●●●● GCRU #440 on April 6, 2011 (in its 10th year)

Welcome to Gold Charts R Us.

The incredible surge continues! Silver's shine keeps getting brighter as it reached \$39 today, practically an all time high. The gold price hit another record high today, while crude oil reached a 2½ year high yesterday. Gold and silver shares, as well as energy and rare earth, are also being swept up in the whirling rise, with gold shares experiencing their biggest one day gain today in almost one year.

In fact, last week's rise in gold caused the longest streak of quarterly gains in more than three decades. The ongoing turmoil and fighting in the Middle East, North Africa and now the Ivory Coast, together with Japan's struggle to contain the worst nuclear disaster in 25 years, as well as Portugal's debt problem are all adding fuel to the "chaos hedge" buying fire.

Better signs in the economy are increasing demand as well. Commodities are reaching a two year high as economic growth is being sustained. Crude is getting a double boost from rising commodities and Middle Eastern supply concerns. Oil's biggest advance in two years actually led commodities to a third straight quarterly gain as world problems intensify.

INFLATION BREWING

Rising inflation is also becoming a global concern, which will keep upward pressure on commodities. It's already resulted in record high food prices.

Inflation is picking up in Europe at the fastest rate since October 2008, while the European Central Bank (ECB) is signaling that they're ready to raise their borrowing costs. Meanwhile, China raised their interest rates a quarter point today. This makes the fourth rise in less than six months in an effort to curb inflation.

The U.S. is similar. The Kansas Fed president said the "highly accommodative" monetary policy is partly to blame for rapidly increasing commodity prices and he feels interest rates should rise. Ben Bernanke said today that inflation must be watched extremely closely... and we all know he knows more than anyone why inflation is a growing problem.

SILVER: The ultimate star

Silver is outshining most investments. Its 43% rise since the January low clearly shows you why it's the best.

Silver is amazing, as you can see on the chart, which shows silver's big picture since 1967. We have often explained to our subscribers how silver tends to be a sleeper. It has the characteristic of spending months, sometimes years, in a quiet non-eventful move. But once it takes off, it doesn't look back, and it then tends to soar.

This is exactly what has happened in recent months. For instance, the \$20 level was a hard level to crack in the bull market. But once it was clearly surpassed last September, silver jumped to \$30 in three months. Then when it closed above \$31 in February, it jumped to \$39 (today) in less than two months. You get the picture, and the picture is impressive.

With silver at \$39, you can see on the chart that it's practically at a record high. It was above \$39 for only one week in the 1980 peak time period. Also, you can see the similarities between the 1970s bull market compared to today. This scale is semi-log so it allows you to easily compare percentage growth.

Silver is red hot and aside from temporary setbacks, it's set for more exciting upside action in the years ahead. In spite of its 790% rise since 2003, silver still hasn't had the super moves seen in the 1970s.

Meanwhile, the bull market will remain in a solid uptrend by staying above \$23.

TECH TALK: Take off! Gold rose \$25 today to break above its key Nov-Jan Triple Top resistance, above \$1450, closing at \$1452.50 basis June, a new record high! Silver also rose to a new 31 year record high as it closed above the \$39 level! A weak dollar amid political turmoil in the Middle East, speculation on where sovereign debt will take Europe and the world, as well as rising commodity prices are giving gold the extra boost it needed to break above its key resistance.

Our in-house Spinner for gold is showing that this is a good time to buy as it's rising above its medium term MA (slow), but it's still far from its overbought area telling us that we could be seeing a stronger rise in gold before we see it correct.

Silver has been rising non-stop for some time now. Its 25 day MA, which has provided key short term support during silver's upmove since Feb, is only at the \$36 level. Silver is very strong above this level and as long as it does not break below it after a 2 dc, keep riding the bull! Our in-house Spinner is telling us that silver is slowly reaching an overbought area, but it still has room to rise further. This is warning us to take profits soon.

