## **ANOTHER INCREDIBLE WEEK!**

Gold touched a record high intraday today at \$1,923.70. Gold shares were also boosted higher while the commodity markets as well as the U.S. and world stock markets took a dive. The European debt crisis and the stubbornly high unemployment in the U.S. continue to dominate the markets as fear of an even slower global economy remains the growing concern.

The Swiss took the bull by the horns today to halt the soaring Swiss Franc as the central bank (SCB) imposed a ceiling on the exchange rate for the first time in three decades while pledging to defend the target with the "utmost determination". The Swiss Franc fell the most ever versus the Euro on the announcement which was similar to the measures taken in 1978 to stem the Franc's rise versus the Deutsche Mark.

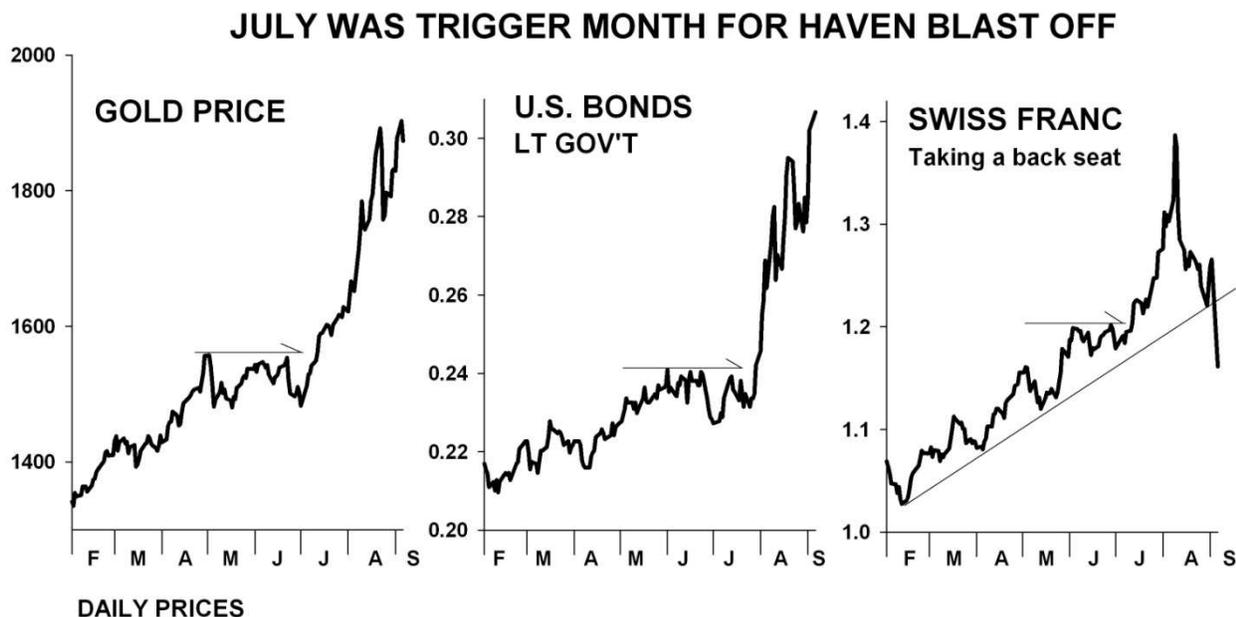

This also put a damper on all of the currencies in general while the U.S. Dollar got a good boost. In fact the most promising boost for the dollar in many months. Meanwhile, it also affected gold's stellar rise as it closed lower than its intraday record high.

At the same time the Swiss pegged their Franc to the Euro, Europe is considering fundamental changes in the 17 nation union. It could resemble the United States of Europe with powers of taxation, bond issuance and budget approval among other things which could be a start for an ailing Europe.

Meanwhile, the markets will continue to be dominated by the global economy until some sort of relief is perceived. Safe haven markets have been the winning markets, especially this summer. The chart shows this clearly.... the gold price, U.S. bonds and the Swiss Franc since last February.

First, you can see that July was a key month when safety took off like a bandit. Initially it was gold when it started to soar on July 1st. The Swiss Franc and bond market followed when fear and safety grew. They all soared together and gold and bonds continue to soar as we go to press.

Interestingly, you can see government intervention. The strong Swiss Franc has been hurting the economy, and this strength was the straw that broke the camel's back. The Swiss Franc and Yen have been the best currencies but you can clearly see that gold now stands alone as the ultimate currency, much like it did in the late 1970s.

But what about bonds? Yes, bonds have surprised many when they jumped up in late July, on safe haven buying as yields fell. Today, the 10 year yield fell to a record low as bond prices rose.

But even as strong as bonds have been of late, gold is still the better investment on a relative strength basis. The developed world is trying to keep their yields down while bond rise, and that means many bond markets around the world are rising as well, yet the gold price are the better investment.

The gold price is in its eleventh year of a bull market which is the longest winning streak since at least 1920. It's up well over 30% this year which outperforms commodities, Treasuries and the global stock markets.

This means we'll stay with our positions for as long as the rise lasts. We are faced with a historically serious situation that is very difficult to resolve while entering the Fall time period when demand is strong, yet gold has risen so far so fast, it seems like a correction would be healthy at this time.

The world is not healthy overall which is why we'll stay with our position for as long as we should. Meanwhile, we've taken great profits in several of our gold shares. And as you'll see in the following pages, we are doing well.

On each of our individual gold shares, you'll see we've added the exchanges and symbols that trade the particular share so you can buy and sell these shares from around the world.

**TECH TALK:** Once again, gold has risen to the \$1900 level reaching new intraday record highs, which is amazing, yet it continues to be an important psychological resistance level as gold has been unable to break above it on a 2dc.

Yet again, gold is making an important case for \$2000 or bust. If gold breaks above this psychological resistance, it's likely to rise to the \$2000 mark or higher. On the other hand, if it continues to resist near the \$1900 level, we'll likely see it decline to its 75 day MA near the \$1640 area.

There's a stronger case to be made for gold reaching \$2000 than to bust. Demand for gold around the world is still there, and it'll keep growing as countries around the world take measures to resolve their debt issues.

Plus, purchases for gold in the Middle Eastern countries, India and China will continue during the festive months of the year. Remember, historically these are gold's best months and we have no reason to believe that it'll be different this year.

