●●●● GCRU #444 on May 4, 2011 (in its 10th year)

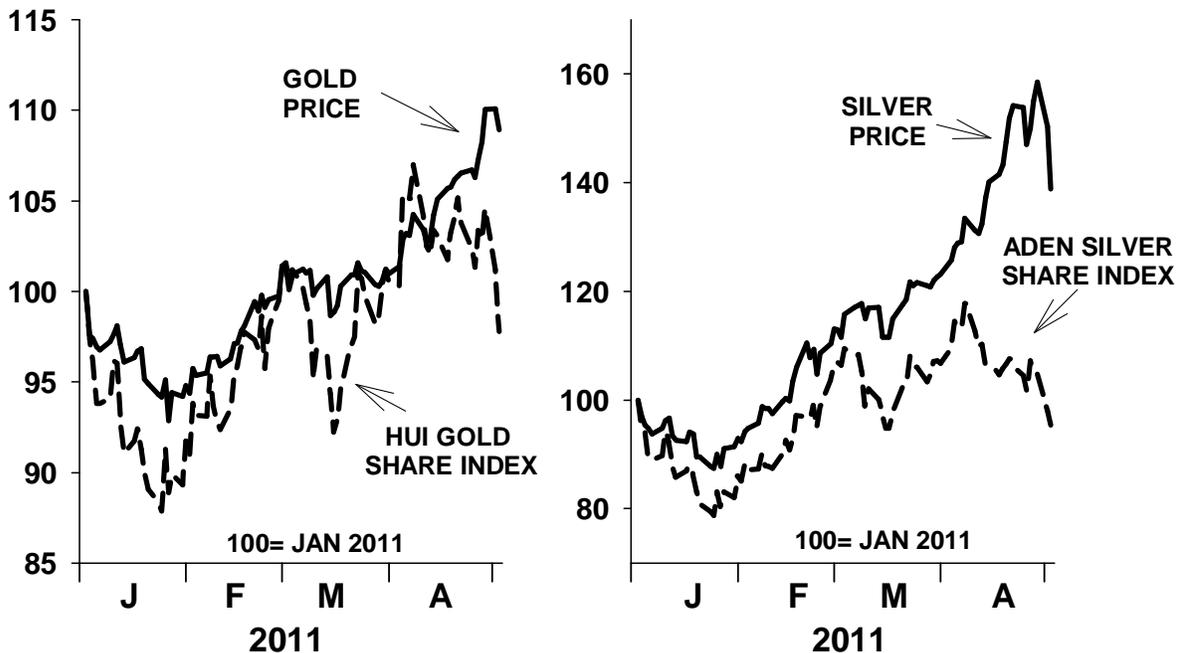

Welcome to Gold Charts R Us.

PREPARE TO SHORT

April ended with a bang... Gold closed at a record closing high that extended to Monday, while silver tripled gold's gain this past month. Gold clearly reached our target level and silver is turning volatile at these frothy levels.

Gold and silver shares have not been doing well as they've been taking a clear back seat, drifting down from their early April highs, almost four weeks ago, clearly separating from the metals' super strength.

GOLD & SILVER VS THE SHARES: Sluggish shares are leading

This softness in the shares, coming during the biggest run up in gold and silver, are telling us that something isn't right. With today's fall in gold and silver, it increasingly looks like they're set to follow the shares in a downward correction.

SIGNS OF EXCESS

The surging silver price is being surrounded by pure speculation and hype, which caused the CME to raise the futures margins by 13%. Plus, when you consider that commodities have beat stocks, bonds and the dollar for five straight months, in the largest stretch in 14 years, while oil is capping an unprecedented eight months of gains, you can see the need for a breather.

Excess is in the air, not to mention the fact that gold and especially silver have risen 18% and 80%, respectively, since their end January lows. Silver jumped 28% in April. This alone is amazing.

You'll remember that gold completed its 10 year anniversary rise last February. That is, it completed 10 years of consecutive gains. And, considering gold rose from April, 2009 to February without more than a 14% decline, a healthy downward correction would not have been unusual. Instead though, gold jumped up to yesterday's record close in an impressive rise... a rise that just may be the start of a stronger phase of the bull market.

Gold got an extra boost this week when the Fed renewed its pledge to continue stimulating U.S. economic growth, after it slowed in Q1 2011, by keeping interest rates low. This hurt the dollar and gold moved higher.

Currently, it's important to know the mega major trend is up for gold and silver and prices are headed higher in the years ahead. The reasons why demand will stay strong continue to mount, from central bank buying, investor buying, the growing global economy and infrastructure, and now the rebuilding of Japan. (This cost is estimated at \$50 billion.)

But we also feel an intermediate top area is forming and it's time to protect some profits and place some short orders. We'll keep our bases covered but this focus is likely upcoming soon. For now, we want you to be prepared for all situations.

In addition, a seasonally low time period is upcoming for the metals and shares between June and August, the summer months. Don't be surprised to see a full downward correction materialize, which will likely shake out the newcomers.

The point is, gold and silver could decline in a healthy correction but they'd still be in a mega bull market. It would actually be a healthy move at this time.

TECH TALK: This past week, gold followed silver as it reached new record highs near the \$1580 level (intraday basis June), above our profit target for the move. Silver went parabolic and yet again it hit a new 31 year closing high!

Silver's surge was followed by a sharp decline in the days that followed, as we've seen with silver in the past. From the 31 year closing high last Friday to today, silver dropped over 16% (intraday basis July)... down like a stick!

This is why we've been recommending to protect the profits you've built up. Silver had simply risen too far, too fast.

Gold's rise has been fueled for different reasons. Not only have traders and investors been jumping on the gold wagon, but central bankers have also been buying to diversify their reserves as a hedge against inflation. Demand for gold from this segment and speculation remains strong and it'll be putting a lot of upward pressure on the gold price in the medium to long term.

At current levels, gold is still very strong above its 25 day MA, currently at \$1490. But a break below this level would probably take gold to our next support level at the 75 day MA, currently at \$1420, where it would still be strong.

The 75 day MA for gold has been key support for the entire upmove since Sept 09. If gold declines and holds at the 75 day MA we'll be looking to buy more since it's very likely that it will continue on its uptrend.

Gold shares have not been as strong as gold. They have been lagging for the most part since early April when they topped and drifted down while gold rose into new high territory. The HUI Index has resistance at the 600 level and it was unable to clearly

break above it, telling us that the real strength behind the upmove was for gold, not gold shares. This was likely due to gold's safe haven status, speculation and accumulation.

Today the HUI Index intraday broke below its 75 day MA, the 553 level, which is not a good sign. Although it wasn't broken on a close, it is likely that it will sometime this week, which would be yet another sign that gold shares are indeed embarking on a downward correction.

