Gold Charts R Us

●●●● GCRU #487 on March 21st, 2012 (in its 11th year)

LOOKING OVER THE VALLEY

The stock and commodity markets declined, while pressure remained on the gold and silver markets....and their shares.

The **recent optimism** surrounding the global economy went down a notch as China's slowing economy came back to affect the markets. Plus, NY Fed President Dudley added to this sentiment as he warns that the U.S. **economy is not out of the woods** in terms of generating a strong sustainable economy.

China's slowing economy is not new news. This has been going on for a while, and its lower forecast from 8% to 7.50% is, by all means, not a collapse.

Meanwhile, the oil market fell when Saudi Arabia reassured the world that they have the extra capacity to avoid shortages. With tension growing in the Middle East, this brought calm to the crude price.

Gold's downward correction since end-February is underway. But we continue to see this as the market giving us a good, better price to buy new positions.

STOCK MARKET: 'CATCHING UP' TO GOLD RISE

That was reinforced with the Nobel prize winning economist, Robert Mundell, **reaffirming reality that political competition for votes**, together with the lack of fiscal discipline is keeping the U.S. economy on the road towards solvency issues.

Plus, as we all watch long term interest rates soar to six month highs, the Fed must be concerned. It was only a while ago when Bernanke restated that he wants to keep interest rates near record lows until 2014.

So how will he keep interest rates low? **Gold came under pressure when Bernanke suggested that a QE3 type of program isn't necessary, but it looks more like Dudley is paving the way for another program.**

The stock market also looks like a high is near. The VIX index is a fear index and it's at low levels that normally coincide with peaks in the stock market. This is happening while people are loving to hate gold.

The chart shows an interesting perspective on the relationship between gold and stock market. Here you'll see the gold price and the S&P500 indexed to 100 since the start of the rise following the 2008 financial meltdown.

Note that both moved up in lockstep in 2009, but their strength parted ways in 2010. **Gold rose more than stocks until its peak in September 2011, while the stock market fell to its October lows.**The ratio clearly showed that this relationship was out of whack then. This is when the stock market started to rise while gold came down. Their relationship has been normalizing since then, as **the S&P500 catches up to the strong gold price.**

The ratio trend, however, still favors gold and it's coming into a good buying area.

Likewise, comparing gold shares to the S&P500. The next chart shows this relationship even sharper. Note that gold shares clearly outperformed the stock market in 2010 up to last September's peak.

But now with gold shares coming down while the stock market has been rising over the last five months, it's caused their relationship to fall to a clear low level.

In other words, their relationship is now out of whack. Gold shares are at a clear low area compared to the S&P, the most in over two years.

Gold and gold shares are looking over the valley right now and we should be positioned and ready for a bounce up when it arrives.....

GOLD SHARES: NEAR EXTREME LOWS VS STOCK MARKET

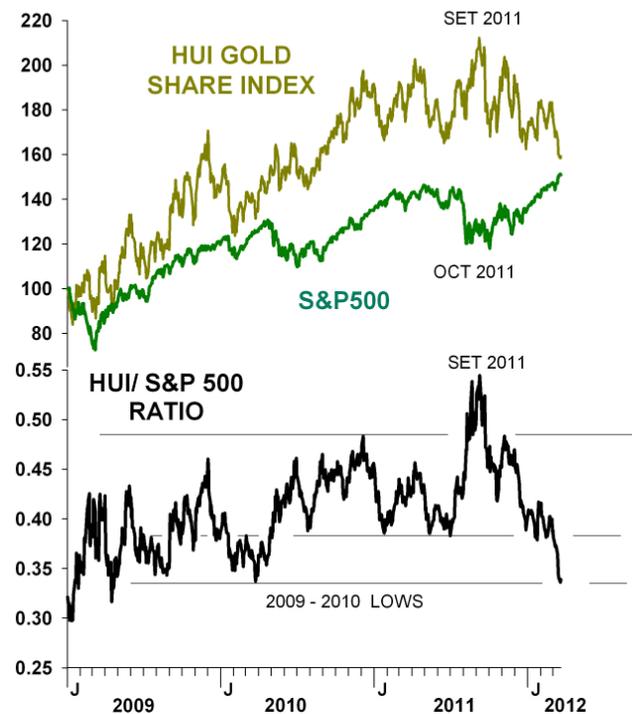

CHART TALK

Since the gold decline began 3 wks ago, it's managed to hold near the \$1650 level, which is \$100.00 higher than the Dec 29th, 2011 lows. An approximate 7% rise from close to close even after Big Ben has come out twice saying that there will be no further stimulus in the form of asset purchases as the economy is showing signs of improvement.

As we've said many times in these pages, despite speculation of an improving economy, **the reality is that the economy is far from showing sustainable improvement.**

Don't forget, we're in an election year which is tricky. You can be certain that the US government will do everything in its power to maintain a positive outlook throughout the rest of the year, at least until November, when the Presidential elections are over.

This is ultimately the fundamental reason why gold is not in a bubble and it'll likely continue moving within its bullish mega uptrend. Corrections are normal within an uptrend and we'll continue to recommend buying on weakness as its not

very often that we're able to buy gold at a discount. Same goes for gold shares as you'll see ahead.

Our indicators are showing that gold has reached, or is reaching an intermediate bottom at the \$1650 to \$1600s level. Gold has been hugging the bottom side of its Bollinger Band for almost the past 3+ weeks while its Relative Strength Index (RSI) has started to rise from oversold levels when it reached the 23 level last Wednesday.

Moreover, our in house Spinner is bottoming at an oversold area. It's important to mention, however, that our Spinner has not formed a bottomed at extreme oversold levels, as we saw a couple of times during 2011. Those 2 times were specifically during Sept 2011, when gold declined after gold it reached an all time high (\$1923 intraday), and Dec, when gold fell to its 65 wk MA.

Aside from those two instances, gold hasn't been as oversold as it is today during the past year or so. This is why, from a technical point of view, we believe that gold's at a good buying level.

Silver has been more impressive as it has risen a total of 16% from the closing low on Dec 29th, 2011 to yesterday's close.

Silver has declined to its 75 day MA, closing below it yesterday for the first time since early January this year. Moreover, our indicators are showing silver fast approaching oversold levels and nearing a bottom, despite its strength in holding near the \$32 level.

Silver's indicators are showing us that silver is not out of the woods yet and it may decline a bit further before it finds a bottom. **We'll wait for confirmation from our indicators to buy more silver once again.** Buying below \$30 would be ideal!