The Spinner, one of our leading indicators, fell to near oversold levels during the decline two weeks ago. Since then, it has bottomed, it's started to rise to meet its M/T MA and it's looking poised to break above it. A break above would signal more bullish action for gold in the short term, telling us that gold will likely break above the \$1900 level resistance and rise to \$2000 or higher.

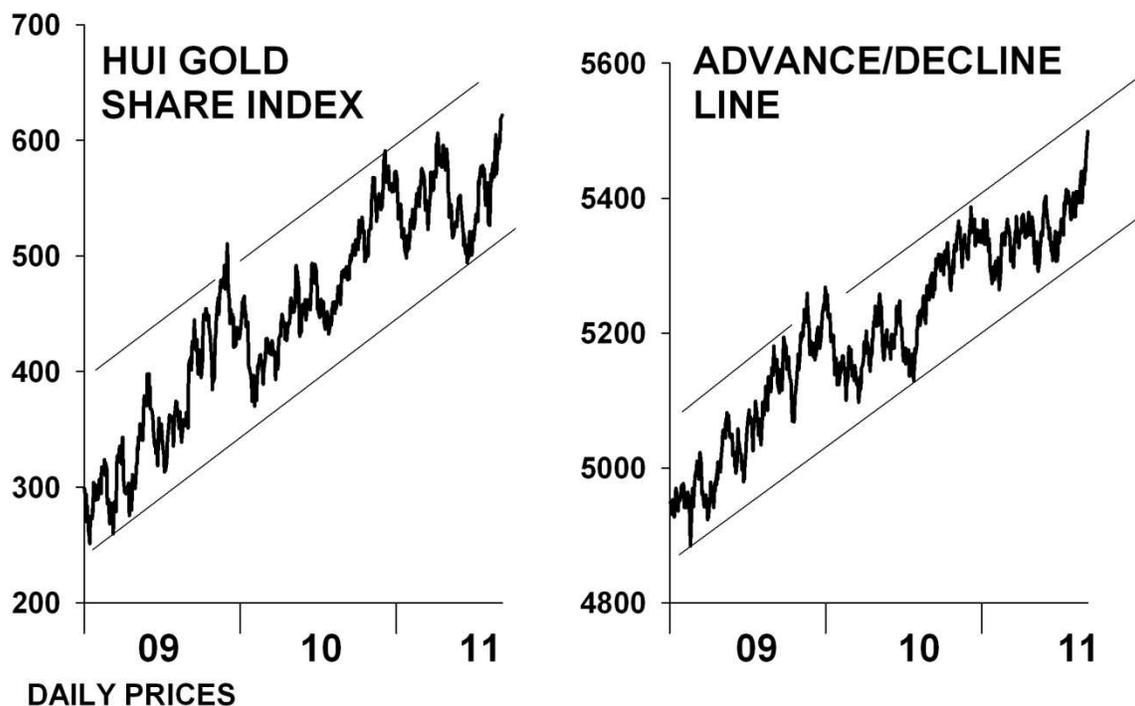

Gold's 25 day MA, an important ST trend for the move, is currently at \$1790, confirming that gold is super strong above this level. The 75 day MA at the \$1640 level is gold's next intermediate support.

Interestingly, volume has been a bit choppy as it's been similar during rises and declines. An important difference is that the declines have not been significant and have tended to be similar to the previous day's closes. But the rises have been more significant, confirming increasing demand for the metal at current prices.

However, a hint or speculation about the economic recovery could put a damper on demand for gold as a safe haven asset, removing some of the excess that has built up in gold's price. Here's where we must be careful and make sure we sell at the right time to protect our profits. This rise after all has been great and a breather would be normal.

A first sign of weakness would be if gold breaks below its 25 day MA at \$1790 on a 2dc. If this trend is clearly broken, we could see gold test its 75 day MA at the \$1640 level. A clear 2dc break below this level would confirm a reversal in the intermediate trend. A decline to gold's next major support at the \$1470 level would then be possible in a more severe downward correction.

## NEW HIGHS!

For now, however, underlying strength in gold can also be seen through the strength in gold shares. HUI broke clearly above both a year long sideways band and the top side of the June upchannel, showing impressive strength for the move. HUI is not yet overbought and it's showing that it still has room to rise further as it constantly reaches new highs.

Action on the HUI is being confirmed by our in house Adv/Dec Line as it broke above old highs and into new territory. The Adv/Dec Line reached the top side of the June upchannel and it's looking very strong at current levels.

But the Spinner has reached overbought levels. Nevertheless, it has not formed a top yet, telling us that the rise for gold shares may not be over, but it is fast approaching overbought levels. Still, HUI is very strong above the 575 level, and it has support at the June uptrend line at the 540 level. A break below these levels would signal weakness in gold shares.

We have been taking profits and this week we've taken more and we'll continue to do so as gold shares reach overbought levels.

Our best performers have been G.TO with a 15% gain for the second half of our position and NGD with a 20% gain for the rest of our position. We also purchased ELD.TO, which in a week's time has brought in 10% profits on part of our position. Our other positions are still looking good and we'll be looking to sell when profit targets are reached.

Silver has held up strongly above its 25 day MA, above the \$40.50 level, despite sideways movement. Its Spinner continues to move above its M/T MA, reaffirming strength in silver behind the move.

Silver shares have been looking good as well. For the most part, they've broken above important resistance levels. ASSI broke above its July highs reaching nearly a 4 mo high. The Spinner for ASSI continues to move upward, above its M/T MA with lots of room to rise further.

Our positions are doing well. SLW broke above the \$40 resistance level and it has stayed above it since then. PAA.TO and SSRI have also broken above the \$32 and \$30 levels, respectively, and they're looking strong for the move.

*So what does this tell us?*

Keep your gold and silver positions. Update stops to protect profits made for now. Be ready to take profits. Keep your shares, gold and silver, but look to sell when the next profit targets are reached. The following charts and talk will guide you through each stock and futures market.

