above its 25 day MA, it would show ST weakness and it could fall back to its Jul/Mar uptrend & support. A break below Mar lows would be bearish.

Stop:	2dc below 13.80.
Profit Target:	16.50 (adjusted), 18 & 20.50.
New Recom:	If not in, buy below 15. Sell a third at first profit target.

AUY continued to rise breaking clearly above its 25 day MA on higher-than-average volume confirming ST strength seen last week. Spinner in bullish territory as it broke above the zero line confirming strength and showing upside potential. AUY is poised to retest the Nov/Jan downtrend near 16.50, our first profit target. If AUY breaks above this level, we could see renewed strength and a rise to the Jan highs near 18 would be likely. On the downside, keep an eye on the Nov/Jan downtrend, if AUY resists at this level, it could decline back to the Mar uptrend near 14.50. Final support at 13.80.

Stop:	2dc below 2.75
Profit Target:	3.85 & 4.25 (adjusted).
New Recom:	Keep your positions. If not in, buy below 3.15. Sell half at first profit target.

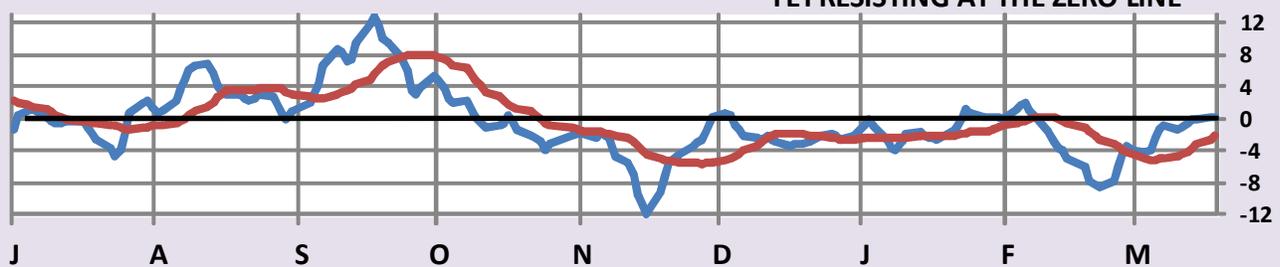

BTO.TO continues to rise with strength, breaking above its 25 day MA on high volume. Spinner in bullish territory with room to continue rising. This tells us BTO.TO is poised to retest the Sept/Oct/Jan downtrend near 3.85. A break above this level would show a stronger rise could test the Sept highs. However, if BTO.TO resists below the Sept/Oct/Jan downtrend, it would show weakness and a decline to its Mar uptrend would be possible. Keep your positions. Sell some at our first profit target.

Entry Level 96 (Jan-4-13), 94.50 (Jan-7-13), 91.50 (Feb-11-13).

Profit Target 107 & 120

New Recom **Sell above 95.**

Randgold continues to bottom above its 15 mo support. However, GOLD's been unable to break above its 25 day MA as Spinner resists at the zero line. This tells us overall weakness continues to dominate this gold share. However, it's likely that GOLD will rise with the rest of the sector. Keep your positions for now. Sell near the Oct/Nov downtrend, above 95.

NEW GOLD (NGD) 3/19/13 CLOSE= 9.26 US\$

Profit Target	11, 12 & 13 (adjusted).
Stop:	2dc below 8.50.
New Recom:	Keep your positions. If not in buy at mkt, up to 9.30. Sell half at 11.

NGD found some resistance below 10 that pushed it to the lower 9s forming a Cup & Handle with an upside target of 12. NGD must break above 10 on a 2dc to see formation breakout that could be followed by a rise to the target near 12. Spinner bullish with room to continue rising. On the downside, if NGD fails to break above 10 on a 2dc, it could fall back to its support near 8.50.

SILVER WHEATON CORP (SLW) 3/19/13 CLOSE= 30.46 US\$

Silver Wheaton (NYSE: SLW) Also traded in TSX:SLW.TO

Long at:	31 (Mar-13-13), 30.50 (Mar-14-13).
Stop:	2dc below 30.
Profit targets:	36, 40 & 47
New Recom:	If not in, buy up to 31. Sell half at first profit target.

