*"We're on the edge of a cliff right now. We have never been here before. If you're still saving money when interest rates are negative, you've got to be crazy. When you're investing for the long-term in the stock market, where there is no connection between stock price and reality, you're crazy" – Robert Kiyosaki –*

## And they all fell down... Finally!

**G**old, gold shares and copper all fell to 10 week lows today. Silver and platinum reached two month lows while crude oil took a plunge. The corrections have begun! A good way to end the month.

### U.S. dollar sets the tone

Janet Yellen set the tone last Friday during the Fed's economic symposium at Jackson Hole. She sent a strong signal that the Fed is preparing to increase rates as soon as September.

This optimism boosted the dollar above its 15wk MA. It extended its rise since May and the dollar index is now showing strength with potential for more upside.

This is why the U.S. dollar index is our chart of the week. Notice the dollar rising within a clean uptrend since the May lows. It broke above a key resistance level at 95.50 (15wk MA) and it's now poised to rise further.

Both leading indicators are backing up the rise by telling us more upside is now likely. This in turn is also suggesting the Fed will most likely keep the positive rate hike in their talk in September.

If so, the dollar index could then rise possibly through the election and for the rest of the year, while the commodities and currencies, and possibly the stock market, decline further. We'll see.

For now, the dollar's next target is the Dec downtrend near 97. But the Fed could be the catalyst that pushes the dollar beyond 97. And as you can see on the chart even

if this strength develops it would still be part of a major topping process.

**Gold, silver, their shares and platinum dropped** as a consequence, confirming a correction that began a month earlier. Gold shares fell the hardest and in a matter of days erased 2+ months' worth of gains as HUI fell below its 15wk MA (245).

We sold half of our gold position before the decline for a good profit; we'll keep our second half, and buy more on weakness.

Interestingly, gold, silver and their shares could still decline further, yet they all remain bullish on an intermediate basis.

Gold has strong support near \$1280, silver near \$17 and HUI at 200.

Interestingly, gold and silver have managed to hold on to their 15wk MAs showing resilience in spite of dollar strength. And although both still have room to fall further without turning bearish, if both hold at their 15wk MAs at \$1310 and \$18.50, respectively, they'll prove to be extremely bullish with handsome upside ST.

Since gold and silver have shown impressive resilience this year, we've adopted a strategy of buying on weakness. Buy on dips at specific price levels, like our guidelines suggest in this edition.

Gold shares are finally giving up some of their incredible strength this year. The chart shows the HUI gold share index breaking below its 15 week MA for the first time this year. It's now weak below

this level, and we could possibly see the 65 week MA tested before this correction is over.

Most interesting is the clear, across the board, decline we're now seeing in gold shares compared to gold, bonds and the stock market. The 15 week MAs have all been violated as you can see on the chart.

**This is healthy. And it's our time to sharpen our buying skills!**

The Fed's hawkish view is happening while key economic indicators remain soft. And while the central bankers' trend of lower to negative rates remains on track. Just this week, Iceland cut its interest rates for the first time in 20 months!

Can the Fed try to change monetary policy that diverges from the rest of the world? Probably not...