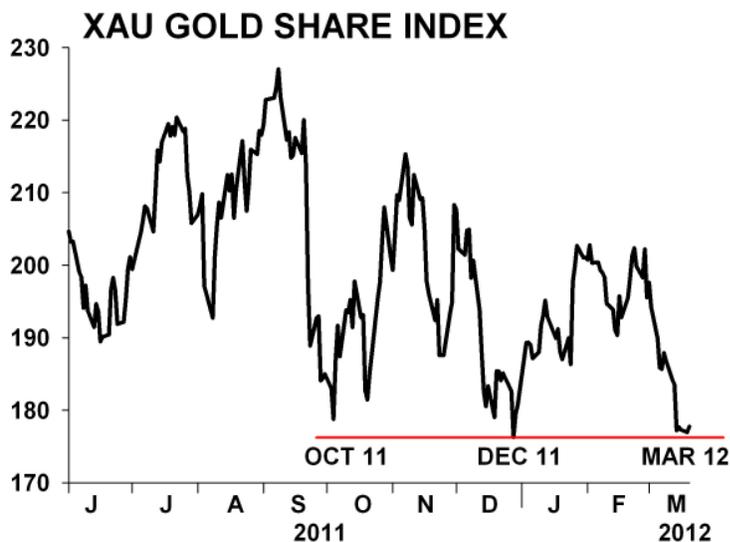

Gold shares on sale

As for gold shares, the bottom line is.... they're cheap.

We've been insisting on buying during weakness as we want to make sure you're not left out of this great opportunity.

As you'll see more precisely in the chart section below, gold shares have a common thread. **They're either forming bullish downside wedges or they're holding at important intermediate support levels.** Not only that, our indicators are showing that they've reached oversold levels, some of which have reached extreme oversold levels as shown by our in house Spinner and confirmed by their RSI.

LOOKING FOR A BOTTOM

In some cases, the oversold levels they've been reached are equivalent to the levels seen back in 2008!

Our in house Adv/Dec Line has broken clearly below its intermediate support and into new 1+ year low but has found some support at the 5200 level. Its Spinner is showing it's reached an oversold area. Moreover, its declining within a bullish downside wedge with an upside target of 5325.

All of which confirms the action seen in the HUI, which has also broken below its 17+ mo long support, but reaching extremely oversold levels. **This is seen by its RSI level as it has bottomed from a 2+ year low while Spinner bottoms at an oversold area.**

The XAU is showing a similar pattern as it has reached a 1+ year low on its RSI and its Spinner is also near an **extreme oversold**. Moreover, XAU has bottomed at its Dec lows which may be leading.

Silver shares are not out of the woods yet as they've yet to reach the oversold levels that gold shares have. Gold shares are at the bargain levels, whereas silver shares are not. One exception is SLW, which is at a low area and has traditionally been a great performer.

So, what does this tell us?

- 1) Buy more gold below \$1650.
- 2) Keep your silver. Wait for better and more clearer signals to buy again, ideally below \$30.
- 3) Buy gold shares and SLW!

GOLD, SILVER & INDICES

GOLD APR 2012 (GCJ12) 3/20/12 CLOSE = 1647

SPINNER (3, 16, 16)

**BOTTOMING & STARTING TO
CROSS ABOVE MT MA**

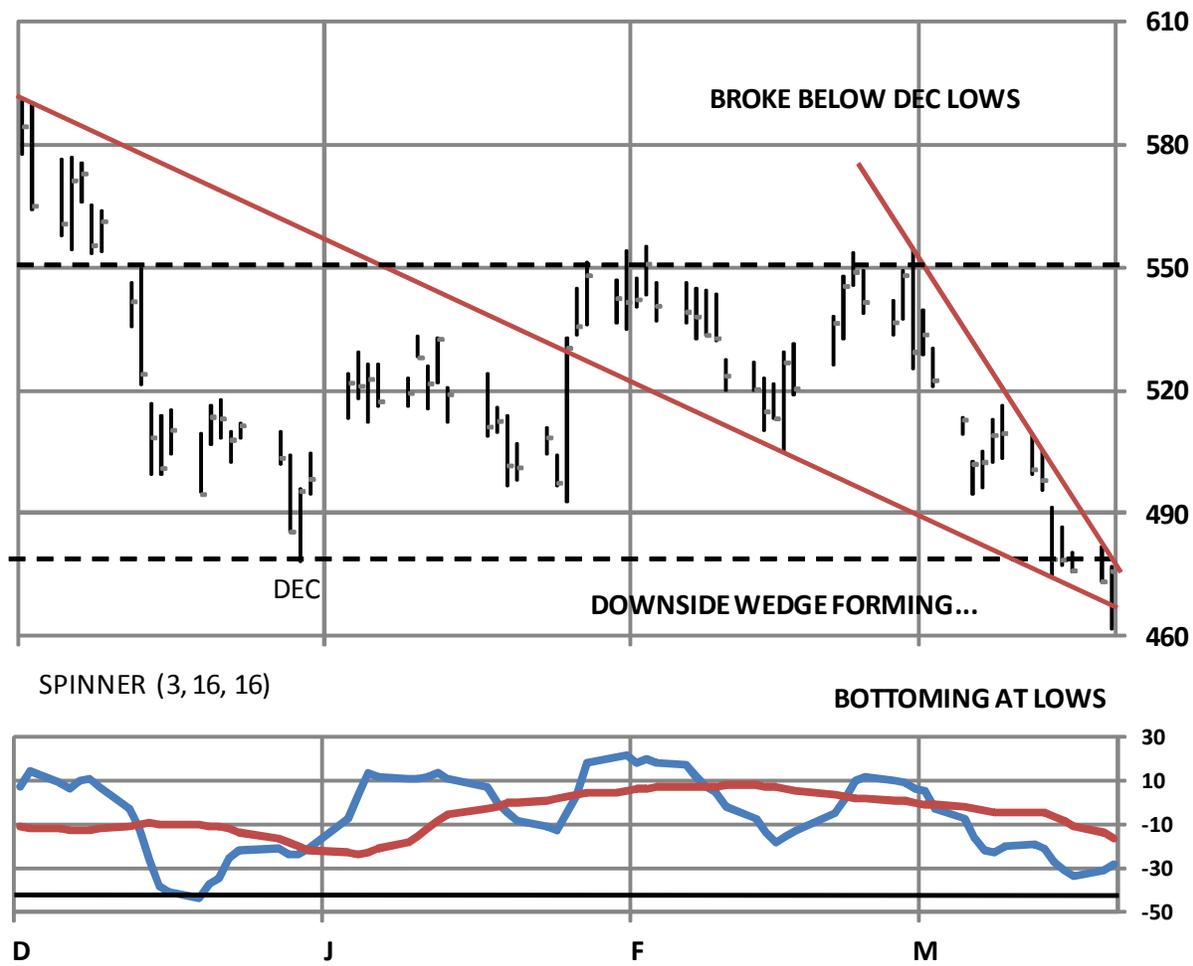

Open trades:	Long at:	Entry level: 1640 (Oct-18-11), 1710 (Oct-26-11), 1750 (Nov-10-11), 1725 (Nov-17-11), 1600 (Dec-14-11), 1595 (Dec-27-11) & at 1650 (Mar-15-2012).
	Stop:	All: 3dc below 1600 (adjusted).
	Profit targets:	1800 (adjusted), 1900 (adjusted), 2000 &/or 2200.
New Recom:	Keep your positions. Buy more below 1650.	
Comment:	Gold remains vulnerable and is holding near its support, at the 1650 level, while Spinner forms a bottom at oversold levels. Moreover, Spinner has started to rise and its looking to break above its MT MA showing underlying strength. If gold breaks above 1700, we'll likely see it rise once again to test the 1800 level. On the downside, if gold is unable to break above 1700, we'll continue seeing weakness and a decline to test its 65wk MA at 1595 would then be likely. Continue buying gold on weakness below the 1650 level.	