With today's decline, the HUI is still holding above the Jan uptrend line. A clear break below it would reconfirm a bearish outlook for gold shares in the short term, which could pull gold down into a correction as well.

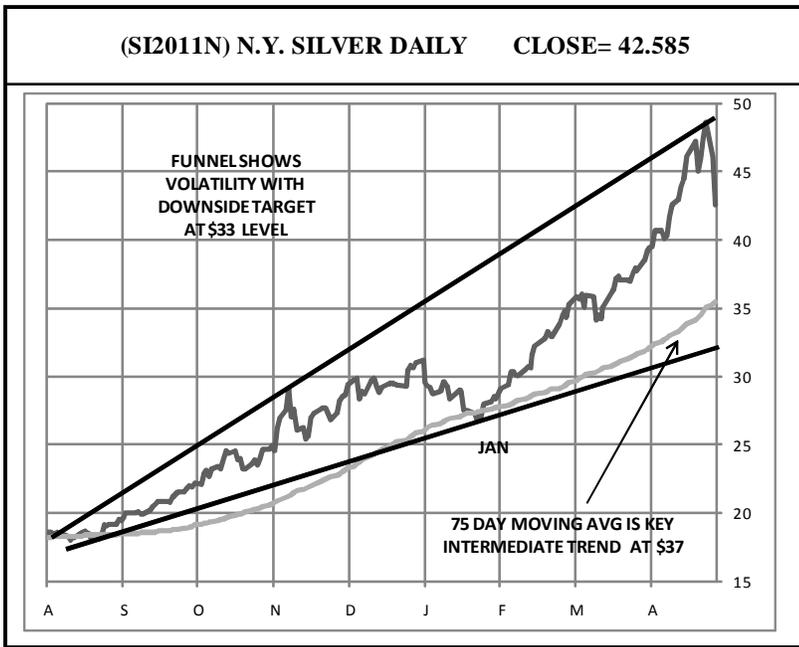

For now, we recommend keeping a small portion of your gold position, no more than 25%, in case gold continues on its rise, but everything is pointing towards gold taking a breather. This is why we are taking profits where we can and keeping a close eye on our indicators to buy more later.

Some of our gold share positions have brought in good profits, specifically UXG, where we averaged a sale price of \$9.25, and G.TO where we have averaged a sale price of CAD \$52.50. We will keep the rest of our gold shares. Even though some may be down, they are still looking strong.

Silver on the other hand, is another story. It rose to a new 31 year closing high on Friday, only to collapse yesterday and today. Silver has been reaching extreme overbought levels for some time now and the decline was to be expected. Silver tends to fall as steeply as it rises, which is why we've been recommending taking profits where you can.

This type of volatility can be explained by the type of investment and speculation that buys into silver. Silver is the poor man's gold and it usually moves together with gold, but not for the same reasons.

During the past few weeks, a lot of speculation has been pushing the price of silver to high levels, which has been the main force behind its strength. This type of demand tends to make silver fall as vigorously as it rises, as opposed to gold which is seen as real money, and these days, yet again, as an important asset for central banks to have in their reserves.

Silver shares have also been declining strongly. We are out of Silver Wheaton and we were able to average out at a great sell price before it started to decline. We are still in Pan American Silver, which has been declining for reasons other than the declining price of silver. We are giving PAA.TO a chance to find support near the Oct uptrend line and/or near the Jan lows, as we believe the price is not reflecting the current market value.

We are also looking to take some profits on our crude position since we are up approximately 15% from our initial entry date. We were very close to our second profit target this past week but we've seen some weakness on speculation that international political turmoil may ease due to the death of bin Laden.

What does this tell us? Sell more gold at mkt. Keep a maximum of 25% of your current gold position. Sell all of your silver position at mkt, if any. Wait for signs of strength to buy more.

- Golden regards from *the Adens... Pam, Mary Anne, and Omar*

COMEX GOLD JUNE 2011 FUTURES 20 WEEK CLOSE = 1540.4

Comex gold June 2011 futures Cx 480 min tick chart (all sessions)

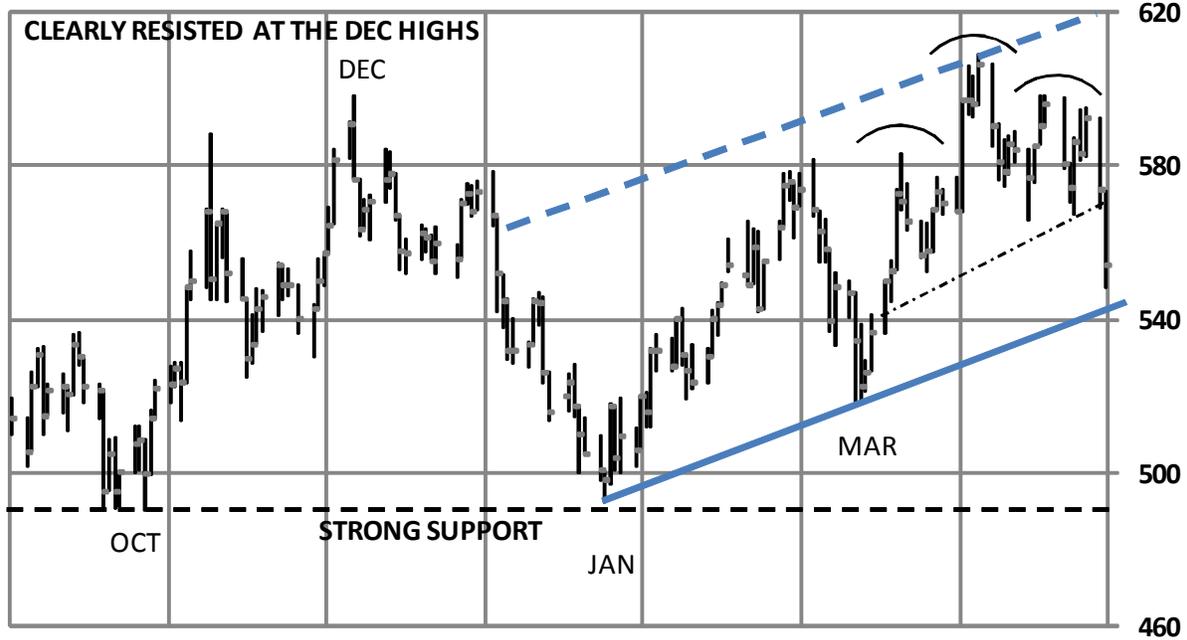

Open trades:	Long at:	Entry level: 1363 others at 1385 (Feb-18-11), at 1400 (Feb-23-11) all at 1405 (Feb-25-11), 1425 (Mar-3-11), 1427 (Mar-23-11), 1455 (Apr-6-12) and 1530 (May-3-11). Sold some more, taking profit at 1530 and 1550 :)
	Stop:	S/T & M/T: 2dc below 1490 (adjusted);
	Profit targets:	1550 (reached!), 1650, 1800 &/or 2,000
New Recom:	Sell some at mkt! Keep 25% of position. Buy again after a 2dc above 1600. Gamblers sell short after a 2dc below 1486 Look to cover half at 1370 and cover all at 1320 level. Place stops 10 points above entry level.	
Comment:	Breakout! Gold overshot top of its Jan uptrend channel into our next profit target! Currently it's resisting at the top side of the Sept upchannel where it might find next resistance at the 1600 level. Gold has been rising with unparalleled strength and may continue rising further, but its due for a rest. All of our indicators are showing that gold has reached or is reaching overbought levels and it's likely to start declining soon. On the upside, gold is very strong above its 25 day MA, currently at 1490 level, and it's still strong above its 75 day MA, currently at 1420. Take some profits now. We will look to re enter when the time is right.	