●●●● Golden regards from *the Adens... Pamela, Mary Anne, and Omar*

●●●● If it's Wednesday, it's *Gold (& Mkts) Charts R Us*

**GOLD DEC 2011 (GCZ11) 9/6/11 CLOSE = 1873.3**

Open trades:	Long at:	Entry level: 1530 (July-8-11), 1585 (July-14 and 20-11), 1875 (Aug-22-11) and 1775 (Aug-26-11).
	Stop:	S/T: 2dc below 1790 (adjusted); M/T: 2dc below 1640 (adjusted)
	Profit targets:	2000 &/or 2200
New Recom:	Keep your positions. All look to sell short after a 2dc below 1750. Cover all at the 1600 level.	
Comment:	Here we go again! Gold has risen once again to test the 1900 psychological resistance level. Gold must break above the resistance after a 2dc to confirm renewed strength for the move that could take gold to our next profit targets. Spinner has risen from near oversold levels and is starting to break above its M/T MA with room to rise further. This implies that a clear gold break above the resistance is likely. Gold is looking very strong above its 25 day MA, currently at 1780. On the downside, if gold is unable to break above the 1900 resistance on a 2dc it'll likely fall back to the bottom side of the May-July upchannel. A break below the July uptrend would likely take gold to test its 75 day MA at the 1640 level.	

## SILVER DEC 2011 (SIZ11) 9/6/11 CLOSE= 41.868

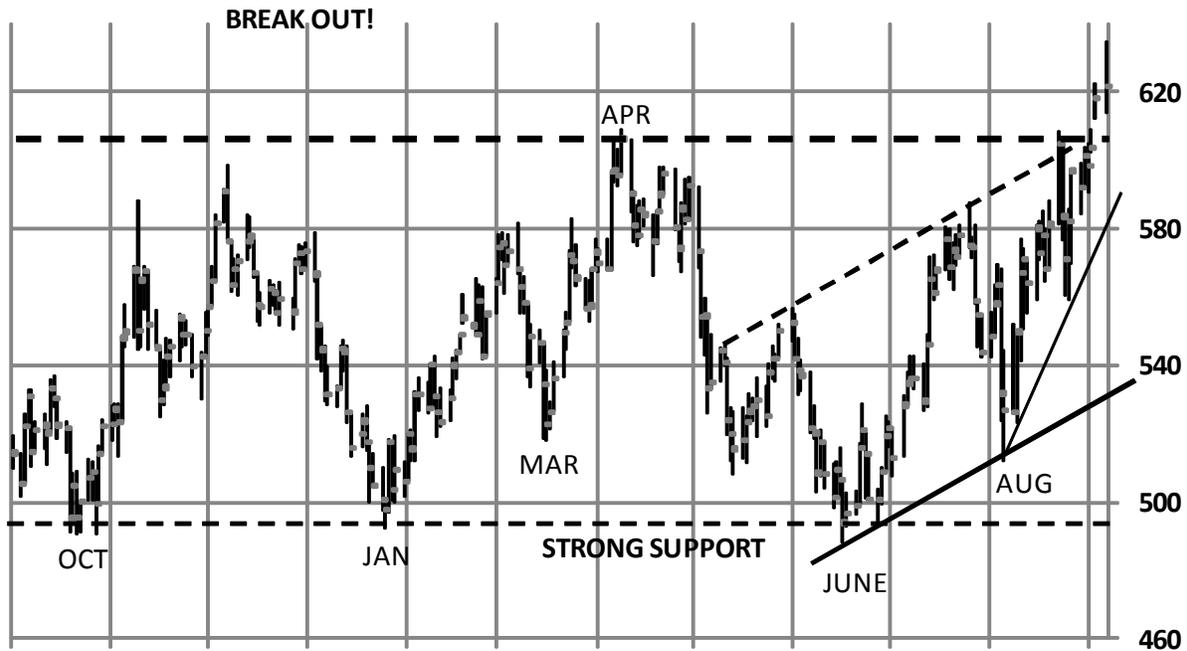

Open trades:	Long at:	Entry Level: 39 (July-18-11), 40 (July-19-11) and 38 (Aug-10-11).
	Stop:	ST: 2dc below 38.50 (adjusted); MT: 2dc below 35.
	Profit targets:	45 (adjusted), 49 &/or 60

**New Recom:** Keep your positions.  
 Gamblers sell short after a 2dc below 38. Cover half at 35 and all at the 33 level.

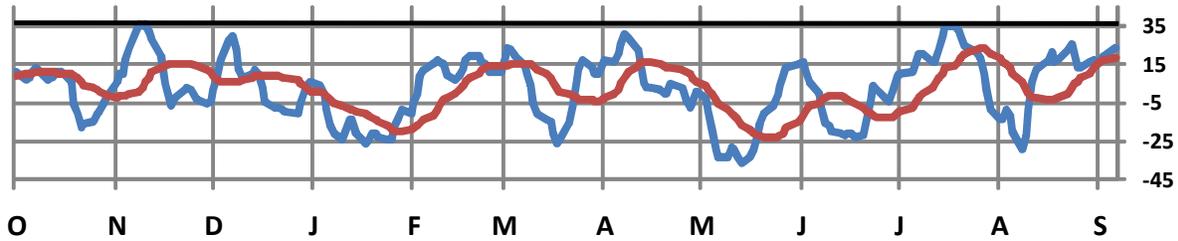

**Comment:** Silver continues to move within the middle of the June upchannel as it quietly gains ground. Silver is looking very strong above its 25 day MA at the 40.50 level and firm above its 75 day MA at 38.50. If silver can break above its current ST resistance, above 43.50 after a 2dc, it'll likely rise to the mid to high 40s. Spinner has room to rise further; a clear break above its MT MA would show us a renewed sign of strength. Weakness in the resource sector is putting some downward pressure on silver. A break below silver's 25 day MA would show a first sign of weakness.

## HUI GOLD BUGS INDEX (HUI) 9/6/11 CLOSE= 621.78

SPINNER (3, 16, 16)