SILVER MAY 2012 (SIK12) 3/20/12 CLOSE= 31.834

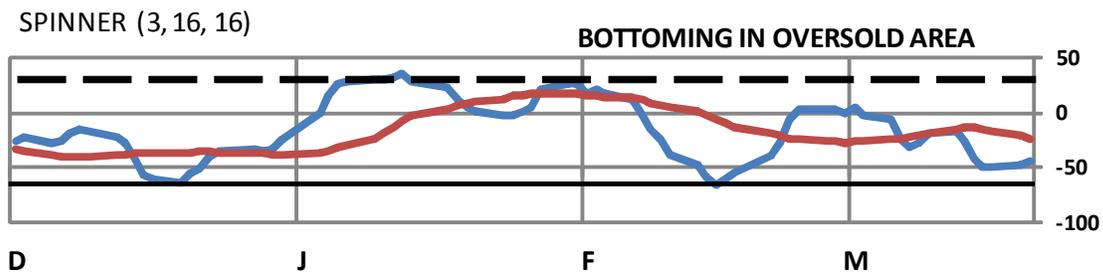

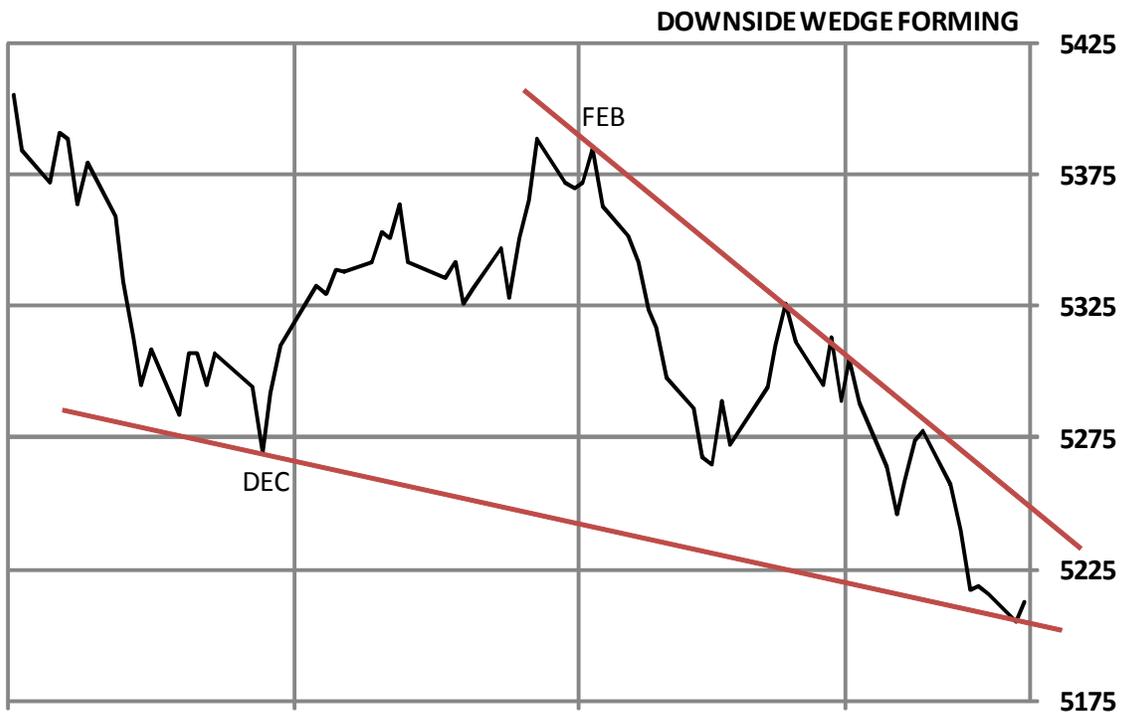

Open trades:	Long at:	Entry Level: 29.65 (Sept-28-11), 29 (Oct-4-11), 29.95 (Oct-20-11), 31 (Nov-25-11 & Dec-12-11), 28.75 (Dec-14-11), 28.80 (Dec-27-11) and 27 (Dec-27 & 29-11). Sold a fourth at \$33 and another fourth at \$36 for a profit.
	Stop:	ST & MT: 2dc below 27.
	Profit targets:	36 &/or 40.
New Recom:	Keep the second half of your position. Sell more at \$36. Buy more below \$30.	
Comment:	Silver slipped below both its 75 day MA (32) and its Dec uptrend line on lower than average volume. This tells us that, despite weakness, silver is still holding firm while it forms a base near its 75 day MA. If silver can hold near these levels, we'll see underlying strength. Spinner has been bottoming near oversold levels showing more upside potential than downside risk. Moreover, RSI is at the 30 level while silver continues to trade at the lower side of its Bollinger Band, telling us that a rise is due. On the downside, keep an eye on 32. If silver continues to trade below it, we'll see more weakness. Buy more below 30.	

HUI GOLD BUGS INDEX (HUI) 3/20/12 CLOSE= 476.33

Comment: HUI broke below its 17+ Mo support this past week showing weakness in gold shares. However, the decline has formed a downside wedge with an upside target of 530. Moreover, Spinner is bottoming near extreme oversold levels while RSI is bottoming at a 2+ year low. All signs that gold shares are at or near a bottom showing good upside potential. This means HUI is likely to rise to the 550 level resistance once again before it continues to decline. We'll be buying more at current levels as gold shares continue to bottom... and sell some on a rebound near 550.

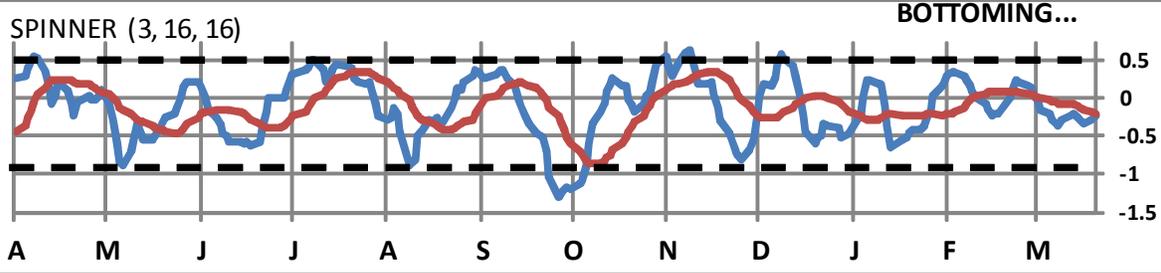

ADEN GOLD STOCKS ADV/DEC LINE 3/20/12 CLOSE=5213

Comment:

Continued to decline showing weakness in gold shares. However, the Adv/Dec Line seems to have found some support above 5200 as Spinner reaches an oversold area. Moreover, the decline has formed a downside wedge with an upside target of 5325. The Adv/Dec Line is confirming that gold shares are poised for a rebound rise to the Feb high resistance level. If the Adv/Dec Line breaks above the Feb high, we'll see renewed strength and a rise to its next resistance at the 5400 level would then be likely. Keep your positions or buy more if you're not in.