**Our positions and strategy**

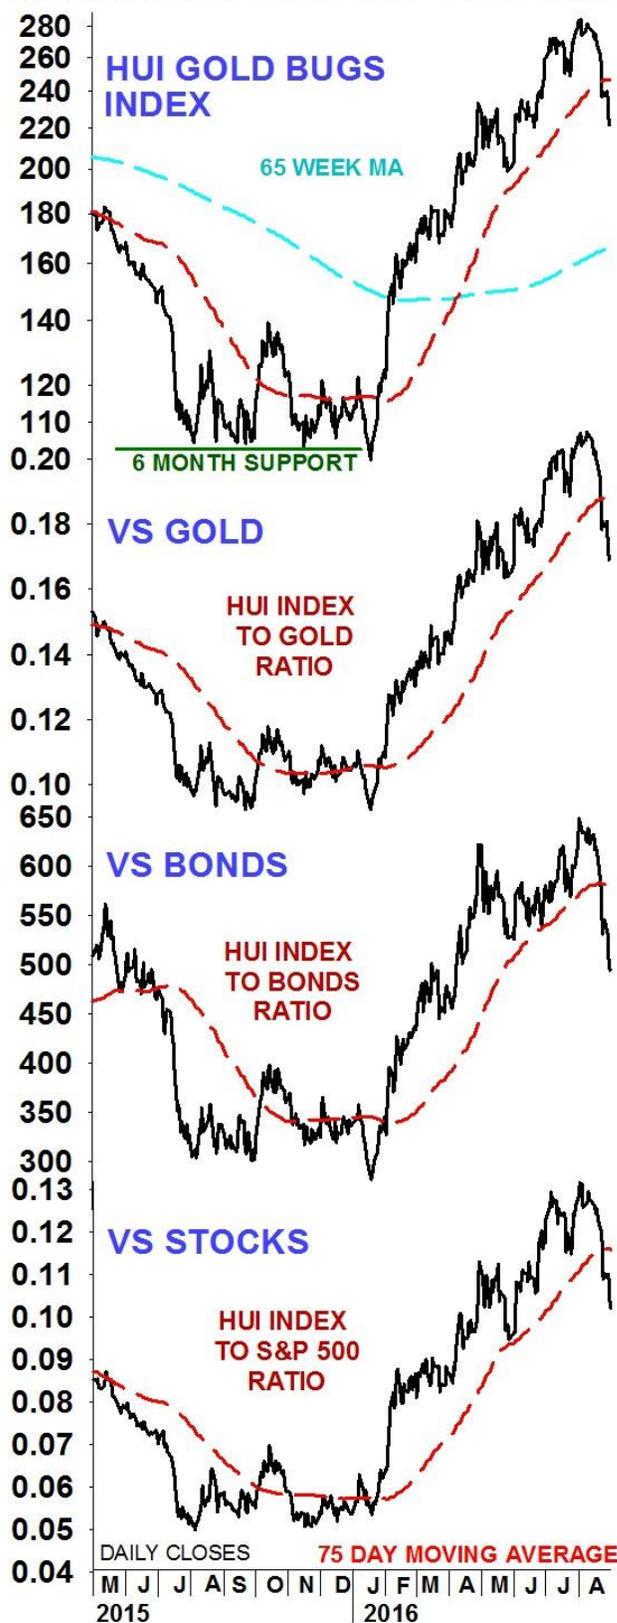

This past week, you managed to take advantage of weakness in most sectors and picked up some silver, near \$18.50, AEM at \$52, PPLT near \$104 and SLW near \$27.

In fact, if you didn't buy these this week, it's not too late to buy some at market.

Although the downside is not necessarily over yet, these are good initial entry levels. We'll also be ready to buy more on further weakness.

The **crude oil story** continues to unfold. And now, it's showing yet another technical pattern with upside potential called a bull flag. Interestingly, its breakout level coincides with the bullish H&S bottom that has been forming since late last year.

**GOLD SHARES:  
FINALLY FALLING OFF PEDESTAL**

With each passing day, the \$50 level becomes increasingly important. A clear

break above it would confirm two bullish patterns, one with upside potential at \$70.

However, if crude fails, it could continue to decline to its next key support near \$40. A break below this level would confirm a bearish H&S top with a downside target in the lower \$30s.

We're keeping our open position to buy XLE on further weakness. It's noteworthy to see fundamentals popping up that could give crude a boost upward.

From talks about Iran being on board to committing to a freeze on OPEC's oil output to an impressive 70% decrease in oil discoveries, are telling us a supply crunch in oil is somewhere near in our future.

The stock market continues to look topy as volatility picks up a bit. The Transportation Averages remains very weak and it'll continue pulling stocks down with it. Plus, speculation of higher interest rates will also affect stocks adversely.

The bond market is quiet but higher interest rates will bode well for a further decline. We're keeping our patience intact to buy UBT at a better value.