(SI2011N) N.Y. SILVER DAILY 5/4/11 CLOSE= 42.585

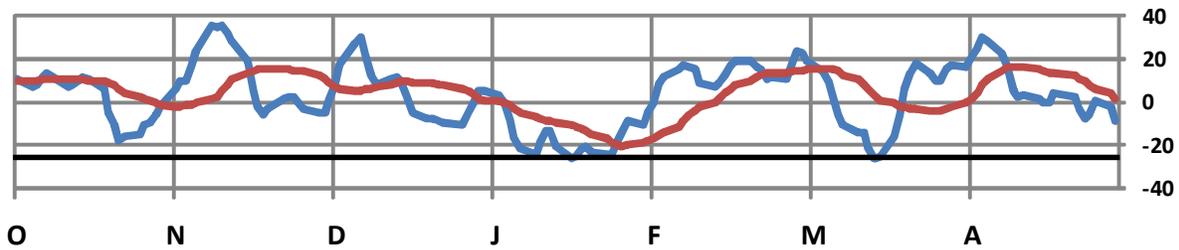

Open trades:	Long at:	Entry Level: 29.50 (Feb-8-11), 30.15 (Feb -9-11), 32.65 (Feb - 21-11), 34.50 (Mar-2-11), 36.25 (Mar-23-11), 37 (Mar-25-11), 39.25 (Apr-6-11) and some at 43.50 (Apr-19-11). Took more profits at 47 :)
New Recom:	Sell all at mkt! Time to bank rest of profits! Buy new positions after a 2dc above 50.35 or if falls to the 29 - 30 level. Gamblers sell silver short after a 2dc below 38. Look to cover half at 33 and cover all at 30.	
Comment:	Volatility continues! Although silver is looking very strong above 41.50 it has found strong resistance at the all time highs and declined an almost 13% intraday today. The 41.50 level is silver's 25 day MA and is just above the Jan uptrend channel. As we have been saying, silver is overbought and a decline or an easing of excess at this moment would be normal. This is why we have been protecting profits. Our Spinner has topped and broke well below its medium term MA, telling us silver is poised to decline further. Signs of weakness!	

HUI GOLD BUG INDEX (INDEX) DAILY 5/4/11 CLOSE= 554.13

SPINNER (3, 16, 16)

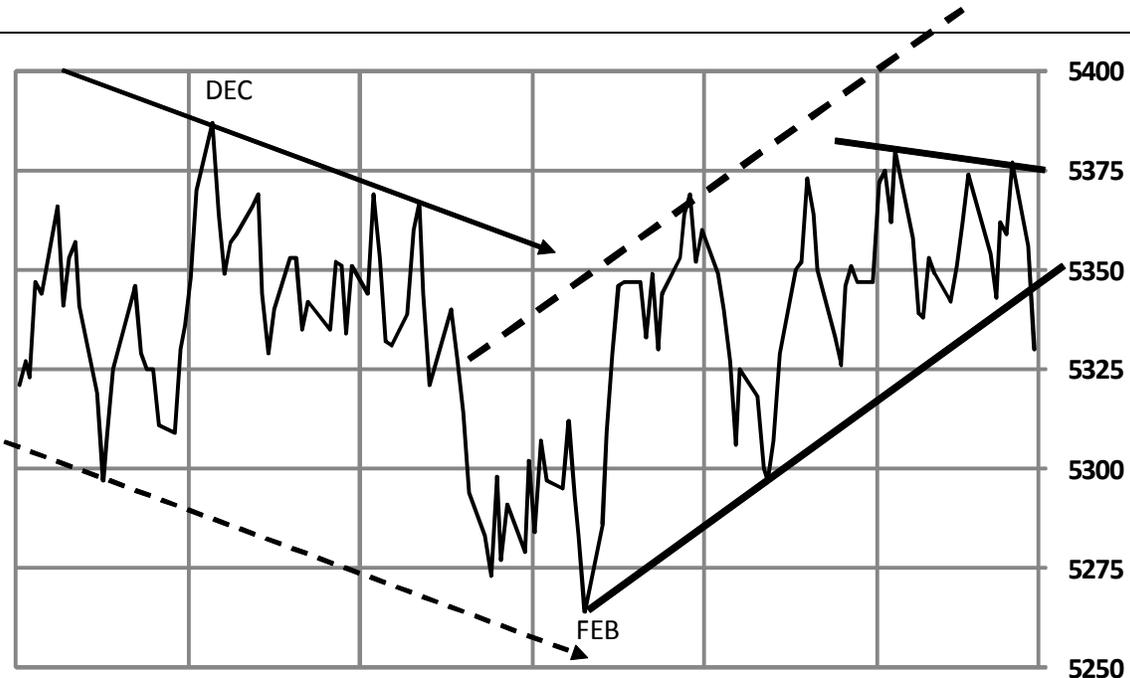

HUI GOLD BUG INDEX DAILY

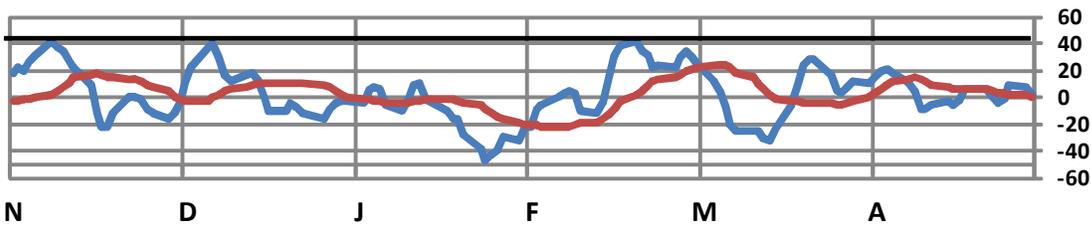

Comment:

Gold shares have found resistance at the Dec highs while gold keeps rising to new record highs. Moreover, HUI just broke below its Jan uptrend line, meaning that a steeper correction for gold shares which could be leading gold itself into a correction. Further, HUI has formed a H&S Top. Today it broke below the neckline support confirming the pattern with a downside target of 520. Spinner declining steadily and below its medium term MA. All important signs of weakness.