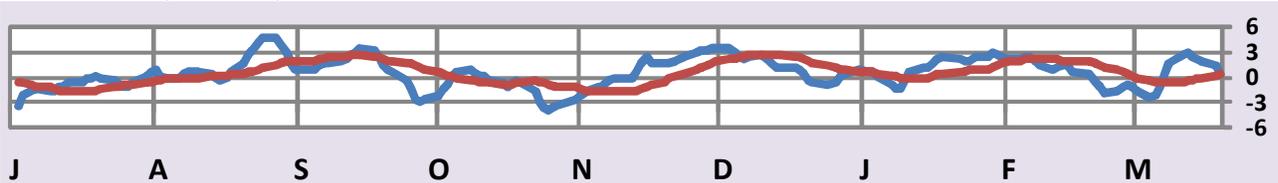

SLW continues to base above 30, the bottom side of the Nov/Feb downchannel. Spinner resisting below the zero line showing some weakness. If SLW holds above the 30 level, we could see it rise once again to test the Nov/Feb downtrend near 36. However, if it breaks below it, we could see it decline to possibly the mid 20s. Keep your position for now and sell at first profit target.

ETFS Physical Palladium Shares (PALL) 3/19/13 CLOSE= 72.27

Open Trades	Long at:	Some may have bought at 70.50 (Jan-24-13), 71.90 (Feb-28-13).
	Stop:	2dc below 62.
	Profit Target	80 & 87
New Recom:	Keep your positions. Buy more if not in up to 72.	

PALL declined sharply with the resource sector. However, PALL managed to stay above both, its 75 day MA and the Oct/Jan uptrend. Spinner declining but still above its MT MA and the zero line. This tells us despite recent weakness, there's still good upside potential for PALL. On the downside, keep an eye on 70. A break below it would be a first sign of weakness that could push PALL to the Jul/Oct uptrend near 63. A break below this level would be bearish.

SPDR Dow Jones Industrial Average (DIA) -NYSEArca

Long at:	143 (Mar-7-13)
Stop:	2dc below 137
Profit Target:	150
New Recom:	Keep your positions. Buy on weakness near 138.

DIA continues to hold near the highs showing good, solid strength. DIA is strong above 136 and very strong above 141, its steeper Dec uptrend as well as its 75 and 25 day MA, respectively. On the downside, Spinner showing signs of a top, however, in an overbought area and is starting to decline, testing its MT MA. DIA could fall to 142 and still be within the steeper upchannel... or 138 for a sharper ST correction. Use weakness to buy.

Crude peeked above both its 25 and 75 day MAs but failed to stay above these levels showing some weakness. Spinner bullish above MT MA and zero line showing good upside potential. Moreover, crude is strong above its Jun/Mar uptrend near 90. On the downside, watch for the 90 level. A break below 90 on a 2dc would confirm weakness and a decline to the mid to lower 80s would be likely. Keep your positions.