ADEN SILVER SHARE INDEX (ASSI) 3/20/12 CLOSE= 19.606

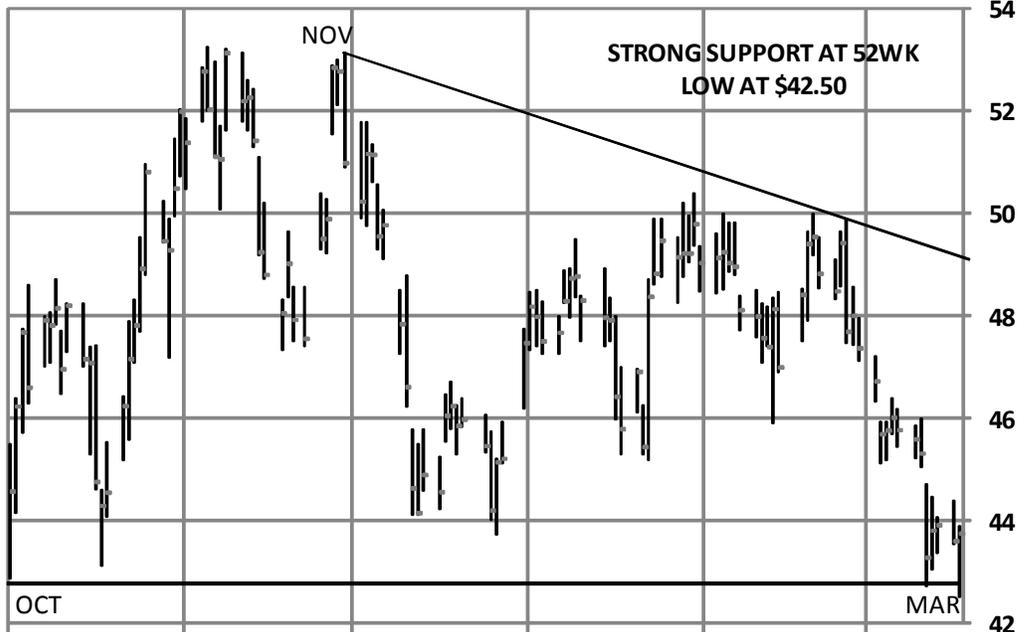

Comment:

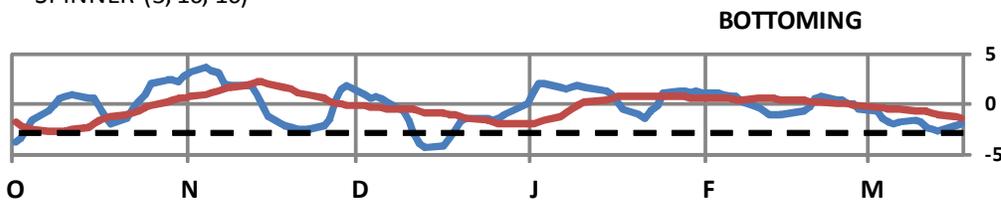

Weakness! ASSI continue to decline without showing signs of a bottom. Spinner holding at current levels and has started to rise, close to crossing above its MT MA. With the exception of SLW, silver shares are not providing clear entry signals as are gold shares. However, if silver holds near its 75 day MA at 32, it'll likely rise once again. If so, silver shares will follow silver as we've seen consistently in the past. For now, we recommend staying on the sidelines until we see silver shares bottom at oversold levels.

STOCKS

Barrick Gold Corp. (ABX) 3/20/12 CLOSE= 43.79 US\$

SPINNER (3, 16, 16)

Barrick Gold Corp. (NYSE:ABX); gold: US\$ Also trade

Open trades:	Long at:	43.65 (Mar-14-12) & 43.50 (Mar-16-12).
	Stop:	2dc below 42.50 (adjusted).
	Profit Target:	48.50 &/or 52.

New Recom: Keep your position. If not in, buy more below 44. Look to sell half at 48.50.

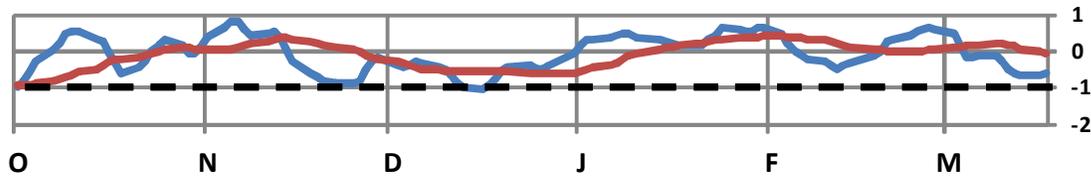

Comment: ABX has formed a base above its 52 wk low (42.50) while Spinner forms a bottom at oversold levels. Moreover, ABX's RSI is at a 9 Mo low while piercing the bottom side of its Bollinger Band, telling us that ABX has declined too far and a rebound rise to the top side of its Bollinger Band near 50 is likely. On the downside, keep an eye on 42.50 (52 wk low), a break below this level would confirm bearish action and a decline to lower lows would be possible.

Aurico Gold Inc (AUQ) 3/20/12 CLOSE= 8.72 US\$

SPINNER (3, 16, 16)