**Our strategy this week** is to continue adding to your positions on weakness, ideally near key support levels shown in our chart section below. Keep a close eye on the U.S. dollar's resistance at 97. A clear break above 97 will increase pressure on most assets, and lower lows across the board would be possible.

Good luck and good trading,

Omar Ayales  
Chief **Trading** Strategist

# MARKET LEADERS

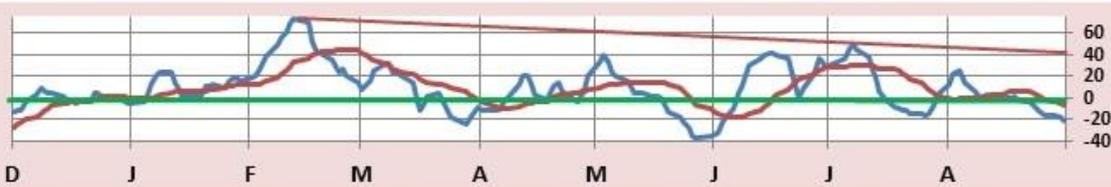

**GOLD DECEMBER 2016 (GCZ16) 8/31/2016 CLOSE = 1311.4**

SPINNER (3, 16, 16)

LED THE DECLINE.. BEARISH BELOW ZERO

Long	1260 (Mar-4 & 7 - 16) (GLD: 121), 1208 (May-31-16) (GLD: 115.50). <b>Sold half at 1335 (GLD: 126.85) for an average 8% gain.</b>
Stop	2dc below 1200 (GLD: 115.50)
Profit Targets	1400 & 1500 (GLD: 133 & 143).
New Long Recom	<b>Keep second half position. Buy some below 1306, more near 1280 and then again on a decline to 1200. Sell all at next profit target.</b>

Breaking down... Gold fell further to its 15wk MA near 1310. It declined to the bottom side of its Jul downchannel showing weakness. Spinner turned bearish by breaking clearly below the zero line with room to continue falling. This means gold is weak ST and downside pressure is likely to remain strong. A clear 1dc break below the 15wk MA will add to downside pressure. On the other hand, notice the bottom side of the Jul downchannel converging with the Dec uptrend near 1300. The Dec uptrend is a key support for gold. If it holds, it'll show impressive strength and gold could then resume its rise to the top side of the Dec upchannel near 1420. Keep in mind, however, gold must break above its key resistance level at 1380 before showing clear renewed strength. You sold half of your position last Wednesday before the fall and should've secured an 8% gain on the first half of your position. Keep the rest for now and get ready to buy more on weakness.

**SILVER DECEMBER 2016 (SIZ16) 8/31/2016 CLOSE= 18.707**

Call Spread:	Dec 2016 bull call spread 24.50/27 at \$500 (Aug-12-16).
Long at:	20.15 (Jul-12-16) (SLV: 19.10), 19.75 (Aug-8-16) (SLV: 18.90), 18.50 Aug-29-16) (SLV: 17.60).
Stop	2dc below 18 (SLV: 2dc below 17.05).
Profit Target	25 & 28 (SLV: 24 & 27)
New Recom:	<b>Keep your positions. Buy more near 18.50 (SLV: 17.60), and lower.</b>

Silver followed gold on a decline to the 15wk MA near 18.50 where it has good support. Spinner continued to decline reaching an extreme oversold level thereby showing limited downside and confirming silver's support level at the 18.50 level. If silver can now hold on to this 18.50 level and rise above 19.50, its ST resistance, it'll show strength that could fuel a rise to its intermediate resistance level near 21. However, if silver breaks below 18.50 on a 2dc, we could see a steeper decline, to possibly silver's key uptrend and support at the Jan uptrend near 17.25. You picked up some silver this week at or near 18.50. If you didn't, it's not too late to buy. We also recommend buying more on a further decline below 18 that holds above silver's key uptrend at 17.25.