Silver shares are doing good as well. Silver Wheaton, one of our all time favorites, is doing great as it almost reached it's all time high of \$46. Everything is geared towards a continued rise. As you will see in its chart below, SLW is not overbought, which means it's likely to rise a bit more before it corrects.

Profits are the name of the game, and it's always good to take some if the timing is good. Most of our recommended stocks reached their profit targets, or are near them. After a rise, like we are seeing, a small correction would not be unusual as day traders bank profits. We will be looking to buy more when the time is right.

Remember, you should always keep an eye on our profit targets and look to take some profits as those targets are hit because they tend to be areas where the price of any given stock could resist or pull back. Also, if you are going to gamble, make sure it is with a small portion of your portfolio to avoid getting wiped out.

Gold shares made an important advance as HUI was able to break above its December resistance level to a new closing high at 596.20. At current levels, gold shares are bullish and they are poised to continue rising to new highs. On the way up, we will be taking profits and buying new positions to take full advantage of the rise and also to protect profits against a correction, which is bound to happen at some point. Spinners overall are nearing overbought areas, which tells us that we should be taking profits as a correction may be upcoming, so stay cautious.

Our in house Adv/Dec Line also is looking bullish as it clearly broke above the Dec downtrend line, closing at 5372, confirming that the surge in gold and gold shares is fueled with strength that could take gold and gold shares to their next profit targets. Many have asked if we will continue to have the Adv/Dec updated daily on our website. Initially, we were not going to, but we will do so as we have had several requests. Starting next week we will be posting the Adv/Dec Line on our site and updating it on a daily basis.

On the downside, we are seeing upside wedges forming in gold and silver, which could eventually signal declines that we must be ready for. For the time being, as gold and silver continue to reach new highs, we remain bullish, but always be aware of the downside as well.

The S&P 500 is also resisting at the old record highs but it's still looking strong, despite Spinner nearing overbought areas. We will hold a bit longer to see if the current resistance can be broken. This has been one of our best performers and we'll continue to buy and sell it when the time is right.

What does this tell us? Buy gold at mkt! Look to take some profits near our next profit targets at the \$1500-1550 level. Buy a bit more silver at mkt and look to take some profits at our next profit target.

Please note that in our Feb 2nd issue, we left an open order to buy BTO.TO after a 2dc above 2.65. If you followed the recommendation, you would have bought at 2.70-2.80 level. Today BTO.TO reached the upside target of its Cup & Handle formation at 3.42 and its now overbought. We recommend taking profits now.

COMEX GOLD JUNE 2011 FUTURES 20 WEEK CLOSE = 1452.50

SPINNER (3, 16, 16)

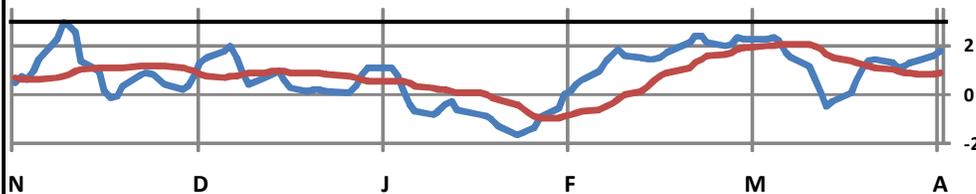

Comex gold June 2011 futures Cx 480 min tick chart (all sessions)