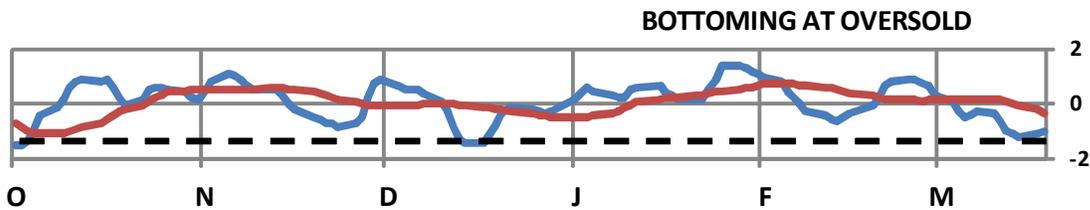

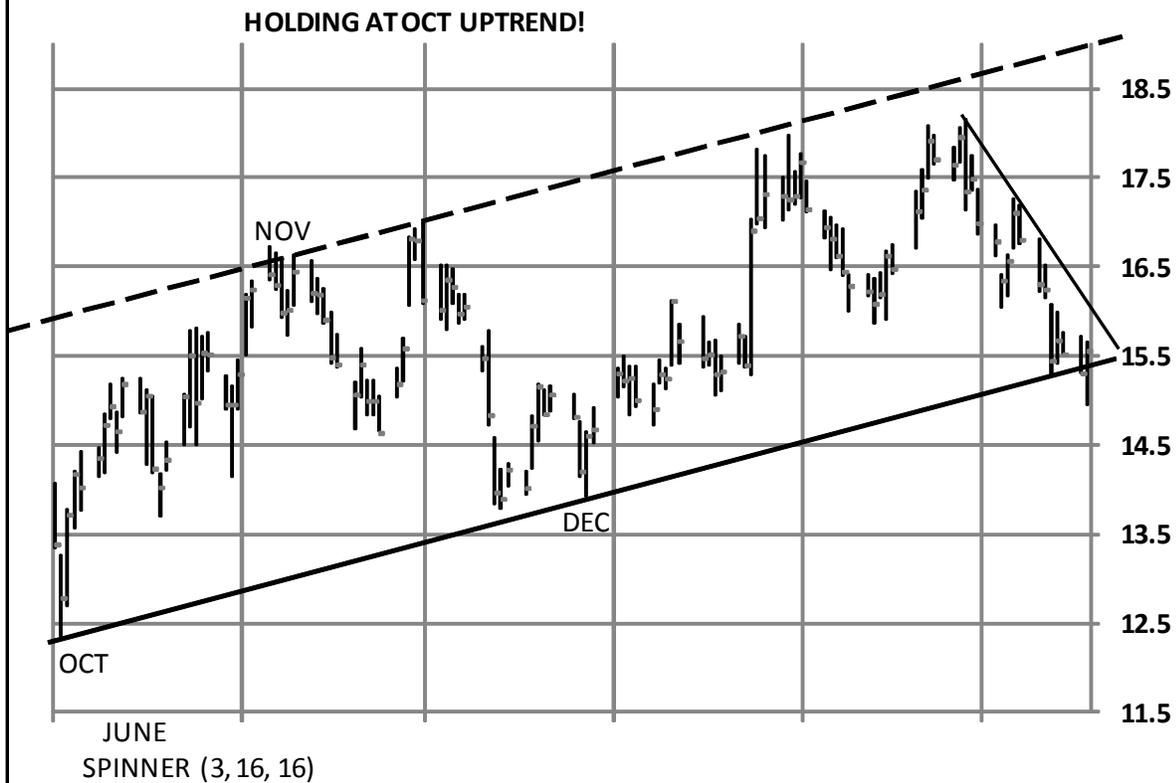

NEAROVERSOLD

Aurico Gold Inc (NYSE:AUQ); gold: US\$ Also trade

Open trades:	Long at:	9.60 (Feb-23-12) & 8.80 (Mar-14-12) & 8.70 (Mar-16-12)
	Stop:	2dc below 7.50.
	Profit Target:	11 &/or 12.
New Recom:	Keep your positions. If not in, buy below 9.	
Comment:	Despite weakness, it has managed to stay well above its Dec lows and has found important intermediate support at the 8.50 level. If AUQ can hold above this support during weakness, it'll likely rise to test its Feb highs in the ST. On the downside, if AUQ breaks below its 8.50 level, it could test its Dec lows near 7.50.	

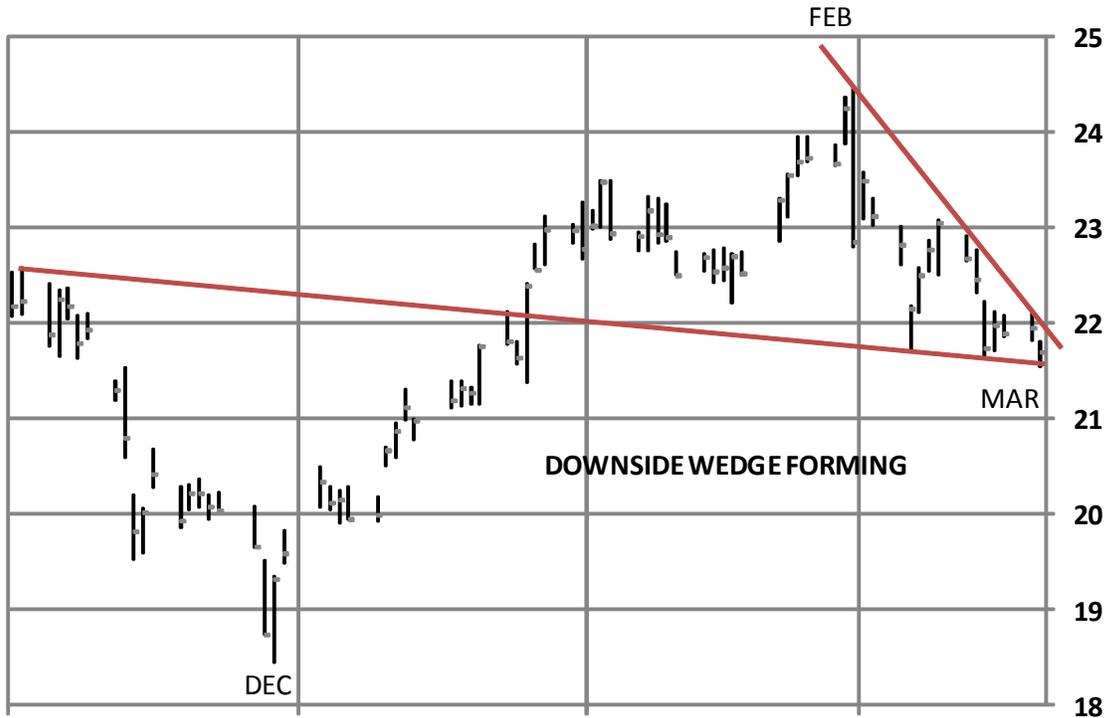

YAMANA GOLD (AUY) 3/20/12 CLOSE= 15.57 US\$

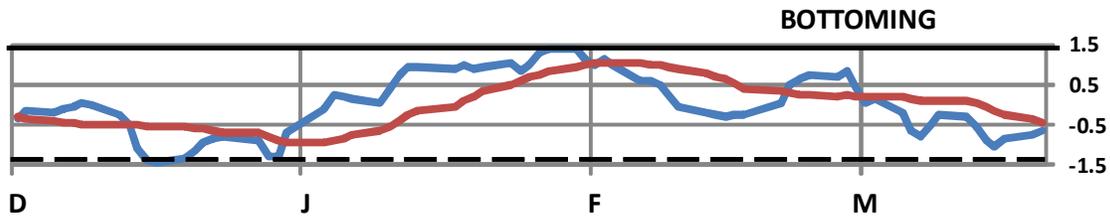

Yamana Gold (NYSE:AUY); gold: US\$ Also trade TSX:YRI

Open trades:	Long at:	Entry Level: Some bought at 15 (Mar-20-12)
	Stop:	S/T & M/T: 2dc below 14
	Profit Target:	17.50 &/or 18.50.
New Recom:	Buy more at mkt!	
Comment:	AUY dipped below the 15 level only to jump back above 15.50. AUY is currently holding firmly at the bottom side of its Oct upchannel while its Spinner bottoms at oversold levels. This looks like a classic bottom area. Keep an eye on the 14 level as it's become an important intermediate support. A break below this support would signal weakness and a further decline would then be likely.	