**U.S. DOLLAR INDEX SEPTEMBER 2016 (DXU16) 8/31/2016**  
**CLOSE= 96.012**

The U.S. dollar bounced up from the May uptrend showing impressive strength! Hawkish comments from Fed officials fueled speculation that the path for further increases in interest rates remains on course. The dollar broke above its 15wk MA at 95.50 as Spinner turned bullish after holding on to an uptrend of its own since Feb. This tells us the dollar is very strong ST above the May uptrend & support level (94.35), and a rise to test its next resistance near 97 (Dec downtrend) is now likely. The dollar must break above 97 on a 2dc to see reversal potential that could push the dollar to its major resistance level near 101. A stronger dollar could continue fueling downward corrections in most markets, particularly commodities and currencies. We recommend keeping cash in U.S. dollars for now.

# LIGHT CRUDE OIL OCTOBER 2016 (CLV16) 8/31/2016

CLOSE= 44.7

Put Spread Nov 2016 33/30 Bear Put Spread at \$600 (Mar-30-16) & at \$275 (Aug-12-16).

Recom: **Keep put spread for now. Buy crude long on a break above 50 (DBO: 9.25) on a 2dc, or on a decline to Jan uptrend near 42.**

A picture is worth a thousand words... The chart above is full of technical patterns. To be exact, two bullish patterns and one bearish. On the bullish side, crude is forming a bullish H&S bottom and a bullish flag with upside targets at 70 and 60, respectively. The breakout level for both bullish formations is 50. This means a break above 50 on a 2dc would be very bullish for crude. On the bearish side, crude is forming an H&S top as well (in red). The left shoulder at the Mar highs, the head at the Jun highs and the right shoulder at the Aug high. This pattern's neckline and support is near 40. This means a break below 40 on a 2dc would be bearish. Spinner is showing more weakness as it breaks below its MT MA and zero line. We'll remain on the sidelines for now and wait for any of the levels mentioned to be broken before buying long positions or selling short. Potential is evident either way.

**DBO** is a high volume ETF that follows crude. Ideal for those who wish to be in the crude trade but don't have the ability to trade commodities directly.

**CBOE Interest Rate 10 Year T No (^TNX) 8/31/2016 CLOSE= 1.57**

**CBOE Interest Rate 10 Year T No (^TNX) - Chicago options**

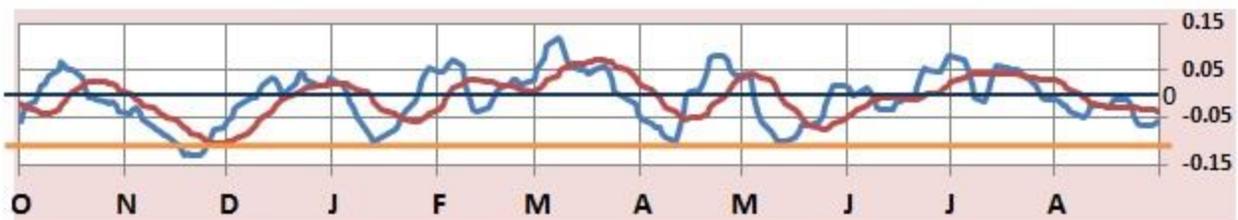

The 10 year yield spiked up after the Fed announced, "the case for raising interest rates is getting stronger." The spike pushed the 10 year yield intraday to its resistance near 1.62%, and thus it continues to form a bullish ascending triangle. If the 10 year yield breaks above 1.62 on a 2dc, it'll show renewed strength and a rise to the Mar downtrend near 1.74 would then be likely. Keep in mind, a break above this next resistance at 1.74 is necessary to see signs of a trend reversal in interest rates. Notice Spinner slightly turning bullish as it separates from its MT MA and the zero line. This confirms interest rates continue to strengthen and higher Treasury yields are likely ST. Keep in mind, rising interest rates support a stronger dollar. Keep an eye on the 10 year yield as an indication to the U.S. dollar index's strength, which in turn would put pressure on commodities and currencies alike.