Open trades:	Long at:	Some bought at 1363 others at 1385 (Feb-18-11), at 1400 (Feb-23-11) all at 1405 (Feb-25-11), 1425 (Mar-3-11) and at 1427 (Mar-23-11)
	Stop:	S/T: 2dc below 1390 (adjusted); M/T: 1dc below 1370 (adjusted).
	Profit targets:	1450 (reached!), 1500 &/or 1550
New Recom:	Buy more at mkt! Take some profits at the 1500 - 1550 level. Gamblers sell short after a 2dc below 1370. All others sell short after a 2dc below 1340. Look to cover half at 1320 level and cover all at 1280 level. Place stops 3 points above entry level.	
Comment:	Gold reached a new record high! Cup & Handle formation underway with gold breaking above 1450. Spinner gaining momentum as it broke above its medium term (slow) MA with room to rise further. All signs of solid strength that could push gold to our next profit target. Triple Top resistance broken but must see if gold can hold above it. On the downside, an upside wedge with a downside target of 1340 has been forming and is still valid despite today's break above the resistance. Must see gold rise further to 1475 level to rule out the upside wedge. We will keep a close eye on this, but for the time being, gold is poised to rise further.	

(SI2011K) N.Y. SILVER DAILY 4/5/11 CLOSE= 39.183

SPINNFR (3. 16. 16)

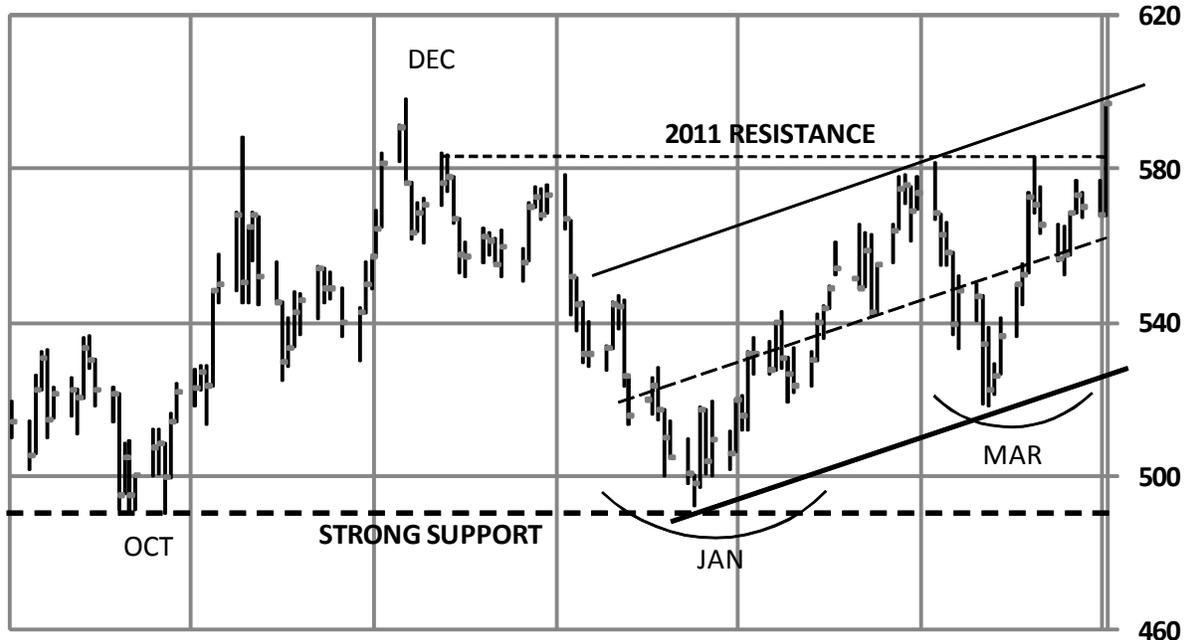

Open trades:	Long at:	Entry Level: 29.50 (Feb-8-11), 30.15 (Feb -9-11), 32.65 (Feb - 21-11), 34.50 (Mar-2-11), 36.25 (Mar-23-11) and at 37 (Mar-25-11). Early birds took some profits at 37.50 :)
	Stop:	S/T: 1dc below 34 (adjusted) M/T: 1dc below 27
	Profit targets:	39 (reached) &/or 41.