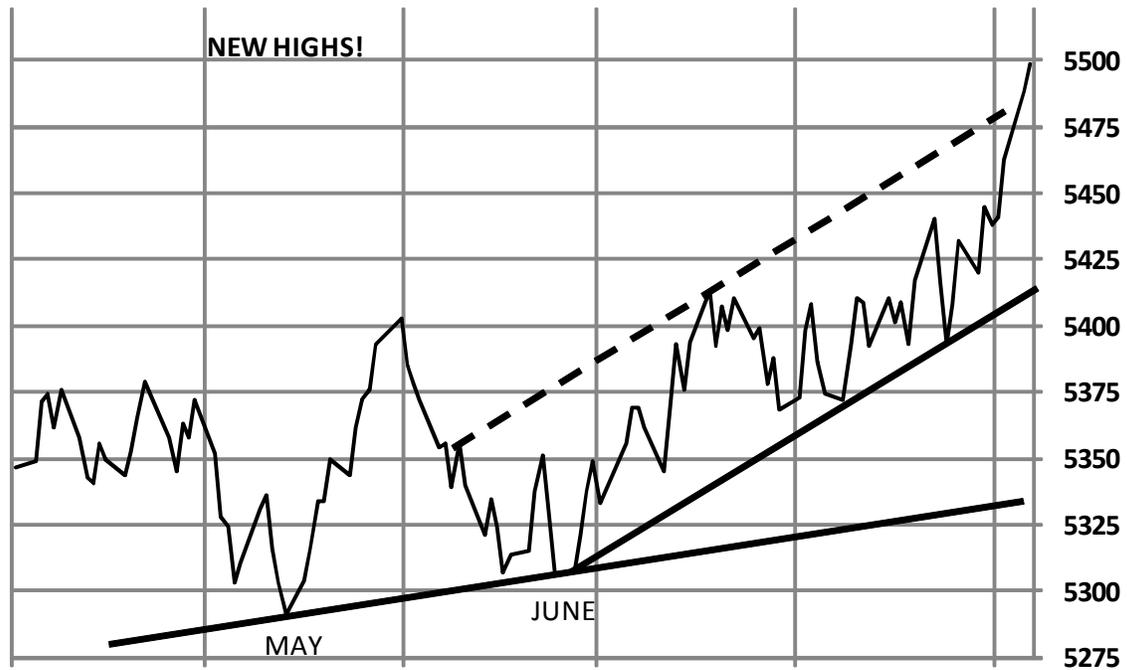

**STRONG ABOVE M/T MA**

Comment:

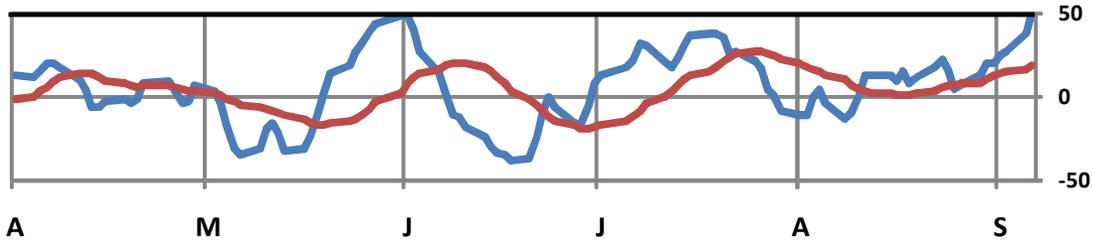

HUI broke out to a new high, above the top side of both the year long sideways band and the June upchannel showing great strength! Spinner continues to look strong as it continues to move above its MT MA with room to rise further. Other indicators showing HUI nearing an overbought area, but still has room to rise. HUI is super bullish above the 600 level and its solid above its 25 day MA, currently at 580 which coincides with the Aug uptrend line. This tells us that we may be reaching an intermediate top area and should be protecting profits. We've been recommending to sell some of your positions to protect profits and keep some in case gold shares jump up higher. On the downside, the 25 day MA is an important trend and if broken, we'll see first signs of weakness and a possible decline to the lower side of the June uptrend line would be possible. If HUI breaks below this trendline, a decline to the major support at the 492 level would then be likely

**ADEN GOLD STOCKS ADV/DEC LINE 9/6/11 CLOSE=5499**

SPINNER (3. 16. 16)

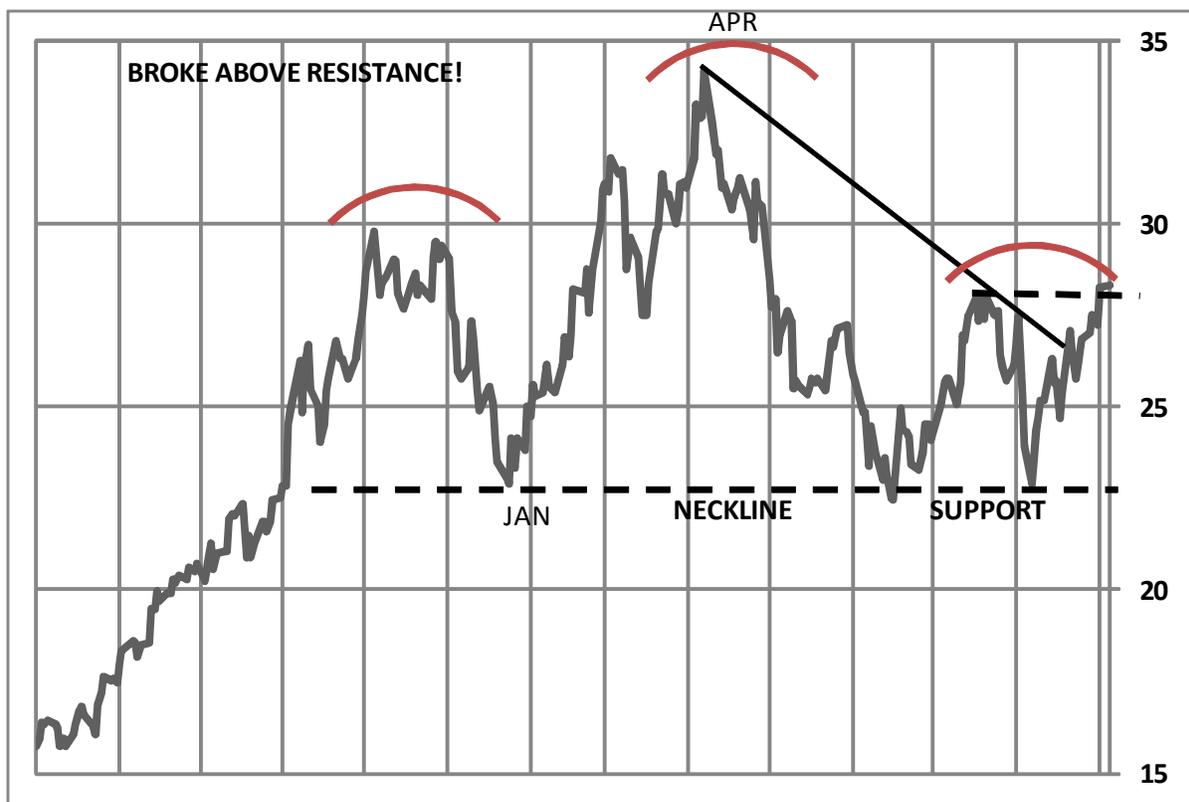

ROSE TO OVERBOUGHT

Comment:

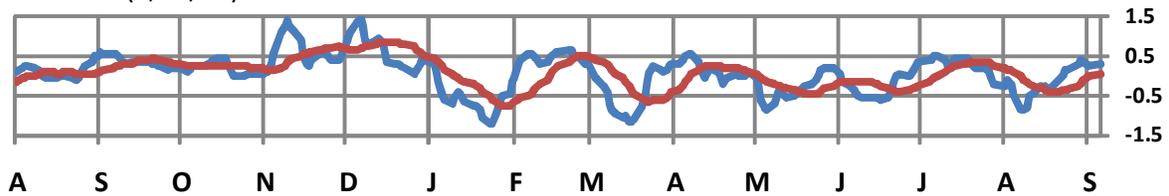

Jumped to a new high breaking above the top side of the June upchannel! The Adv/Dec Line is very strong above its June uptrend line above the 5425 level. Spinner rising and looking strong above its MT MA. Still has some room to rise further, but nearing overbought levels, confirming action in the HUI. This tells us that despite underlying strength in gold shares, the upside potential may be limited and downside potential is increasing. So we recomend taking profits for the move.

**ADEN SILVER SHARE INDEX (ASSI) 9/6/11 CLOSE= 28.312**

SPINNER (3, 16, 16)

RISING ABOVE MT MA!

Comment:

ASSI broke above the July high resistance and reached a 4mo high for the move! ASSI closed above the resistance after a 2dc showing underlying strength behind the move. Spinner above its MT MA and looking bullish. All good signs of strength. On the downside, if ASSI continues to resist at current levels, could decline to test the Jan support. A break below the support would confirm H&S top and a decline to the 18 level would then be possible.

# GOLD SHARES

**AGNICO-EAGLE MINES (AEM) 9/6/11 CLOSE= 70.51 US\$**

**Agnico-Eagle Mines (NYSE: AEM) Also traded in TSX:AEM**

Open trades:	Positions	Entry Level: 68 (Aug-29-11)
	Stop:	2 dc below 64 (adjusted).
	Profit targets:	75 (adjusted) &/or 85.
New Recom:	<b>Sell half at our next profit target.</b> Buy more after a dip that holds above the 64 level after a 2dc.	
Comment:	Has been rising strongly during the month of Aug. It's likely we'll see AEM consolidate a bit before it continues to rise. Approached our first profit target and was hit with heavy profit taking. Although indicators are showing AEM at overbought levels, it'll likely hold above its 75 day MA (63.50 level) during weakness. Keep your positions as AEM is poised to rise further. We recomend taking profits along the way.	

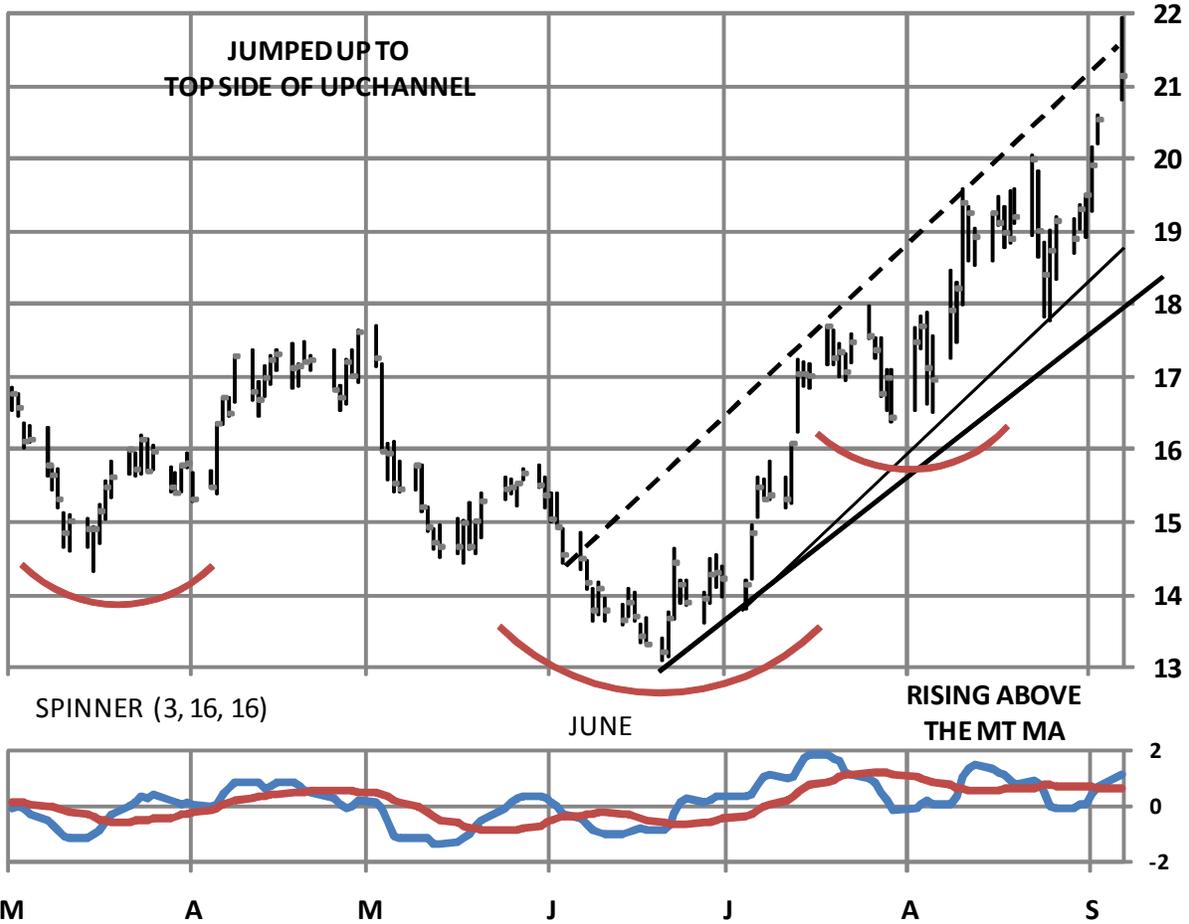

**AURICO GOLD INC. (AUQ) 9/6/11 CLOSE= 12.43 US\$**

**Aurico Gold (NYSE: AUQ) Also traded in TSX:AUQ**

Open Positions	Long:	Entry Level: 12.25 (Aug-12-11) and at 11.65 (Aug-31-11).
	Stops:	ST: 2dc below 11.50 (adjusted) & MT: 1dc at or below 10
	Profit Targets	14 &/or 15.
New Recom:	Keep your positions. <b>Sell at first target level.</b>	
Comment:	<p>AUQ bottomed above the 11 level and has resumed its rise, breaking above its 25 day MA today (intraday). The 75 day MA is solid support, currently at the 11.50 level. Has risen for 5 days in a row on above average volume, telling us that there is a strong tendency to buy AUQ. Spinner has bottomed at oversold levels and has started to rise. All great signs of strength telling us that a rise to test the old highs is likely. On the downside, watch the 75 day MAs as it has been a key trend for AUQ. If AUQ breaks below the 75 day MA (11.50) after a 2dc, a decline to the bottom side of the Jan upchannel near 10 would be likely.</p>	