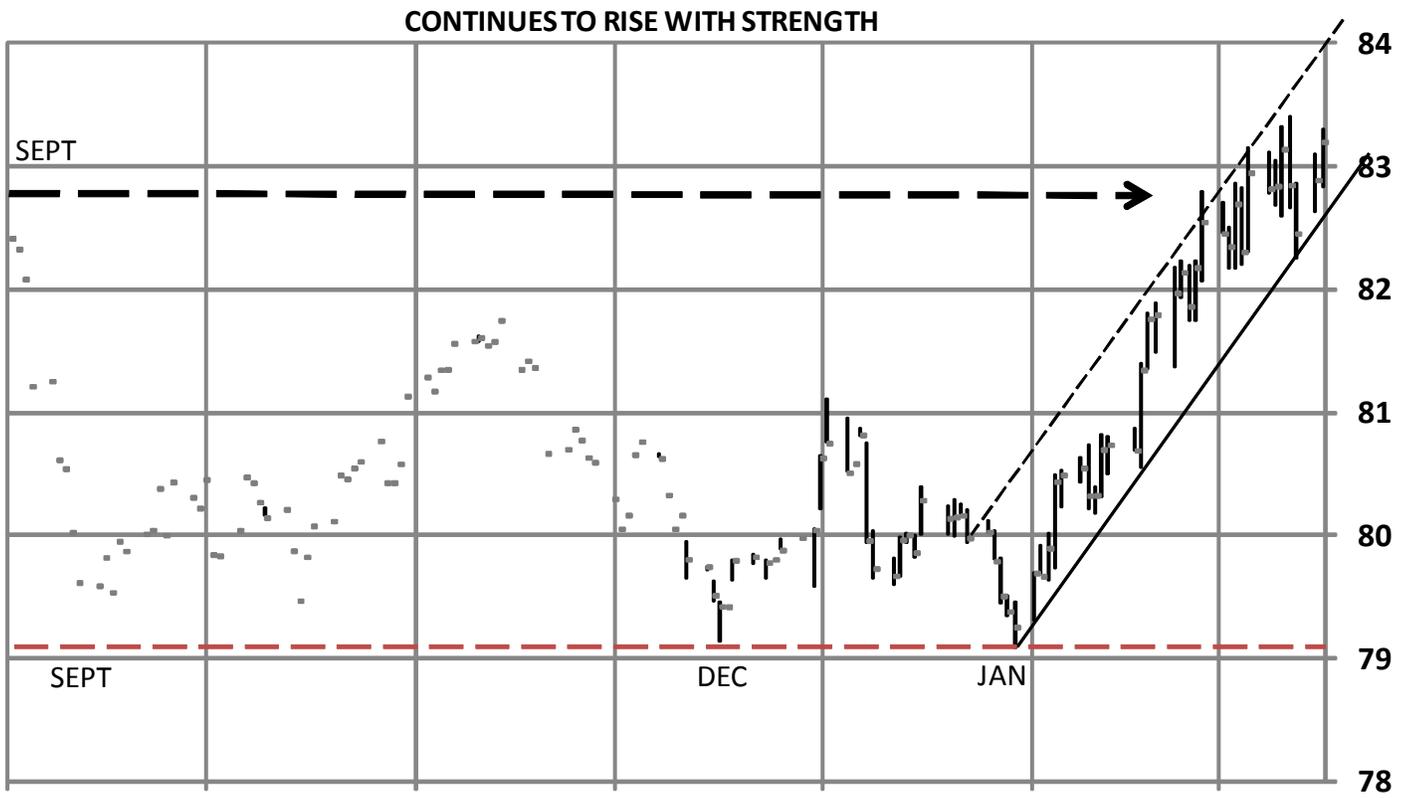

S&P 500 INDEX JUNE 2013 (SPM13) 3/19/13 CLOSE= 1542.2

New Recom: **Stay out for now.**

S&P 500 has found some resistance near the record highs as it forms a top near the upper side of the Jun/Nov upchannel. Spinner showing a top forming at extreme overbought and declining, testing its MT MA. However, Spinner is still bullish above the zero line. On the downside, watch the Dec uptrend. A break below 1525 would be a first sign of weakness that could push S&P to the Jun/Nov uptrend near 1425. A break below this level would confirm weakness and a decline to the Nov lows near 1325 would be likely.

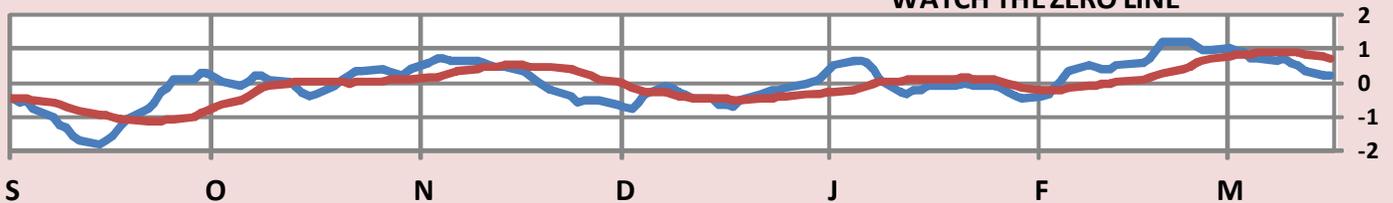

U.S. DOLLAR INDEX JUNE 2013 (DXM13) 3/19/13 CLOSE= 83.211

SPINNER (3, 16, 16)

DECLINED BELOW MT MA...