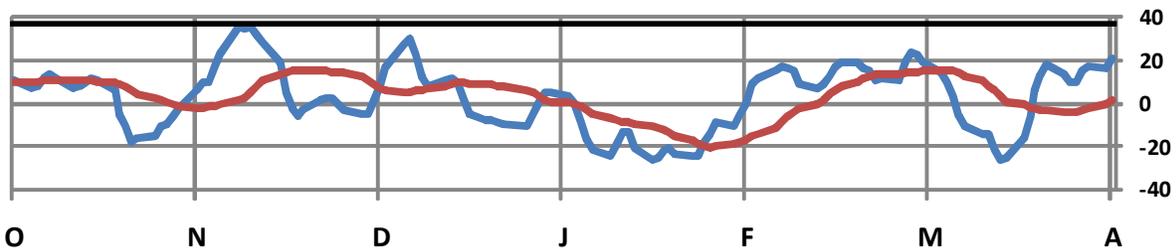

New Recom: Keep your positions. Buy a bit more at mkt. Sell short after a 2dc below 27. Look to cover half at 26 and all at 24 level. Place stops at 1.50 points above entry level.

Comment: Silver's rise is amazing as record highs become a daily event. Today's 31 year high is making silver look more bullish than ever as it is rising strongly within its Jan upchannel! Spinner is gaining momentum with room to rise further. Must wait to see if silver can hold at the 39 level to confirm continued strength in upmove. Keep a close look at the 5 wk MA (currently at 36) as it has been key short term support since Aug. Silver is very bullish above it. Small upside wedge forming with a downside target at the 35 level, this could be telling us that silver may correct soon. If correction holds above the 5wk MA at 36, it still would be super strong.

HUI GOLD BUG INDEX (INDEX) DAILY 4/5/11 CLOSE= 596.85

SPINNER (3, 16, 16)