**ELDORADO GOLD (ELD.TO) 9/6/11 CLOSE= 21.15 CAD\$**

**Eldorado Gold (TSX:ELD) Also traded in NYSE:EGO, ASX:EAU**

Open trades:	Long at:	Entry Level: 19.25 (Aug-31-11) <b>Sold some at 21.25 for a 10% gain in just a week! :)</b>
	Profit Target	21.25 (reached!) &/or 23.50
	Stop:	ST 2dc below 19; MT: 2dc below 18.
New Recom:	Keep your positions. Look to sell more when our next profit target is reached.	
Comment:	Jumped up to the H&S bottom target of 21.25, our first profit target. Continues to look very strong as ELD.TO broke above the top side of the adjusted June upchannel. Volume has been strong on the rises and weak on the declines as Spinner breaks above its M/T MA with room to rise further. All good signs of strength. On the downside, keep a close eye on the June uptrend near the 18 level. A break below it would signal a reversal in trend.	

**GOLDCORP (G-TO) 9/6/11 CLOSE= 54.11 CAD\$**

**GoldCorp (TSX: G) Also traded in NYSE: GG**

Open trades:	Long at:	Entry Level: 46.85 (Aug-3-11) and 47.50 (Aug-10-11). <b>Sold all at 54 or higher for a 15% gain for the move!</b>
--------------	----------	--

Comment:	Rose sharply to our target, breaking above the top side of the 6+ mo sideways band. Its currently holding near the top side of both the Jan and Jul upchannels. Spinner rising, breaking above its M/T MA showing it could still rise a bit more. Other indicators telling us that G.TO is near overbought levels and its a good time to take profits. If you did not sell when the 54 mark was reached, sell at 54 or higher. It's likely for G.TO to resist below the top side of the Jan upchannel at the 56 level. It's been a great month for G.TO. We'll be looking to buy again on weakness.
----------	---

**(NGD) NEW GOLD 9/6/11 CLOSE= 13.52 US\$**

**New Gold Inc. (NYSE/AMEX:NGD) Also traded in TSX:NGD**

Open trades:	Long at:	Entry Level: 11.40 (Aug-12-11) <b>Sold the rest of your position at 13.65 for a 20% profit! :)</b>
Comment:	Continues to resist below the 14 level despite leap in gold shares this past week. Rising wedge with downside target of 11 still valid. Must see NGD break below 13 after a 2dc to confirm wedge formation. Spinner topped at overbought and has started to decline, breaking below its M/T MA. All signs of weakness. Has also been great this month. We'll wait to buy again on weakness.	

**PAN AMERICAN SILVER (PAA.TO) 9/6/11 CLOSE= 33.18 CAD\$**

**Pan American Silver (TSX:PAAS) Also traded in NASDAQ:PAAS**

Open trades:	Long at:	Entry Level: 31.75 (July-15-11).
	Stop:	ST 2dc below 32; MT: 2dc below 27.
	Profit Target	34 (almost reached!) &/or 37
New Recom:	Keep your position. Sell half when next profit target is reached.	
Comment:	Broke above the July resistance level, rising near the top side of the Aug upchannel near the 34 level. Volume has been stronger on the rises than on the declines, telling us that there is some upward pressure. Spinner continues to look strong above its M/T MA, but other indicators showing PAA.TO at overbought levels, telling us that the upward potential may be limited for the move. On the downside, the Aug uptrend line is an important support, a 2dc break below 32 would show weakness.	

**MV RARE EARTH (REMX) 9/6/11 CLOSE= 20.38 US\$**

**Mkt Vets Rare Earth (NYSE:REMX)**

Open trades:	Long at:	Entry level: Gamblers bought at 20.25 (Aug-10-11).
	Stop:	1dc at or below 20 (adjusted).
	Profit Target	22 (adjusted) &/or 25.
New Recom:	Keep your positions. Sell half once next profit target is reached.	
Comment:	Resisting below the adjusted July downchannel despite strength shown by Spinner action. This tells there is more downside potential for REMX. Must see REMX brake above the 22 level after a 2dc to see renewed signs of strength.	