GOLD STOCKS ADV/DEC LINE DAILY CHART 5/4/11 CLOSE=5330

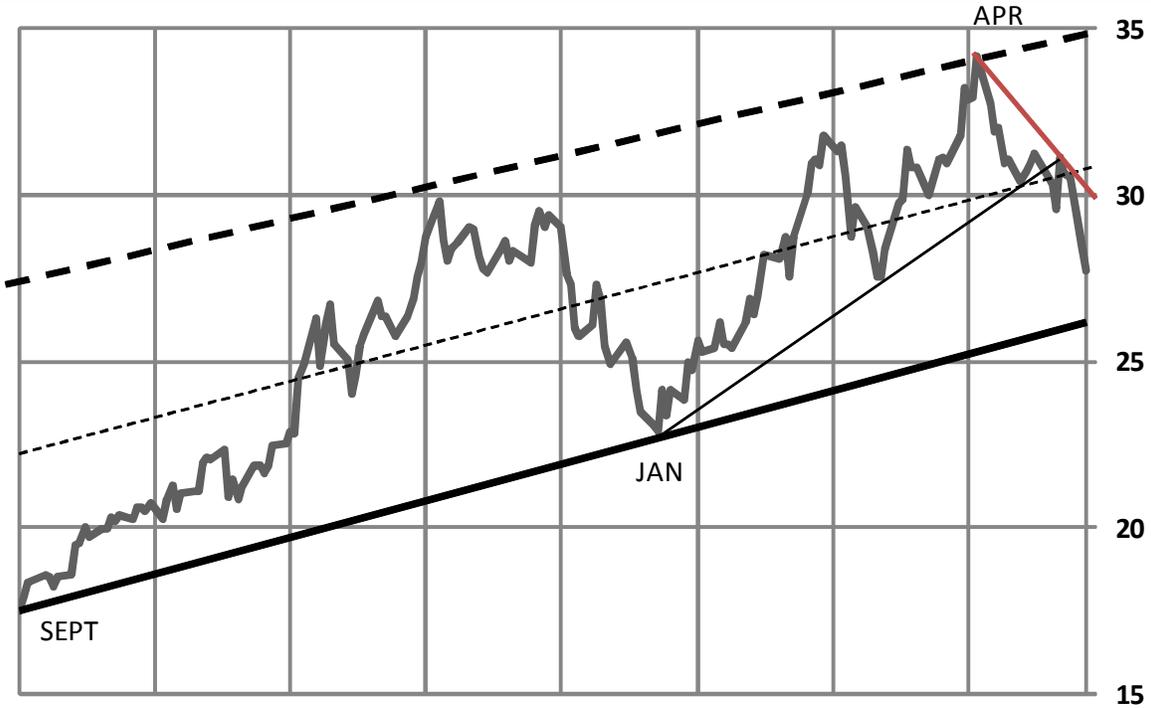

SPINNER (3, 16, 16)

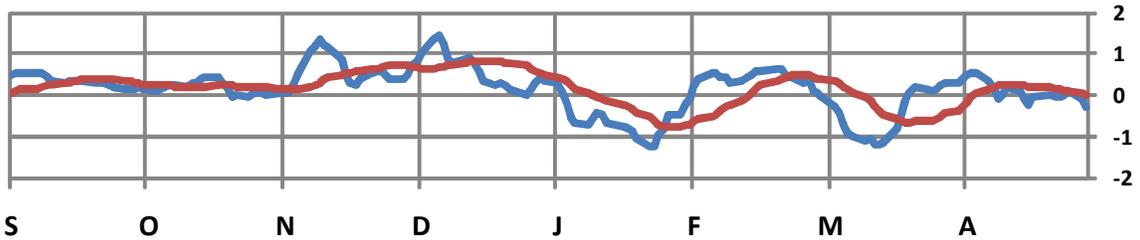

Aden Gold Stocks Advance&Decline Line (SGS A/D) daily chart:

<p>Comment:</p>	<p>Similar to the HUI; our in house Adv/Dec Line continues to decline, breaking below its symmetrical triangle and below the Feb uptrend channel. Not a good sign for gold shares. Spinner moving sideways, starting to break below its medium term MA confirming weakness for gold shares. Will be looking to cash out on profits made and look to buy in at a later date.</p>
-----------------	---

ADEN SILVER SHARE INDEX CLOSE= 27.714

SPINNER (3, 16, 16)