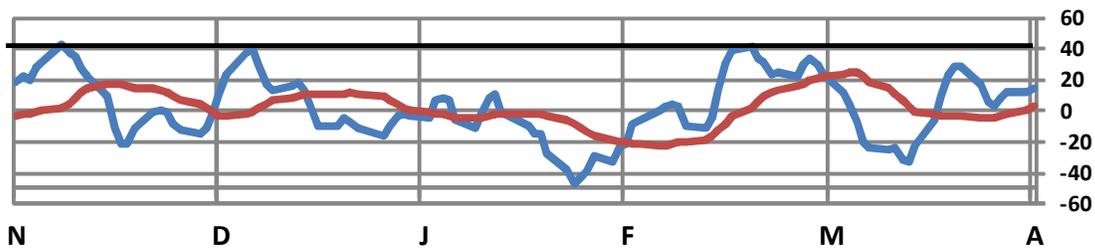

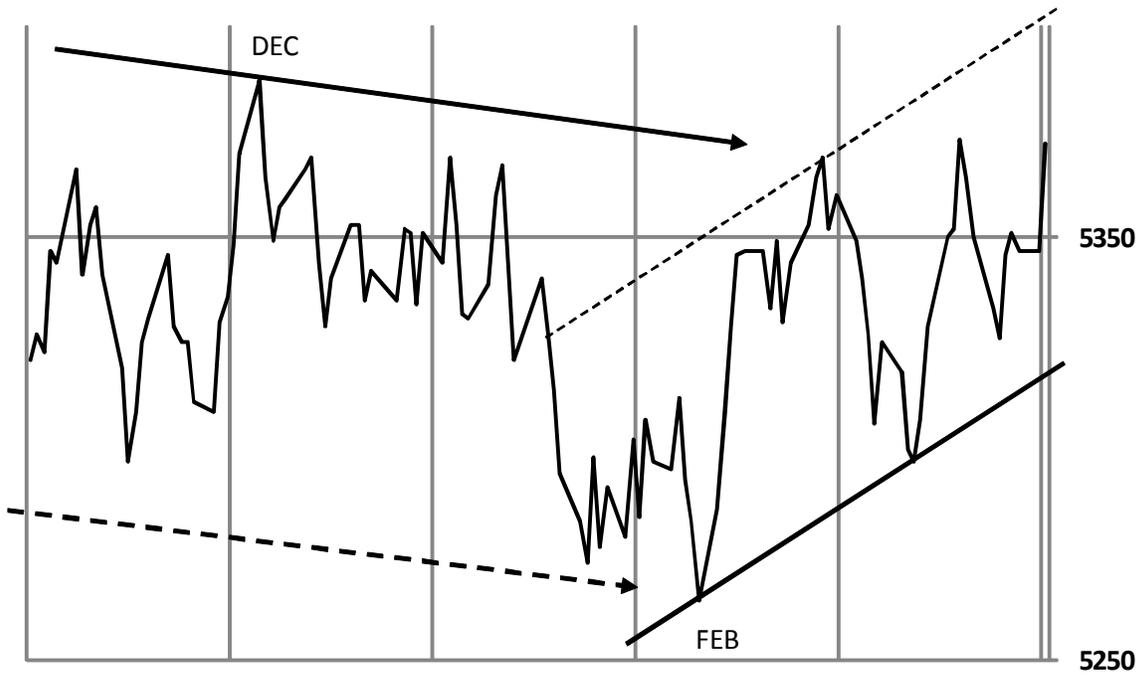

HUI GOLD BUG INDEX DAILY

Comment:

Strongest rise for HUI in almost a year! It broke above it's first key resistance at 583 level rising to the top part of the Jan upchannel and at the Dec highs, which would be it's second key resistance. A break above the Dec highs at 598 level would reconfirm bullish action for gold shares and gold. Cup & Handle formation underway as HUI broke above 583 resistance. On the downside, HUI has strong support at Jan uptrend line at the 535 level and is strong above 560. Spinner is looking bullish as it is way above its medium term MA and still has some room to rise further.

GOLD STOCKS ADV/DEC LINE DAILY CHART 4/5/11 CLOSE=5372

Aden Gold Stocks Advance&Decline Line (SGS A/D) daily chart:

<p>Comment:</p>	<p>Breaking out! Today's rise above the Dec downtrend line is showing solid strength. The Jan uptrend and channel are getting stronger. Must see the Adv/Dec Line surpass the old Dec highs at 5387 to reconfirm strength in rise for gold and gold shares. A break above this resistance would take it to the top side of the Jan upchannel and possibly higher. Spinner on the upmove with room to rise further.</p>

Comment: Bullish! Broke above strong resistance since Nov. Rising steadily within Jan uptrend line where it has support at the 47 level. Spinner broke above its medium term MA (slow) with room to rise further. All good signs of strength. On the downside, be aware of G-TO breaking below the Jan downtrend line after a 2dc below 46 as it would then be signaling a reversal in the intermediate trend.