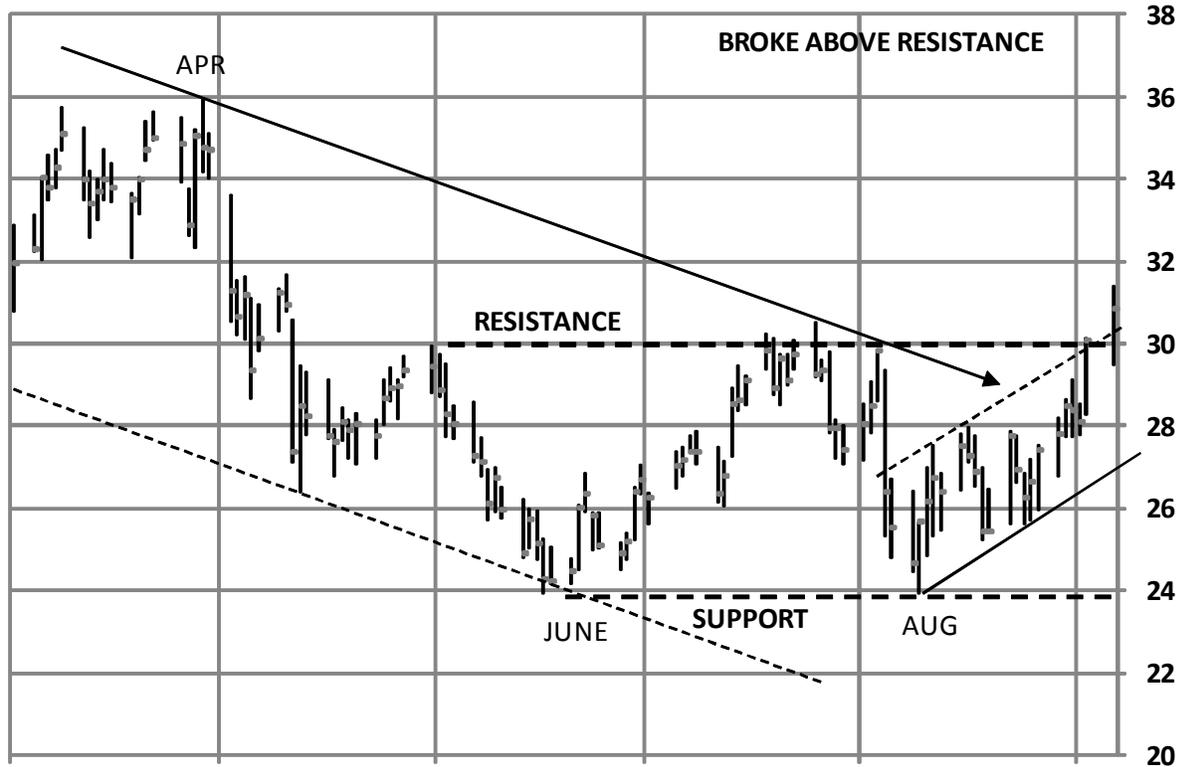

**SILVER WHEATON CORP (SLW) 9/6/11 CLOSE= 40.09 US\$**

**Silver Wheaton (NYSE: SLW) Also traded in TSX:SLW**

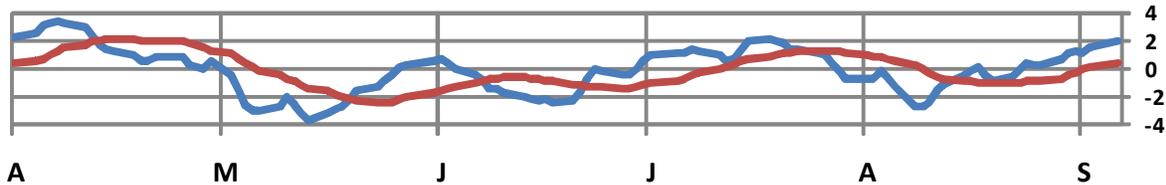

Open trades:	Long at:	Entry Level: 39.50 (Aug-30-11), 39.50 (Sept-1-11).
	Stop:	S/T & M/T: 2dc below 35.50.
	Profit targets:	45 (adjusted) & 48
New Recom:	Keep your positions. Look to sell half or all when next profit target is reached.	
Comment:	Broke above the 40 level resistance to a 4+ Mo high for the move. Aug uptrend line gains momentum as SLW continues to gain ground. Spinner moving sideways, but still above its M/T MA with room to rise further. If SLW can hold above the 39 level, it could then rise to test the Apr highs near the 48 level. On the other hand, a break below the Aug uptrend line after a 2dc below 39 would show weakness and a decline to the Jun uptrend line would then be likely.	

**SILVER STANDARD (SSRI) 9/6/11 CLOSE= 30.87 US\$**

SPINNER (3, 16,16 )

**BULLISH ABOVE  
MTMA**

**Silver Standard Resources Inc. (NASDAQ:SSRI) Also traded in TSX:SS0**

	Long at:	Entry Level: 27.50 (July-7-11) and 29.50 (July 18-11). <b>Sold half at 31 for a 7% gain for the move. :)</b>
Open trades:	Stop	M/T: 2dc below 24.
	Profit targets:	31 (reached!) &/or 34
New Recom:	Sell the rest when the 33 and 34 level are reached.	
Comment:	SSRI broke above both its resistance at the 30 level and above the top side of the Aug upchannel into new 4+ Mo highs. Past two days has risen on higher than average volume, showing important signs of strength. Spinner clearly above its M/T MA nearing an overbought levels but looking strong. On the downside, if SSRI is unable to remain above the 30 level, it'll likely decline to its first support at the bottom side of the Aug upchannel near the 27 level.	