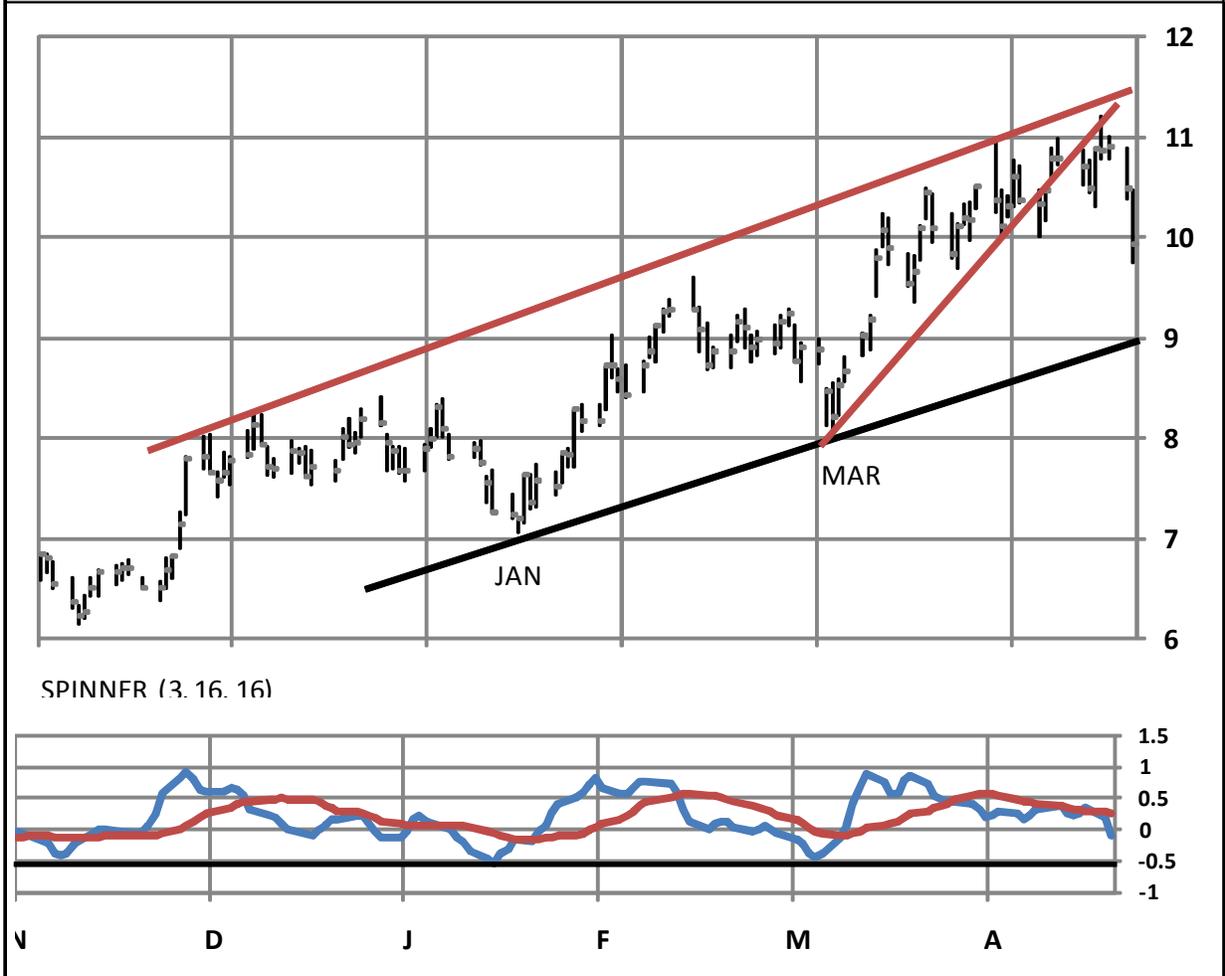

Aden Silver Index (US\$)

Comment: Silver shares are leading silver into a decline. ASSI fell to its Mar low today, clearly breaking its Jan uptrend. It's poised to test its Sept uptrend near the 26 level. Spinner is rolling over with room to decline further. On the upside, a rise above the Apr downtrend line after a 2dc above 30 would show renewed strength.

GOLD SHARES

(GRS) GAMMON GOLD DAILY 5/4/11 CLOSE= 9.93

Gammon Gold (NYSE: GRS); gold: US\$

Comment:

GRS is starting to break below its 10 level support and it broke clearly below its 25 day MA. Rising wedge pattern has a downside target of 9.35 which coincides with GRS's 75 day MA and Jan uptrend line. If GRS can hold at this level after a decline, it would be a good buying area. Spinner below its medium term MA indicating that GRS is poised to decline further.

(G-TO) GOLDCORP DAILY 5/4/11 CLOSE= 48.69

GoldCorp (Toronto TSX: G-T; NYSE: GG); gold: CAD\$

Open trades:	Long at:	Bought a bit at 47.50 (US\$49.50) (Mar-3-11), 47.75 (US\$48) (Mar-25-11) and 50.60 (US\$53.75) (Apr-6-11). Took some profits at 53 then sold half at 52.25 :)
	Stop:	S/T: 2dc below 50; M&T: 2dc at or below 39 (adjusted).
	Profit targets:	54 (almost reached!) &/or 56
New Recom:	Sell the rest of your position at mkt. Buy again after a 2dc above 54 or after a close that holds above 45.	
Comment:	For the first time since Jan, G.TO broke below the Jan uptrend line after 1dc. Spinner is on the decline with room to fall further. Not a good sign of strength. We will continue to follow it as it has proven to be a great stock, but for now will stay out and buy new positions on weakness or on a clear breakout.	

(NGD) NEW GOLD DAILY 5/4/11 CLOSE= 10.19

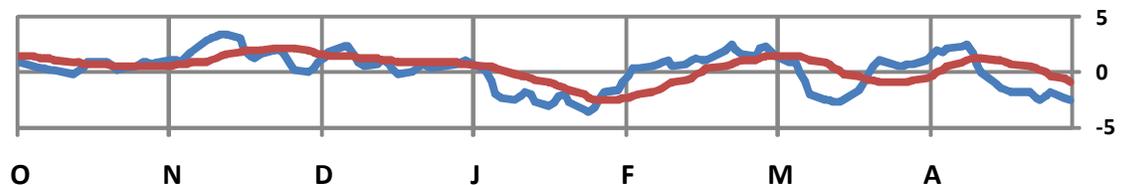

New Gold Inc. (AMEX: NGD); gold: US\$

Open trades:	Long at:	Initial Entry: 11 (Mar-23-11) and 11.70 (Mar-31-11)
	Stop:	S/T: 2dc below 10 (adjusted); M/T: 1dc below 8.
	Profit Target	12 (adjusted) &/or 13.
New Recom:	Keep positions. Sell half if our next profit target is reached.	
Comment:	NGD broke below the Jan uptrend line after rising near the 11.50 area. A dip of over 10% in just a couple days reflects the volatility in the market. Spinner is still above its medium term MA which is a good sign of strength. Other indicators however are showing NGD near oversold areas, meaning we may see it decline a little further. The Oct uptrend line is strong support above 8. If NGD holds at this support, it would be a good buying area. Keep your positions for now.	

(PAA - T) PAN AMERICAN SILVER DAILY 5/4/11 CLOSE= 32.15

SPINNER (3, 16, 16)

Pan American Silver (Toronto TSX: PAA-T; NASDAQ: PAAS); silver CAD\$

Open trades:	Long at:	Initial entry price: 38.55 (US\$39.80) (Mar-2-11).
	Stop:	S/T & M/T: 2dc at or below 32.
	Profit Target	44 and/or 48
New Recom:	Keep positions. Look to buy only after a 2dc above the April downtrend line above 39.	
Comment:	Continues declining steadily with the rest of the silver shares. Continue to hold unless stop loss is triggered. If PAA.T can hold above the 32 level, it could pull back to test the Apr downtrend channel resistance.	

(SLW) SILVER WHEATON CORP DAILY 5/4/11 CLOSE= 36.91

Silver Wheaton (NYSE: SLW; Toronto TSX: SLW-T) silver/gold: US\$

Open trades:	Positions	Sold all and took rest of profits at 41 :)
Comment:	SLW has been an exciting ride! Some of you had it since Feb last year and almost trippled your holdings! Rising wedge pattern gaining momentum as SLW broke below the 38 level (just below SLW's 75 day MA). Wedge target is at the 34 level. Spinner declining and near oversold. We will look to buy once again at the 34 level. On the upside, look to buy after a 2dc above the Apr downtrend line at 43.	