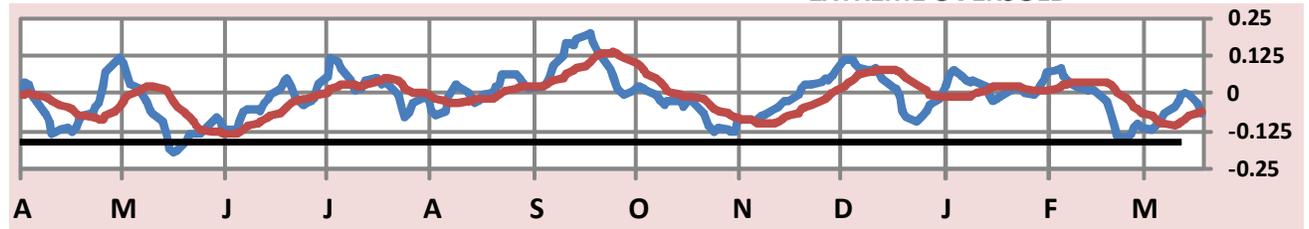

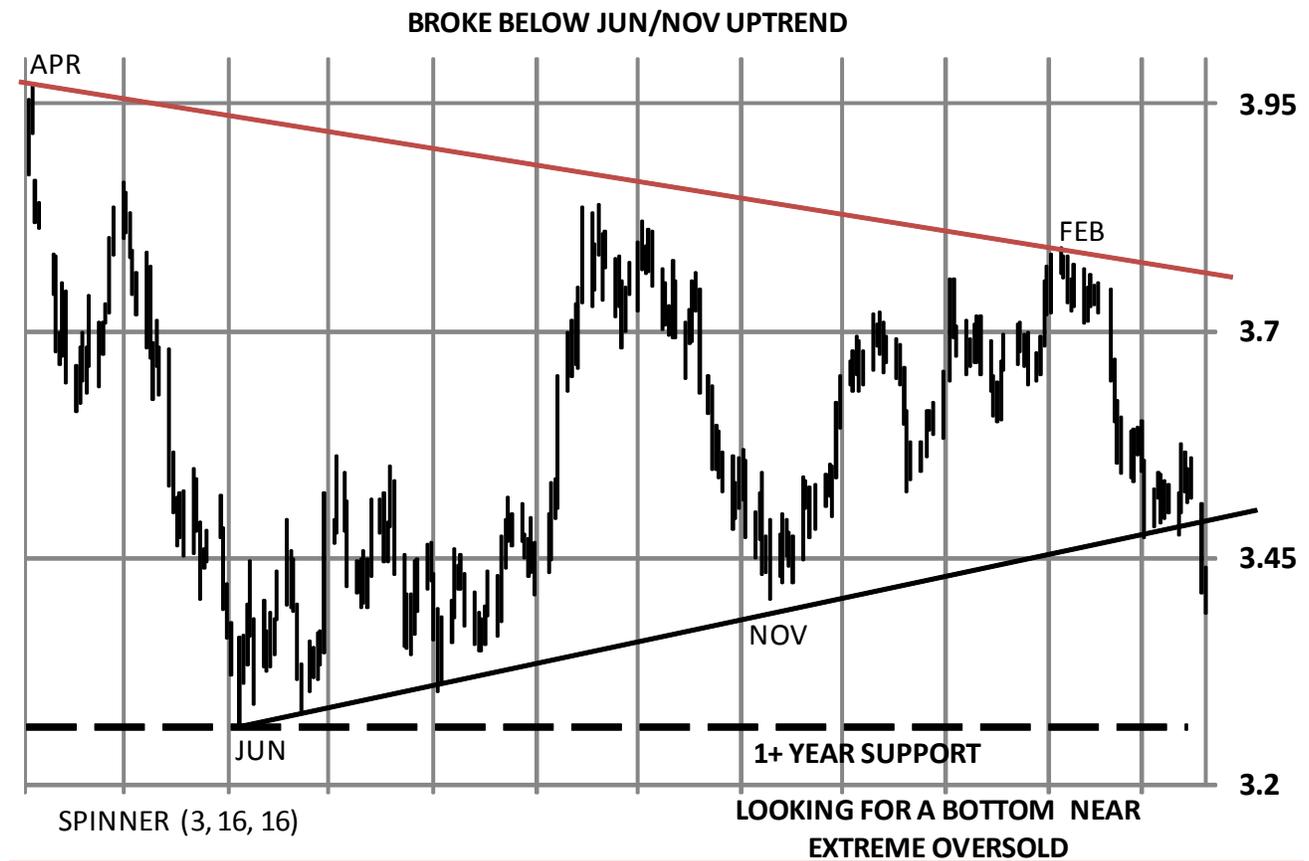

WATCH THE ZERO LINE

New Recom: **You are out.**

The US Dollar continues to rise within its steep Jan uptrend. But it looks topy at current levels. Spinner looks like a top may be forming, especially if zero line is broken. Unless the dollar rises to the top side of the Jan upchannel near 84, it'll likely fall back to test its Jan uptrend. A break below this uptrend would be a first sign of weakness that could be followed by a decline to the dollars main support near 79... if 82 is clearly broken.

COPPER MAY 2013 (HGK13) 3/19/13 CLOSE= 3.4055

Long at:	3.58 (Oct-23-12), 3.50 (Nov-23-12), 3.50 (Nov-28-12), 3.68 (Feb-19-13).
Stop:	2dc below 3.45.
Profit Target	3.90 & 4.
New Recom:	Sell at best price possible.

Copper broke below its Jun/Nov uptrend & support on a 2dc below 3.45 triggering our sell signal and reaffirming that weakness continues to dominate. Spinner formed a top below the zero line confirming weakness. Copper's next support and likely downside target are the Jun lows near 3.30. On the upside, copper must break above the Apr/Feb downtrend on a 2dc above 3.75 to see a reversal and a rise to the Apr highs would be likely. We recommend cutting losses short and selling at mkt as downside risk outweighs upside potential.

Quoting *GCRU* is permitted provided *GCRU* name, website address & subscription price are given.

All charts in *GCRU* are daily prices.

Fax subscribers please note this week's password to access *GCRU* daily edition via our website is: (*goldbottom*).

Subscribers can obtain free online chart updates for all gold shares in *GCRU* via: www.bigcharts.com. To view Canadian stks please use CA as prefix (ie, to view Agnico Eagle (Toronto) you must use CA:AEM).

Note: U should NOT feel our recommended prices are set in concrete. If mkts suddenly feel hot or cold to U, or dramatic news occurs, U can buy or sell, or stop at slightly higher or slightly lower prices. It also hinges on your experience level. Some people can use our prices as guides & know when they can take bigger risks.

Spinner: Spinner is an in-house momentum indicator (not always shown on charts). Momentum indicators use the rate of change in price to determine predominant energy flows. Spinner trading signals are generated when the faster timing line crosses above or below the slower confirming line. Upside crosses in the lower range of positive territory offer the most reliable signals for longs; downside crosses in the top range of negative territory for shorts. Avoid trading against the timing line, ie, buying/selling if the timing line is in corrective mode (against direction of trade) unless the confirming line is positioning for a new 'confirming cycle'. It's important to always be aware of location, direction & cycling phase of the confirming line. Spinner signals are more effective in trending mkt's than in trading ranges where indicators such as Stochastics & Williams %R should be used.