# COPPER DECEMBER 2016 (HGZ16) 8/31/2016 CLOSE= 2.0775

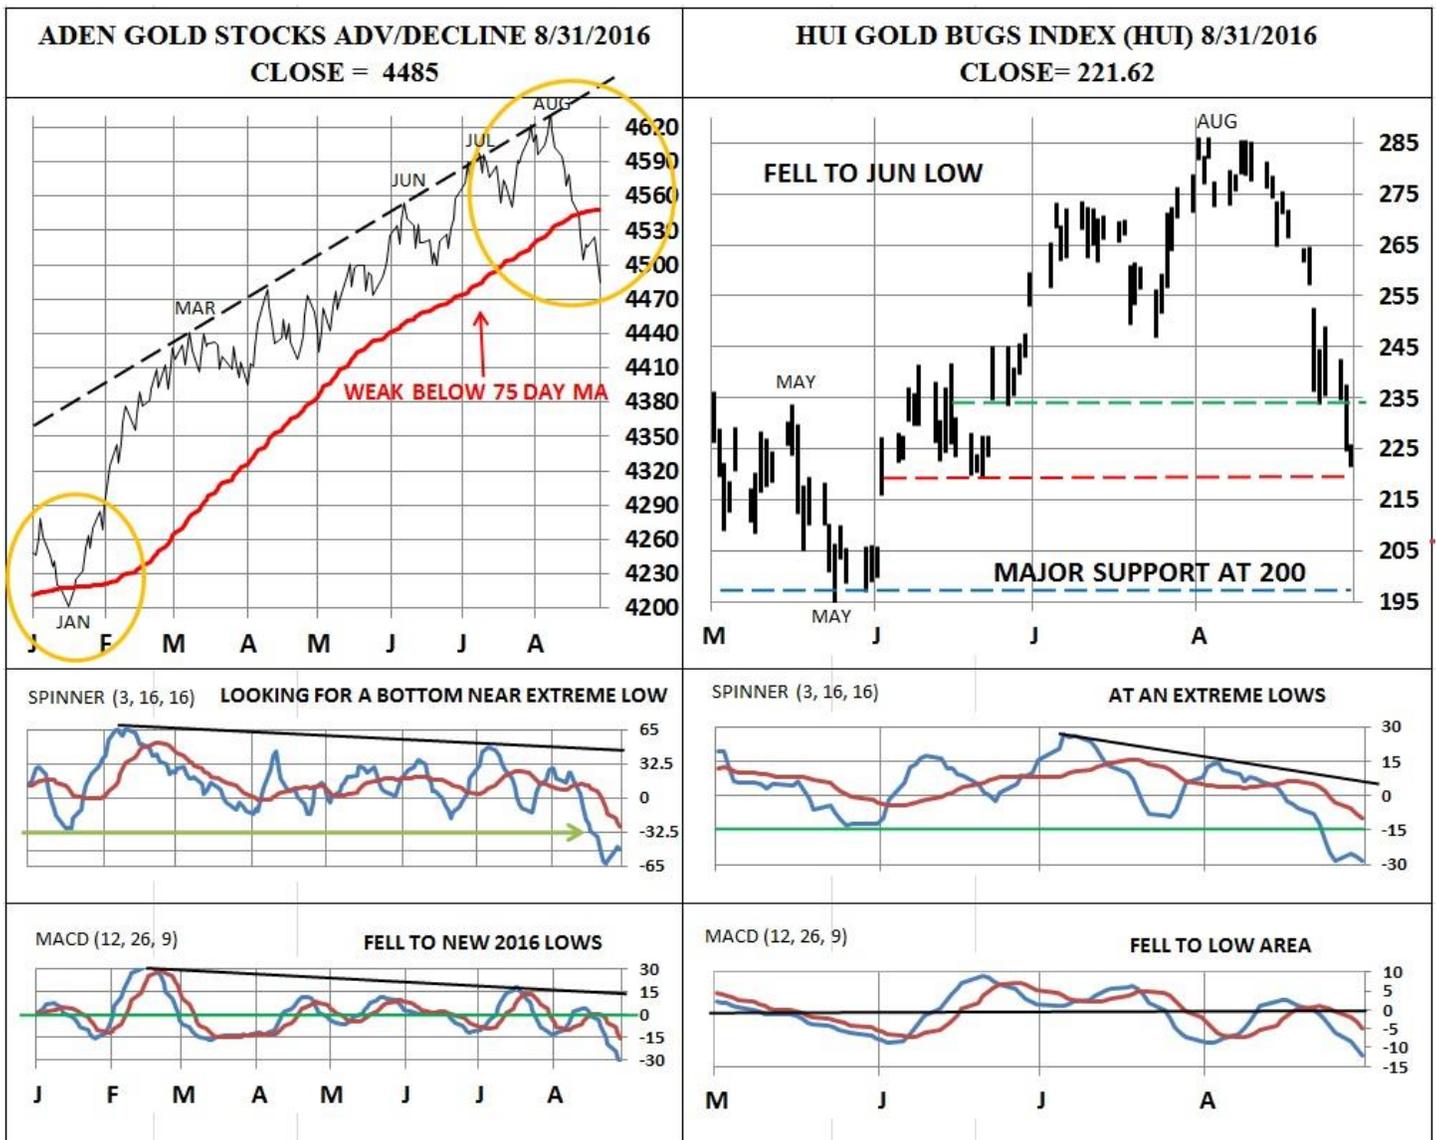

SPINNER (3, 16, 16)

BEARISH BELOW ZERO

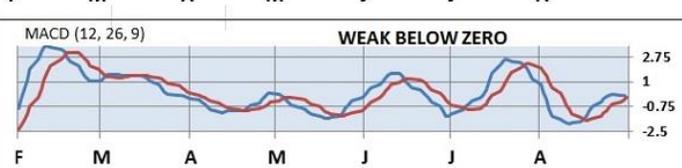

Copper continued to decline. It's now testing the 2.05 Jan uptrend and support level. A key level for copper. If copper breaks below 2.05 on a 2dc, we could see a further decline that could test the Jan lows near 2. However, if copper holds, it'll then likely resume its rise and re-test the Oct downtrend near 2.22. Spinner is bearish near an oversold level. This tells us copper is weak ST and more ST downside is likely. Copper continues to show the world economic recovery's true colors. Weakness persists and the global economy is fragile at best. A sign that interest rates will likely remain lower or negative in the times ahead.

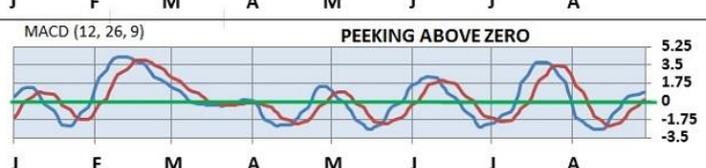

Gold shares have finally given up on their bullish rise, at least for now. The best performing sector in the stock market this year is finally showing weakness as it breaks below key levels. HUI broke below its 15wk MA (246) following a break below the A/D Line's own 15wk MA. Gold shares are officially in correction mode and its decline could deepen further still. HUI has some support at 217 and rock solid support at 200. Notice Spinners are at extreme lows as they continue to decline showing momentum ST has clearly shifted from bullish to bearish. Keep in mind, gold and gold shares are at the onset of a cyclical bull market within a secular bull market. This means you should take advantage of lower prices to buy more gold shares. This week, you should've picked up some AEM. We'll continue to buy more as weakness unravels and a clearer bottom is exposed.

**SPDR DOW JONES INDUSTRIAL (DIA) 8/31/2016**  
CLOSE= 183.94

**Shares Transportation Average (^IYT) 8/31/2016**  
CLOSE= 141.73

New Recom

**Stay out.**

The stock market is showing signs of exhaustion. The Industrial Average remains in a downtrend since reaching its high in Aug. The highs are less pronounced and volatility is picking up near the highs. A sign that downside pressure is increasing. Moreover, the Transportation Average also remains weak as it failed once again to rise above its double top resistance, and reinforcing the July downtrend. This weakness continues to put a damper on the rest of the stock market. Spinners turned bearish after showing signs of strength. MACD are showing some resistance near a key breakout level. All signs of weakness. Keep in mind, higher interest rates will continue to put downside pressure on stocks as higher yielding bonds will compete for a piece of the pie. We'll continue to hold on to our position in SDS as downside risk outweighs upside potential in stocks.