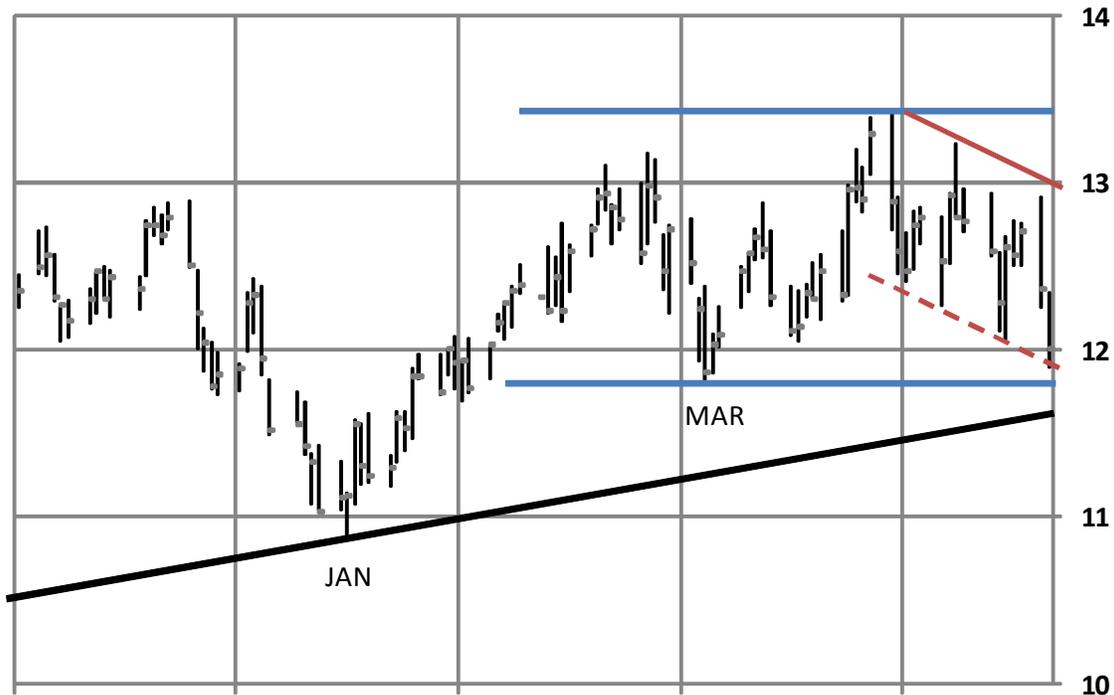

(UXG) US GOLD CORP 5/4/11 CLOSE= 8.07

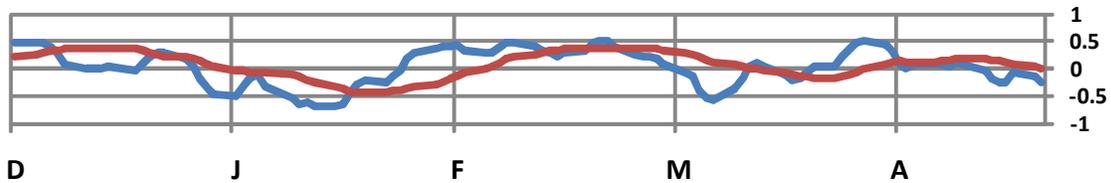

US Gold Corp (Amex: UXG, Toronto TSX: UXG-T) gold&silver: US\$

<p>Comment:</p>	<p>UXG broke below its symmetrical triangle and below its 25 day MA after a 2dc. It could now decline to its 75 day MA currently at the 7.90 level. Spinner is declining steadily and is telling us that UXG is poised to decline further. We are out but look to buy later once SPinner forms a bottom and if UXG can hold above its uptrends at the 6-7 level.</p>
-----------------	--

(AUY) YAMANA GOLD 5/4/11 CLOSE= 12.01

SPINNER (3, 16, 16)

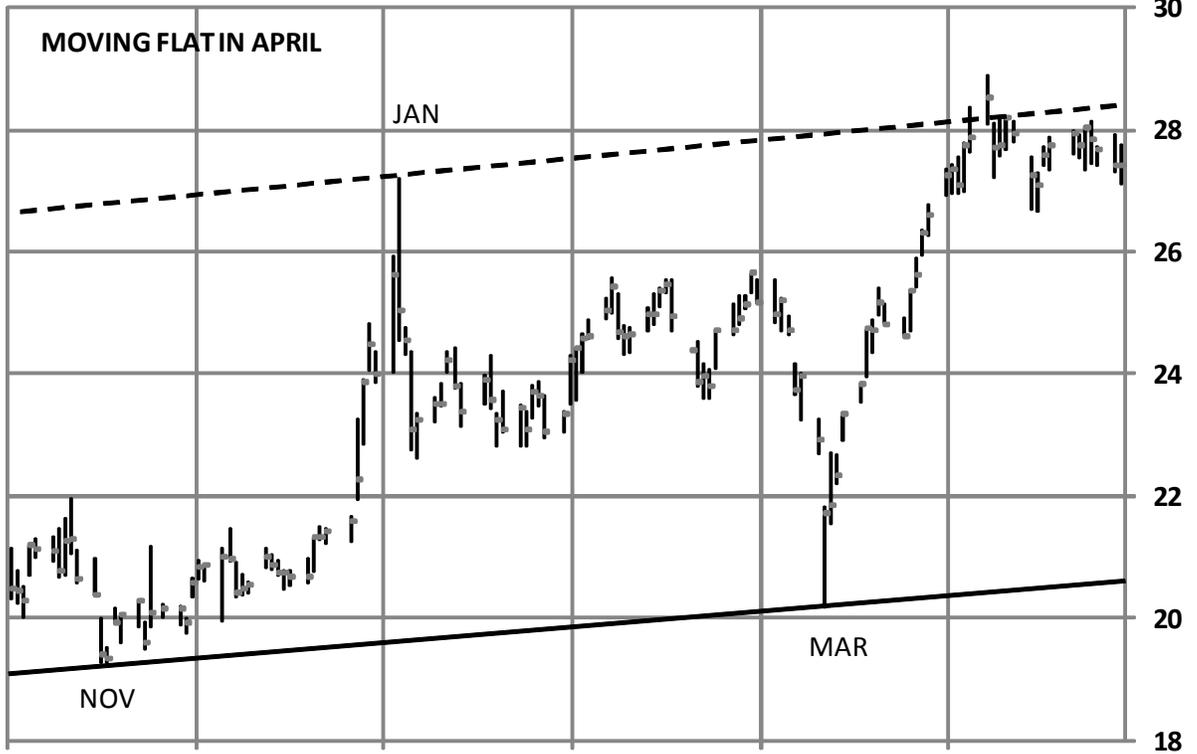

Yamana Gold (AUY); gold: US\$

Open trades:	Long at:	Initial entry price: 12 (Feb 9-11), 12.32 (Feb-23-11), 12.60 (Mar-25-11) and 13 (Apr-6-11).
	Stop:	S/T: 1dc below 11.80 & M/T: 1dc below 11.
	Profit Target:	13.50 &/or 14.