CENTRAL FUND OF CANADA (CEF) 3/20/12 CLOSE= 21.72 CAD\$

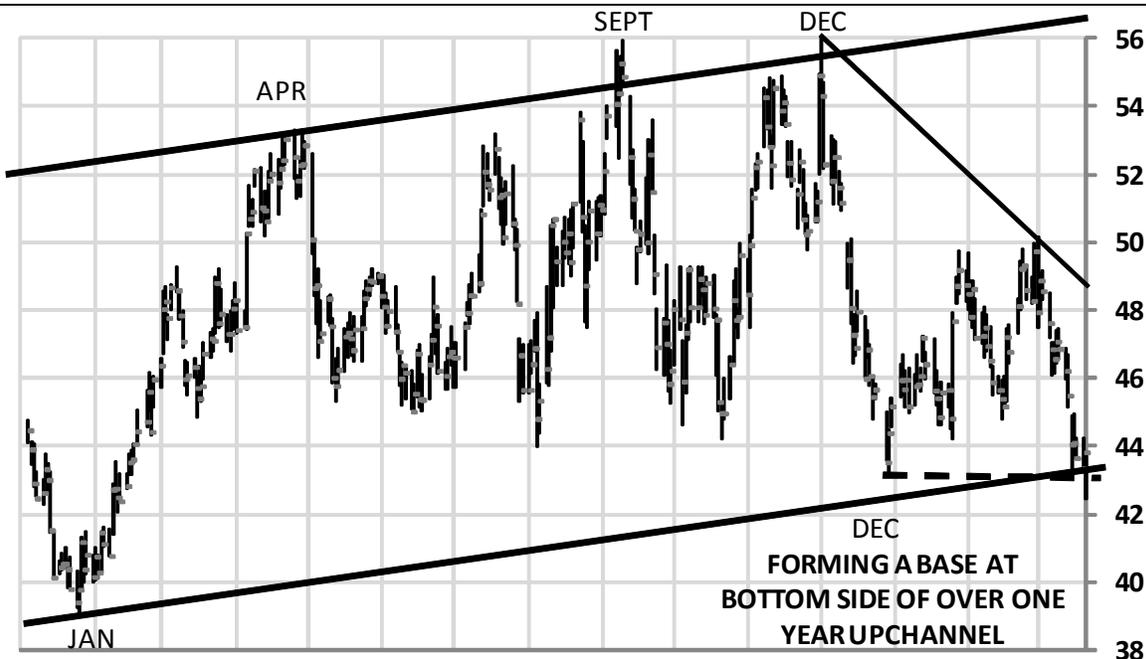

SPINNER (3, 16, 16)

Central Fund of Canada (CEF); gold & silver: US\$

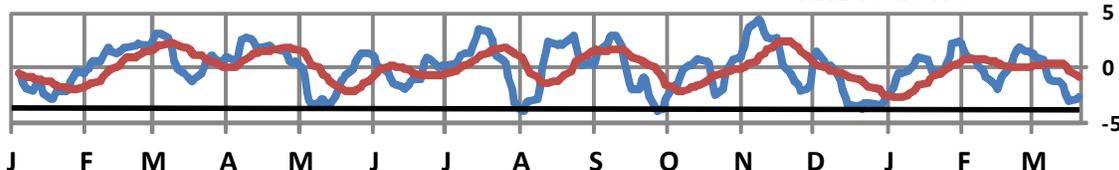

Open Positions	Entry Level	21.90 (Mar- 14 & 16-12)
	Stop:	2dc below 20
	Profit Target:	24 &/or 26
New Recom:	Keep your positions. If not in, but more up to 21.90. Sell half at 24 and the rest at 26.	
Comment:	Slipped below its 75 day MA yesterday together with weakness in silver. However, downside wedge with upside target of 24.50 is forming. CEF must break above its Feb downtrend at 22.50 to confirm wedge breakout. On the downside, keep an eye on the 20 level, a 2dc below it would show weakness and a further decline would then be likely.	

GOLDCORP (G.TO) 3/20/12 CLOSE= 43.85 CAD\$

SPINNER (3. 16. 16)

FELL TO LOWS

GoldCorp (TSX: G) Also traded in NYSE: GG

Open trades:	Long at:	Entry Level: 45.65 (Dec-22-11), 44.40 (Mar-14-12), 43.80 (Mar-16-12) and 43 (Mar-20-12). Sold half of original position at 50 for a profit.
	Stop:	All: 2dc below 43
	Profit targets:	50 &/or 53 (adjusted).

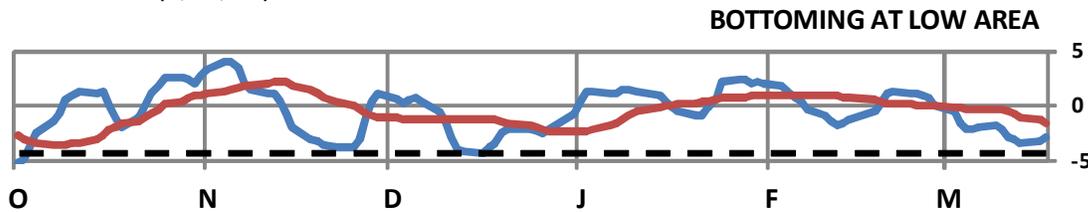

New Recom: Keep your positions. If not in, but more below 44. Sell half at first profit target.

Comment: Broke below the 2011 uptrend line and into a 52wk closing low. However, G.TO is holding at the Dec lows where it found support. Spinner basing at oversold levels while RSI is rising from 16, together both indicators are showing that a rebound rise in the ST, to the 48 level is likely. Strong resistance at the 48 to 50 level. G.TO must break this level to see renewed strength. On the downside, keep an eye on 43.35, G.TO's 52wk low, as a break below it could take it to test the Jan lows near 39.

Gold Miners ETF (GDX) 3/20/12 CLOSE= 49.86 US\$

SPINNER (3, 16, 16)

Gold Miners ETF (NYSE:GDX); gold: US\$

Open trades:	Long at:	57 (Feb-23-12), 50.85 (Mar-14-12) and 50.25 (Mar-16-12).
	Stop:	2dc below 48.50 (adjusted).
	Profit Target:	57 & 61
New Recom:	Buy more at or below 50. If sold, buy back.	
Comment:	Has found support at the Dec lows as Spinner reaches oversold levels, telling us that downside risk is limited. Moreover, RSI is bouncing from a 1+ year low. Downside wedge with upside target of 56 is forming. Keep an eye on 48.50, GDX's 52wk low, as a break below it would show bearish action and a decline to lower lows would then be likely.	