# STOCKS

**PROSHARES ULTRASHORT S&P500 (SDS) 8/31/2016 CLOSE= 16.48**

**ProShares UltraShort S&P500 (SDS)-NYSEArca**

Long at: 18.90 (May-4-16), 18.55 (May-11-16), 18.85 (May-18-16), 18 (Jun-2-16), 18.30 (Jun-15).

Recom: **Sell at 18.50 or better. Speculators nibble.**

SDS continues to form a bottom near the lows. SDS is also forming a mini symmetrical triangle between the Jun downtrend and the recent Aug uptrend. A clear break above 16.50 on a 2dc would show first signs of strength. A break above the top side of the Jul downchannel on a 2dc above 16.75 would confirm strength that could fuel a rise to the Jun highs. Spinner is peeking above zero confirming upside potential. We recommend keeping your positions for now as stocks remain ripe for a correction. Speculators may want to nibble.

## Agnico Eagle Mines Limited (AEM) 8/31/2016 CLOSE= 50.65

SPINNER (3, 16, 16)

**LOOKING FOR A BOTTOM AT EXTREME OVERSOLD**

### Agnico Eagle Mines Limited (AEM) - Nyse

Long at:	52 (Jun-27-16), 52 (Jun-28-16) Sold half at 59.50 for a 14.5% gain! 52 (Aug-24-16)
Stop:	2dc below 49.50 (adj).
Profit Target	60 & 70
<b>New Recom:</b>	<b>Keep your position.</b>

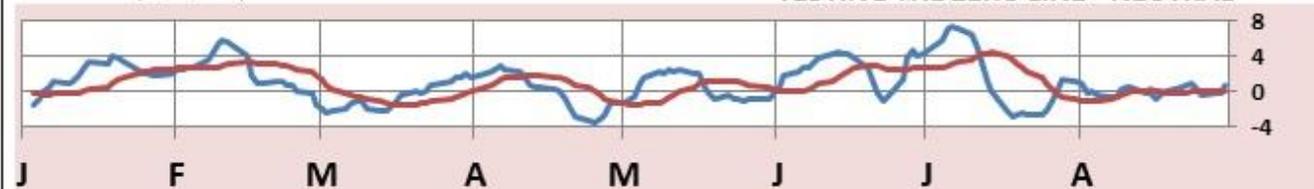

AEM broke below its bullish Apr uptrend this past week and fell to the July lows near 50 as gold share weakness continued. AEM is now near a ST support level while Spinner looks for a bottom at an extreme oversold level. This tells us AEM has strong support near 49 and if it holds, AEM could rise again to the Aug highs at 60. On the other hand, a clear break below 49 would expose increasing downside pressure and a decline to the mid-to-lower 40s would then be likely. We recommend holding on to your position for now as the downside seems limited ST. We'll buy new positions when ST clears.

**PROSHARES ULTRA 20+Year Treasury (UBT) 8/31/2016 CLOSE= 99.8**

SPINNER (3, 16, 16)

TESTING THE ZERO LINE - NEUTRAL

**ProShares Ultra 20+ Year Treasury (UBT) -NYSEArca**

**New Recom:** Buy some on a decline to 96.50 and more near 93. Place stops at 2dc below 90. Profit targets at 106 & 120.

UBT continues to trade within a narrow trading range while it continues to form a symmetrical triangle between 101 and 98. A 1dc break above 101 would likely fuel a rise to the Jul highs, initially, while a break to the downside could push UBT to the Jan uptrend near 92. Spinner continues to resist at zero showing some weakness. Hawkish statements from the Fed will continue to boost interest rates, which in turn would add pressure on bonds. We continue to believe bonds still have room to rise further. We recommend staying on the sidelines for now and wait to a decline that holds above the Jan uptrend before buying.