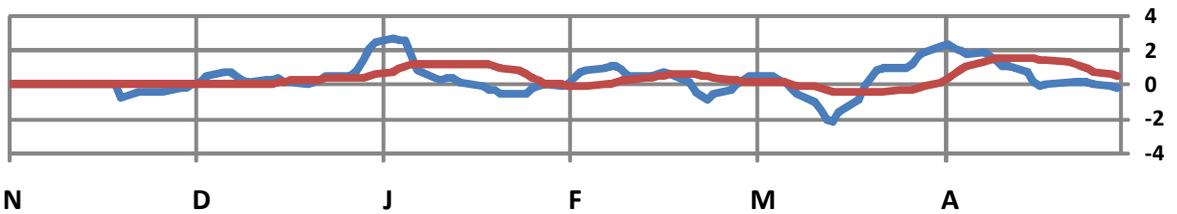

New Recom: Keep your positions.

Comment: AUY has been moving in a sideways band since Mar. It reached a high in Apr and it's been in a downtrend since, where it may find support at the Mar lows at 11.80. Spinner moving downward. Let's see if AUY can hold at the bottom of the band. If so, we could see AUY rise to the top side, or possibly break above it. We are keeping this one for now as it is a good stock to hold through weakness, unless our stops are triggered.

(REMX) MV RARE EARTH DAILY 5/4/11 CLOSE= 27.43

SPINNFR (3. 16. 16)

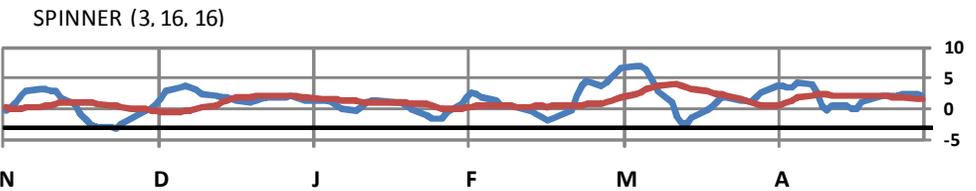

Mkt Vcts Rare Earth (REMX); gold: US\$

Comment:

Since taking profits near the highs, we are watching for the next good entry point. Has found strong resistance at the top side of the Nov uptrend channel, as it been unable to clearly break above the 28 level where it currently holds. Must see a break above the top side of the channel for renewed strength. Look to buy after a 2dc above 29 or after a decline that holds at the Nov uptrend line, near 21.

FUTURES

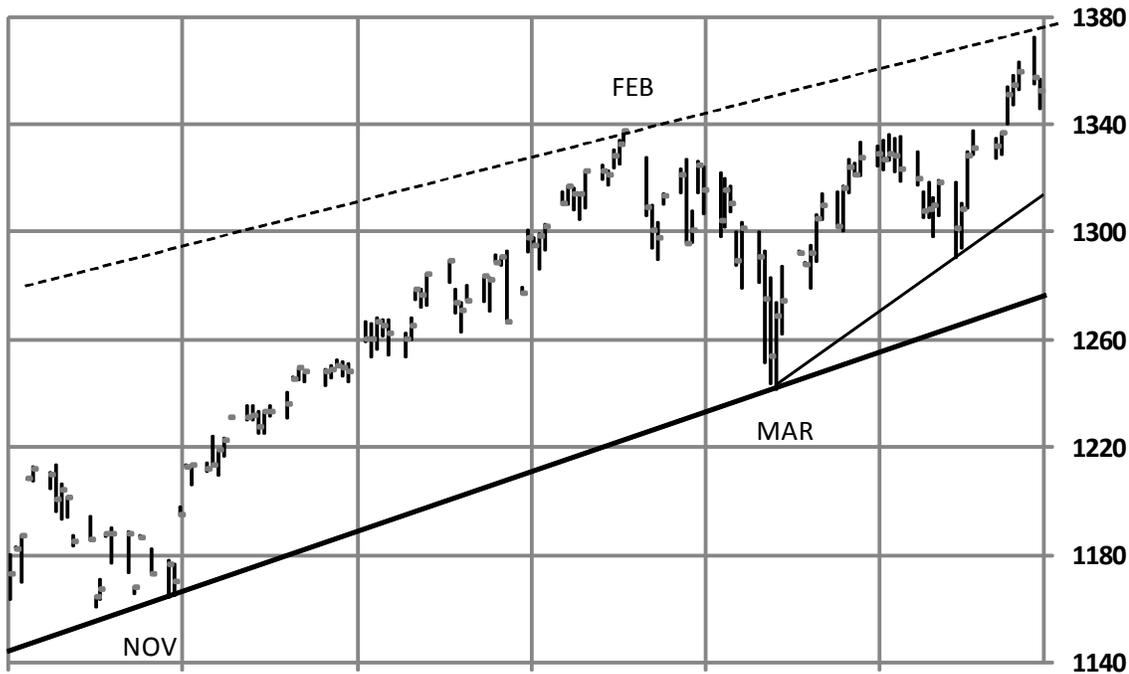

(CL2011M) LIGHT CRUDE OIL DAILY 5/4/11 CLOSE= 111.05

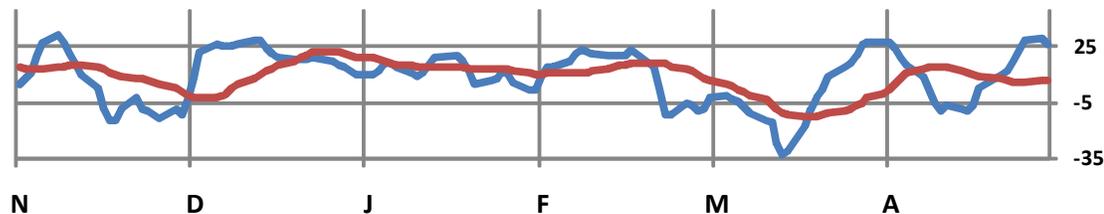

Crude Oil NY May 2011 futures - daily chart:

Open Positions	Long at:	Entry Level: 96 (Feb-23-11) and at 109 (Apr-6-11). Took profits at 112.50 ;)	
	Stop:	S/T: 2dc below 110 (adjusted) M/T: 2 dc below 102	
	Profit targets:	115 (almost reached!)	
New Recom:	All sell more at mkt! Keep only a maximum of 25% of your position. Buy new positions at 100 if reached or on a 2dc above 115.50. Sell short after a 2dc below 109, cover half at 104 and all at 102. Place stops 3 points above entry level.		
Comment:	Oil has been doing great! But like everything, we must learn when to take profits and wait for signs to buy again. Crude has found resistance near the 115 level as it forms a rising wedge with a downside target of 104. A clear 1dc break below 110 would confirm wedge pattern. Spinner is moving sideways, and although not overbought, its not not a good sign. We are looking to sell more and bank profits. Keep a small portion of your position. We will look to buy more on weakness or on a breakout.		