MKT VECTORS JR. GOLD MINERS (GDXJ) 3/20/12 CLOSE= 24.81 US\$

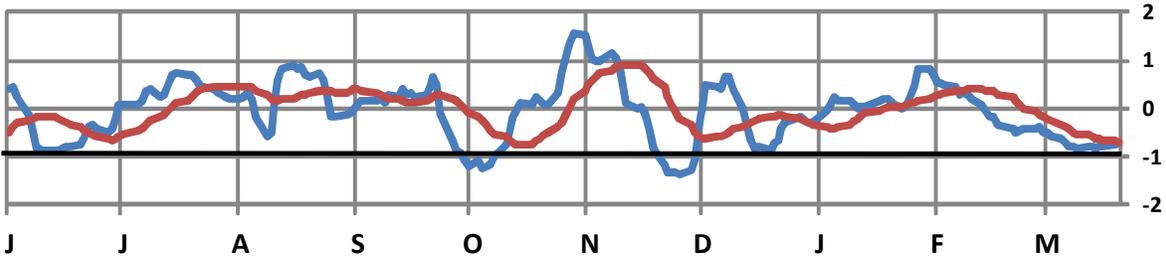

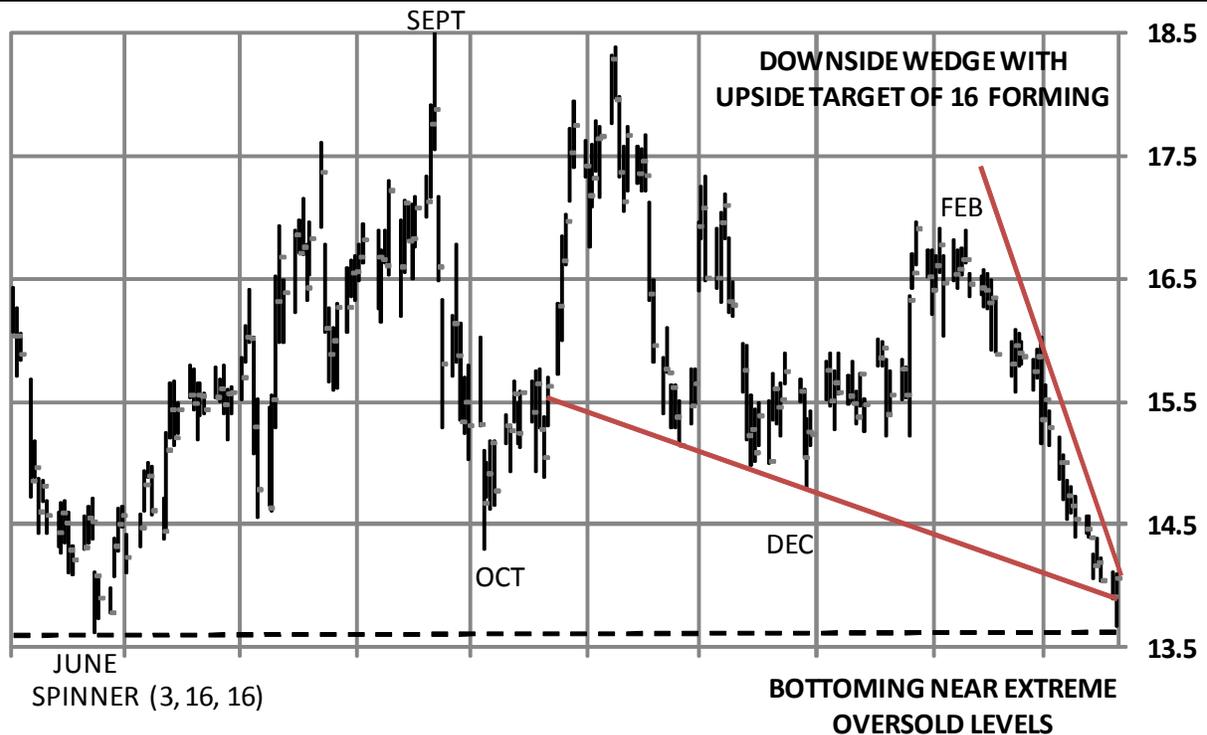

Junior Gold Miners ETF (GDXJ)

Open trades:	Long at:	Gamblers bought at 29.40 (Nov-30-11), 25.25 (Mar-14-12) & 25.35 (Mar-16-12). Sold 2/3rds of original position at 26 and 30.
	Stop:	ST & MT: 2dc below 23.
	Profit targets:	28 &/or 30 (adjusted).

New Recom: **Don't sell! Keep your positions. Buy more at 24.50 or lower.**

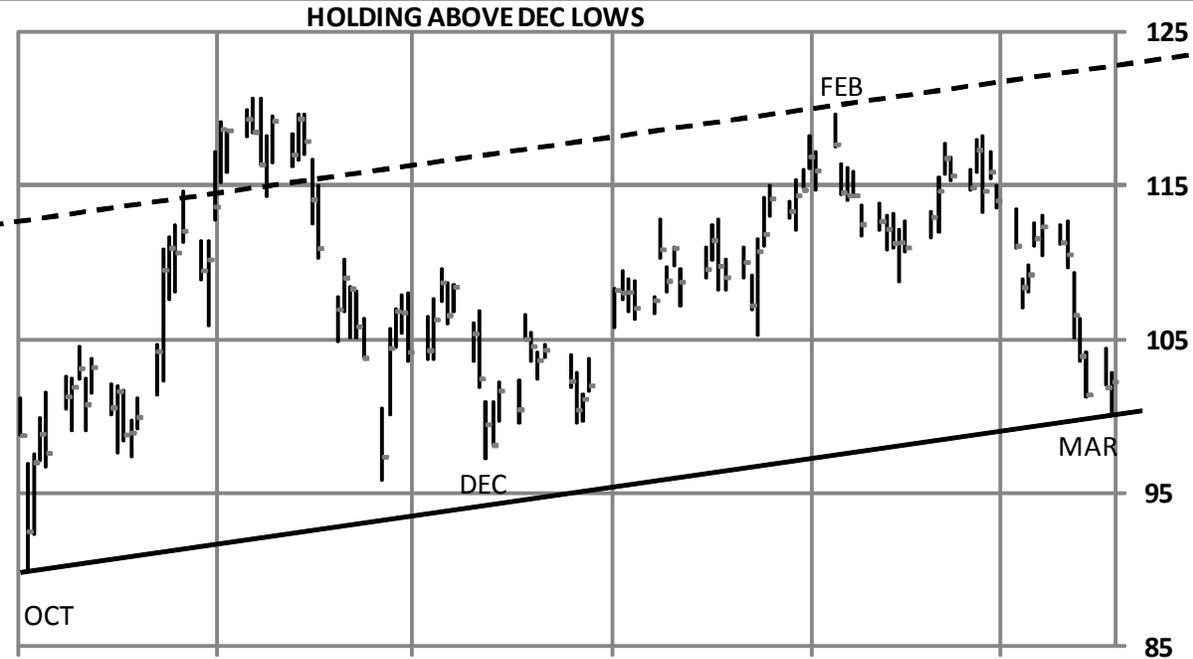

Comment: GDXJ continued to decline, and is now reaching oversold levels. A rebound rise is likely. Moreover a downside wedge with an upside target of 28 is forming. A break above 26 on a 2dc would show strength and a rise to the wedge target would then be likely. We recommend taking advantage of a rebound rise to take a profit. On the downside, keep an eye on 23, the Dec low. A break below this level would show continued weakness.