## Energy Select Sector SPDR ETF (XLE) 8/31/2016 CLOSE= 68.51

### Energy Select Sector SPDR ETF (XLE)

Long at: 69.60 (Aug-22-16). Sold at 69.75 for no gain.

New Recom: **Waiting for weakness to buy; ideally near 65.**

XLE pulled back after breaking above the top side of a 4 mo sideways band. It's resisting and declining from both, the highs and the top side of the band. It now looks like last week's rise was a bull trap. If XLE now stays below this resistance level in the following week or so, weakness will take over and push XLE to the bottom side of the band near 65. Once XLE breaks above Aug high it'll resume its bullish rise of 2016. Spinner vulnerable below MT MA, but may be forming a bottom above zero. This tells us momentum remains to the upside but could shift if Spinner declines below zero. Stay out for now; wait for more weakness to buy.

**ETFs Physical Platinum (PPLT) 8/31/2016 CLOSE= 100.7**

**ETFs Physical Platinum (PPLT)**

Long at:	104 (Aug-24-16).
Stop:	2dc below 96.
Profit Target:	120 & 135
New Recom:	<b>Keep your new position. Buy more below 101 and lower.</b>

Platinum continued to decline after breaking below the upside wedge pattern. It reached our initial entry level while Spinner approaches an extreme oversold level. This tells us the downside is likely limited to the Jan uptrend near 99, and it confirms a very strong PPLT above the Jan uptrend. If it now holds, PPLT will be positioned to rise to the top side of the Jan upchannel near 118 initially. On the downside, if PPLT breaks clearly below the Jan uptrend on a 2dc below 99, it'll trigger a trend reversal that could push PPLT to the Jun lows near 93. Keep your position and add to your position on dips that hold above 98.

**Silver Wheaton Corp. (SLW) 8/31/2016 CLOSE= 25.33**

**Silver Wheaton Corp. (SLW)**

Long at:	27 (Aug-24-16)
Stop:	2dc below 23
Profit Target	31 & 40
New Recom:	<b>Keep your new position. Buy more at mkt.</b>

SLW continued to unwind as it declined from a 3 year high. It's approaching the Jan uptrend near 24 while Spinner reaches an extreme oversold level. This tells us the downside may be limited ST, and some upside is now likely. Moreover, since 2016, SLW has performed well after Spinner reached extreme oversold levels. On the downside, keep an eye on 24, SLW's Jan uptrend. If SLW breaks clearly below this level on a 2dc, a decline to the Jun lows near 18 is possible. We recommend accumulating during weakness.

Quoting *GCRU* is permitted provided *GCRU* name, website address & subscription price are given.

All charts in *GCRU* are daily prices.

Subscribers can obtain free online chart updates for all gold shares in *GCRU* via: [www.bigcharts.com](http://www.bigcharts.com). To view Canadian stks please use CA as prefix (ie, to view Agnico Eagle (Toronto) you must use CA:AEM).

**Note:** U should NOT feel our recommended prices are set in concrete. If mkts suddenly feel hot or cold to U, or dramatic news occurs, U can buy or sell, or stop at slightly higher or slightly lower prices. It also hinges on your experience level. Some people can use our prices as guides & know when they can take bigger risks.

**Spinner:** Spinner is an in-house momentum indicator (not always shown on charts). Momentum indicators use the rate of change in price to determine predominant energy flows. Spinner trading signals are generated when the faster timing line crosses above or below the slower confirming line. Upside crosses in the lower range of positive territory offer the most reliable signals for longs; downside crosses in the top range of negative territory for shorts. Avoid trading against the timing line, ie, buying/selling if the timing line is in corrective mode (against direction of trade) unless the confirming line is positioning for a new 'confirming cycle'. It's important to always be aware of location, direction & cycling phase of the confirming line. Spinner signals are more effective in trending mkt's than in trading ranges where indicators such as Stochastic & Williams %R should be used.