(SP2011M) S&P 500 INDEX DAILY CLOSE= 1352.4

SPINNER (3, 16, 16)

S&P500 Index Jun 2011 futures - daily chart

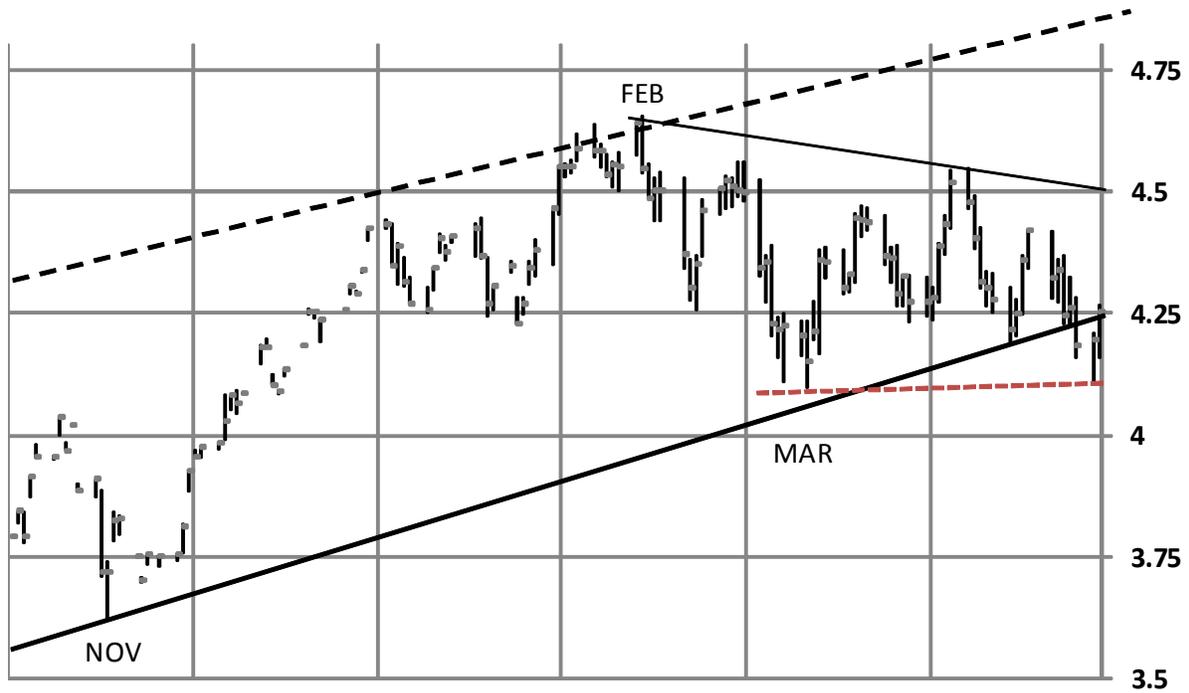

Open trades:	Long at:	Entry: 1349 (Apr-28-11).
	Stop:	S/T: 2dc below 1328 & M/T: 2dc below 1310
	Profit targets:	1400 &/or 1450.
New Recom:	Sell short after a 2dc below 1310 Place stops 3 points above entry level. Look to cover half at 1280 level and cover the rest at 1250 level.	
Comment:	Closed at a 3 year high on Friday! Although we have seen some weakness since then, S&P is still strong above its 25 day MA currently at the 1328 level. Spinner is starting to form a top near the highs telling us that S&P may be correcting soon, specially with the VIX Index near the lows. Keep your positions and look for the signs.	

(DX2011M) U.S. DOLLAR INDEX DAILY 5/4/11 CLOSE= 73.315

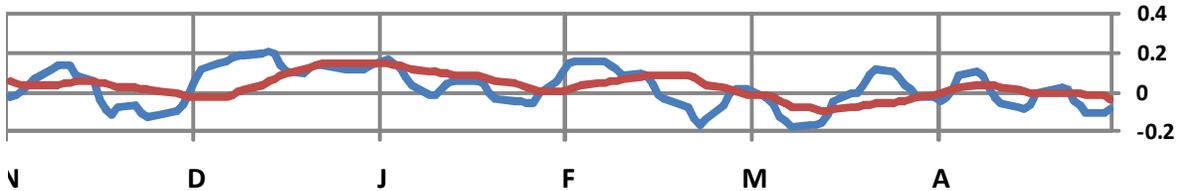

Open Trades	Long at:	Gamblers sold all via stop loss at 73.25 :(
New Recom:	We are out. Buy new positions after a 2dc above 76.	
Comment:	Dollar broke below the 2010 low below 74 and declining steadily within the Jan downtrend channel. Spinner looking to form a bottom at current levels but not out of the woods yet. Dollar very weak below 74 and is poised to decline further before it corrects upward. 71.50 is key support.	

(HGN2011) COPPER DAILY 5/4/11 CLOSE= 4.253

SPINNER (3, 16, 16)

Open Positions	Positions	Entry Level: 4.50 (Apr-11-11)
	Stop	S/T & M/T: 2dc below 4.10.
	Profit Target:	5 &/or 5.25
New Recom:	Keep positions for now. Buy again after a 2dc above 4.55.	
Comment:	Copper broke below the Nov uptrend line but has found strong support at the Mar lows. Spinner looks like bottoming at current levels. Spinner must break above its medium term MA to be out of the woods. Keep your positions as we might be seeing an increase in demand in the resource sector this year with Japan's reconstruction and speculation on China spending heavily on internal infrastructure on top of overall world economic growth.	

“When the Government fears the People, that is Liberty. When the People fear the Government, that is Tyranny.” - Thomas Jefferson

•**Note:** U should NOT feel our recommended prices are set in concrete. If mkts suddenly feel hot or cold to U, or dramatic news occurs, U can buy or sell, or stop at slightly higher or slightly lower prices. It also hinges on your experience level. Some people can use our prices as guides & know when they can take bigger risks.

Spinner: Spinner is an in-house momentum indicator (not always shown on charts). Momentum indicators use the rate of change in price to determine predominant energy flows. Spinner trading signals are generated when the faster timing line crosses above or below the slower confirming line. Upside crosses in the lower range of positive territory offer the most reliable signals for longs; downside crosses in the top range of negative territory for shorts. Avoid trading against the timing line, ie, buying/selling if the timing line is in corrective mode (against direction of trade) unless the confirming line is positioning for a new 'confirming cycle'. It's important to always be aware of location, direction & cycling phase of the confirming line. Spinner signals are more effective in trending mkt's than in trading ranges where indicators such as Stochastics & Williams %R should be used.