GOLD FIELDS Ltd. (GFI) 3/20/12 CLOSE= 14.08 US\$

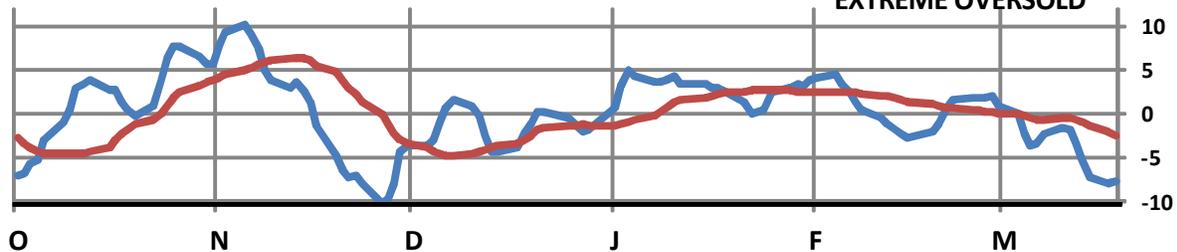

Open Positions	Entry Level	15.40 (Nov-23-11) and 15.40 (Jan-19-12), 15.50 (Feb-29-12), 14.20 (Mar-14-12) and 14.10 (Mar-16-12). Sold half of original position at 17.15 for a 11% gain (Dec-11).
	Stops:	ST & MT: 2dc below 13.65 (adjusted).
	Profit Targets	16.50 (adjusted) &/or 17.
New Recom:	Keep your position. Sell half or all at 16.50.	
Comment	GFI continued to decline, breaking below its Oct lows. Found support above the 13.50 level, the June lows. Spinner is bottoming at extreme oversold and has started to rise, ready to cross above its MT MA. RSI rising from a 3 1/2 year low telling us that some upside time is overdue. Moreover, GFI is a great company... its P/E Ratio is near 10, among the lowest of our recommended stocks, and its dividend is of 0.44 per share. Keep an eye on 13.65, its 52 wk low, as a break below it would be a bad sign.	

RANDGOLD RESOURCES Ltd. (GOLD) 3/20/12 CLOSE= 102.35 US\$

SPINNER (3, 16, 16)

Open Positions	Entry Level	105.5 (Nov-30-11) Sold half of original position at 115 for a profit.
	Stop	ST & MT: 2dc below 98.50 (adjusted).
	Profit Target	115 &/or 125 (adjusted)
New Recom	Keep your position. Buy more at 100 or less. Sell all at 120.	
Comment:	Continues to decline, but has found some support at the 100 level. Spinner and RSI near extreme oversold levels showing good upside potential. Keep an eye on the Dec lows as a break below it would show weakness and a decline to its next support at 90 would then be likely.	

NEW GOLD (NGD) 3/20/12 CLOSE= 9.370 US\$

New Gold Inc. (NYSE/AMEX:NGD) Also traded in TSX:NGD

Open trades:	Long:	Entry Level: 9.60 (Mar-14 & 16-12).
	Profit Target	11.50 &/or 12.50 (adjusted).
	Stop:	ST & MT: 2dc below 9.
New Recom:	Buy more at 9.50 or lower.	
Comment:	Dipped below its major support, but held above it on a close. Spinner is bottoming at an oversold area while its RSI is rising from a 1+ year low. This is telling us that NGD is at a great buying level and upside potential is higher than downside risk. However, keep an eye on 9 as a break below it on a 2dc close would show weakness.	

SILVER WHEATON CORP (SLW) 3/20/12 CLOSE= 32.61 US\$

Silver Wheaton (NYSE: SLW) Also traded in TSX:SLW

Open trades:	Long at:	Entry Level: 34 (Mar-14-12) and 33.25 (Mar-16-12).
	Stop:	ST & MT: 2dc below 29 (adjusted).
	Profit targets:	37 &/or 40.
New Recom:	Buy more at 32.50 or lower. Sell half at each profit target.	
Comment:	Broke below its 75 day MA and continues to decline within its Feb downtrend line and approaching the bottom side of the Oct upchannel. Spinner looking for a bottom at oversold levels. RSI at a 1+ year high. Indicators are telling us SLW has fallen too far and some upside is likely. Keep an eye on 29 as its SLW intermediate support. A break below it would show weakness.	

FUTURES

LIGHT CRUDE OIL APRIL 2012 (CLJ12) 3/20/12 CLOSE= 105.61

New Recom:	Stay out for now.
Comment:	Broke below its 25 day MA showing some weakness as it approaches the Oct uptrend line. However, the 75 day MA, at the 102 level, is still an important intermediate support and crude is bullish above it. Keep an eye on the 102 level as a break below it would signal a trend reversal and a decline to the Feb lows the mid 90s would then be likely. We'll look to buy on weakness.

S&P 500 INDEX JUN 2012 (SPM12) 3/20/12 CLOSE= 1400

Comment:

Continues to rise with strength as it peeked above the 1400 level. Spinner is reaching overbought levels, but still has some room to continue rising. S&P 500 is still very strong above its 25 day MA at 1365 and its 75 day MA at 1305. A decline to these levels would be normal and still remain bullish. On the downside, a break below 1300 on a 2dc would show weakness which would then take the S&P to its next support, the 1200 level. Stay on the sidelines for now.

U.S. DOLLAR INDEX JUN 2012 (DXM12) 3/20/12 CLOSE= 79.825

New Recom:

Stay out.

Comment:

The dollar continues to find resistance below the 82 level. However, the Oct uptrend line is an important support at 79. This symmetrical triangle is telling the story as a break in either direction will tell the next direction in the Dollar Index. A break below would show weakness and a decline to the Oct lows would be likely; a break above would show strength and a continued rise.

Quoting *GCRU* is permitted provided *GCRU* name, website address & subscription price are given.

All charts in *GCRU* are daily prices.

Fax subscribers please note this week's password to access *GCRU* daily edition via our website is: (*patience*).

Subscribers can obtain free online chart updates for all gold shares in *GCRU* via: www.bigcharts.com. To view Canadian stks please use CA as prefix (ie, to view Agnico Eagle (Toronto) you must use CA:AEM).

Note: U should NOT feel our recommended prices are set in concrete. If mkts suddenly feel hot or cold to U, or dramatic news occurs, U can buy or sell, or stop at slightly higher or slightly lower prices. It also hinges on your experience level. Some people can use our prices as guides & know when they can take bigger risks.

Spinner: Spinner is an in-house momentum indicator (not always shown on charts). Momentum indicators use the rate of change in price to determine predominant energy flows. Spinner trading signals are generated when the faster timing line crosses above or below the slower confirming line. Upside crosses in the lower range of positive territory offer the most reliable signals for longs; downside crosses in the top range of negative territory for shorts. Avoid trading against the timing line, ie, buying/selling if the timing line is in corrective mode (against direction of trade) unless the confirming line is positioning for a new 'confirming cycle'. It's important to always be aware of location, direction & cycling phase of the confirming line. Spinner signals are more effective in trending mkt's than in trading ranges where indicators such as Stochastics & Williams %R should be used.

ABBREVIATIONS	
1dc	1-day close (the share price must close above or below the indicated price level, before our recommendation is activated)
2dc	2-day close (consecutive)
bot	bought
CAD\$	Canadian dollar
H&S	head & shoulder