(PAA - T) PAN AMERICAN SILVER DAILY 4/5/11 CLOSE= 38.55

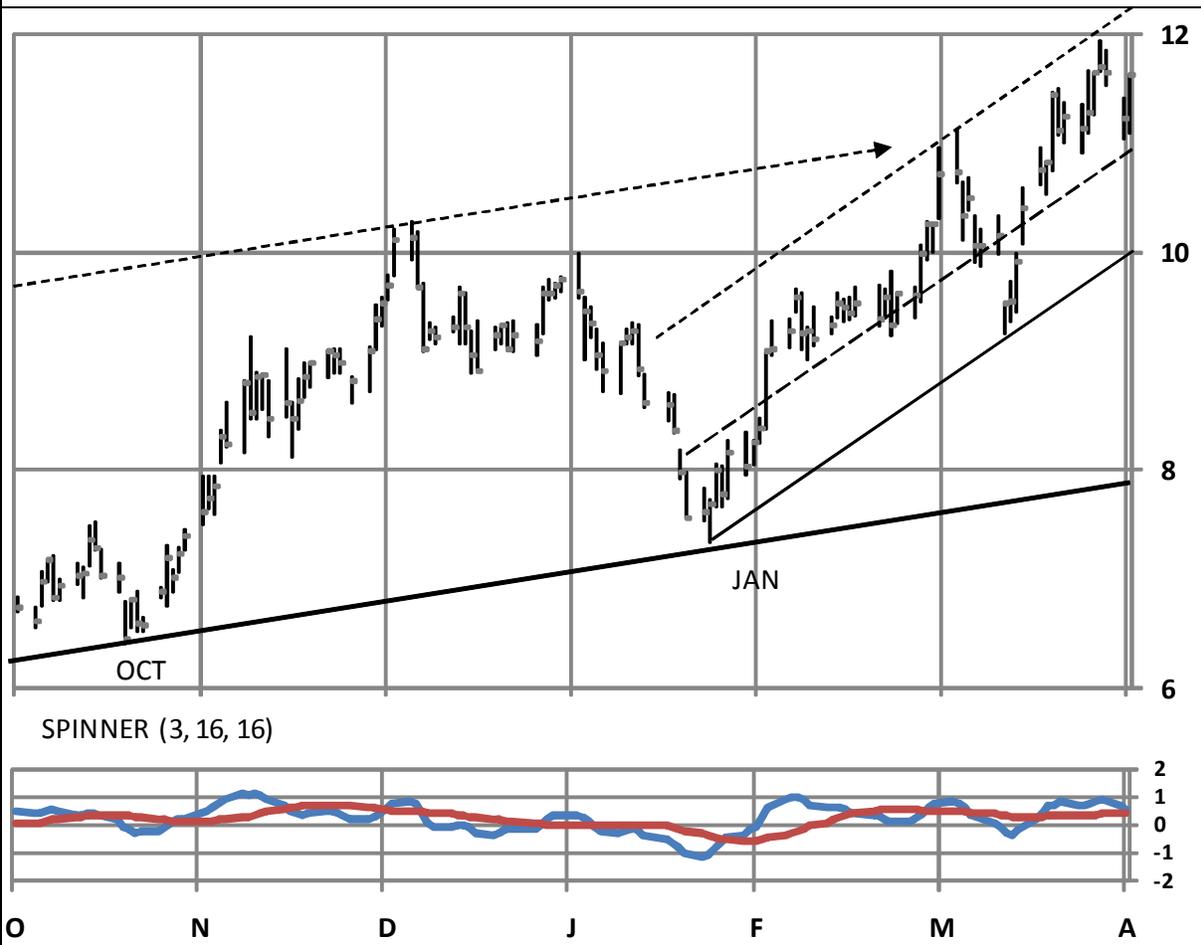

SPINNER (3, 16, 16)

	Profit targets:	46 (practically there!) &/or 50.
New Recom:	Keep your position and look to buy more after a 2dc above 46.	
Comment:	Testing the highs! SLW is strong but it still has the top side of the Oct upchannel to surpass. Must break above it at 46 to confirm strength in rise which could then take SLW to our next profit target. Spinner has room to rise further before it reaches overbought territory. On the downside, if SLW continues to resist, an upside wedge will continue to form with a downside target of 33. Wait for reconfirmed strength to buy more.

Spinner: Spinner is an in-house momentum indicator (not always shown on charts). Momentum indicators use the rate of change in price to determine predominant energy flows. Spinner trading signals are generated when the faster timing line crosses above or below the slower confirming line. Upside crosses in the lower range of positive territory offer the most reliable signals for longs; downside crosses in the top range of negative territory for shorts. Avoid trading against the timing line, ie, buying/selling if the timing line is in corrective mode (against direction of trade) unless the confirming line is positioning for a new 'confirming cycle'. It's important to always be aware of location, direction & cycling phase of the confirming line. Spinner signals are more effective in trending mkt's than in trading ranges where indicators such as Stochastics & Williams %R should be used.