**US GOLD CORP (UXG) 9/6/11 CLOSE= 6.15 US\$**

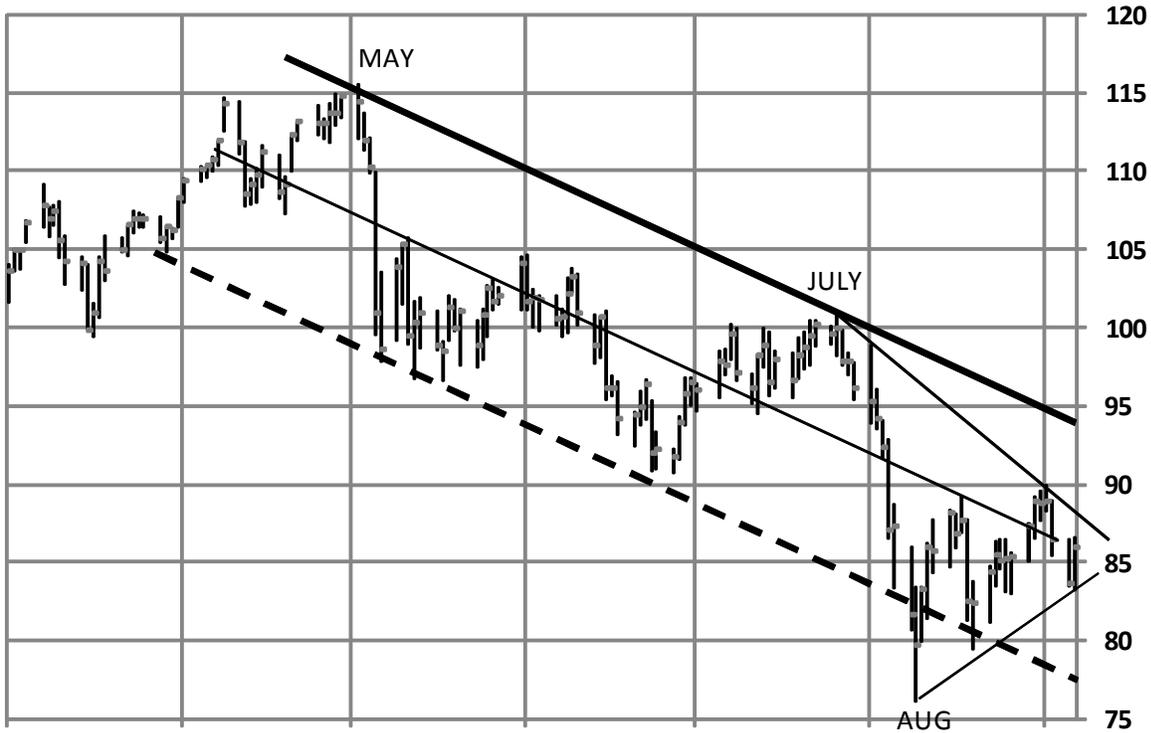

**US Gold Corp (NYSE: UXG) Also traded in TSX:UXG**

Open trades:	Long at	Entry Level: Gamblers bought at 6.05 (Aug-10-11). All others waiting to buy.
	Stop:	ST & MT: 2dc below 5.50
	Profit Target	6.85 (adjusted) &/or 7.50 (adjusted)
New Recom:	Keep your positions. Look to sell half or all when next profit target is reached.	
Comment:	UXG continues to hold firmly above the 6 level but unable to break clearly above its 75 day MA which has been strong resistance for the move, currently at 6.25. A break above this level after a 2dc would show renewed strength and a rally to its next resistance below 8 level would then be possible. Spinner continues to move above its M/T MA with room to rise. Volume has been stronger on the rises than on the declines. On the downside, if UXG is unable to break above this resistance, it's likely to continue declining to its support at the 5.50 level.	

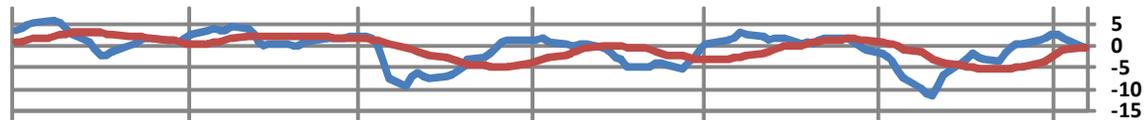

# FUTURES

**LIGHT CRUDE OIL OCT 2011 (CLV11) 9/6/11 CLOSE= 86.02**

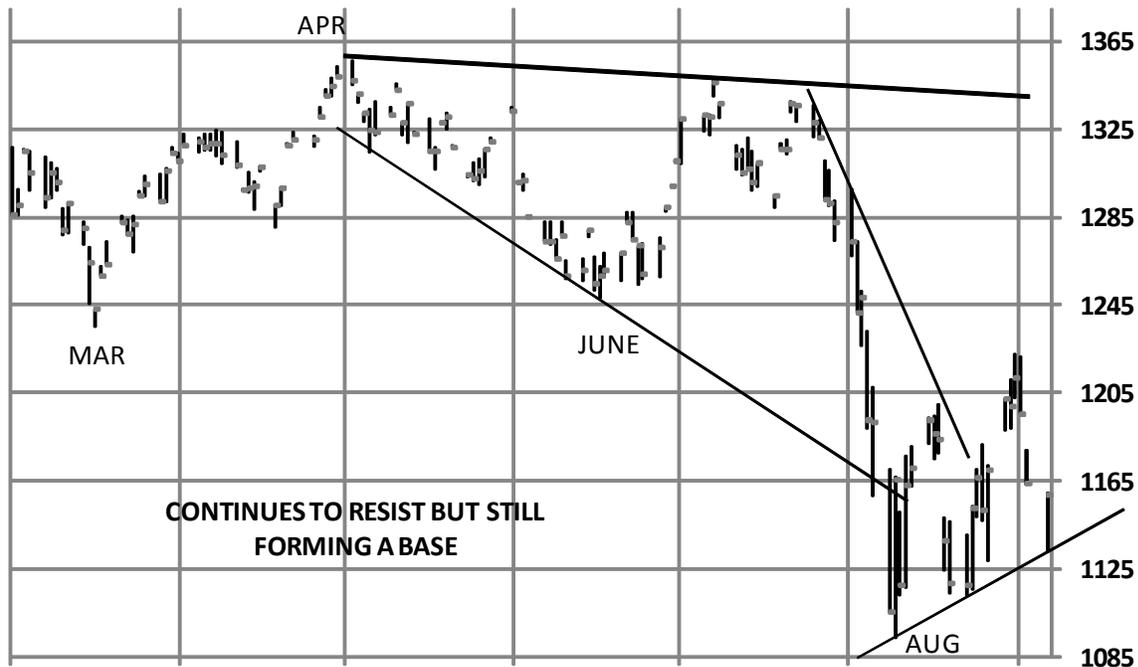

SPINNER (3, 16, 16)

**BULLISH IF STAYS ABOVE M/T MA**

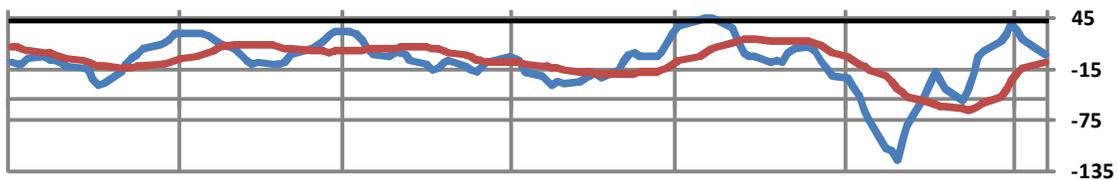

Open Positions	Long at:	Entry Level: 81 (Aug-10-11).
	Stops	2dc below 80.
	Profit Targets	88 (adjusted) &/or 92
New Recom:	Sell half when next profit target is reached and all at the 92 level. All buy after a 2dc above 93 (adjusted).	
Comment:	Crude almost reached our original profit target at the 90 level, but resisted below it which is now the July downtrend. If crude breaks below its Aug uptrend line, it could decline to the bottom side of the May downchannel. Spinner is forming a top at current levels and is looking to break below its MT MA. All signs of weakness. On the upside, if crude breaks above 90 and then above the May downtrend line resistance after a 2dc above 93, we'll see renewed strength.	

## S&P 500 INDEX DEC 2011 (SPZ11) 9/6/11 CLOSE= 1158.8

SPINNER (3, 16, 16)

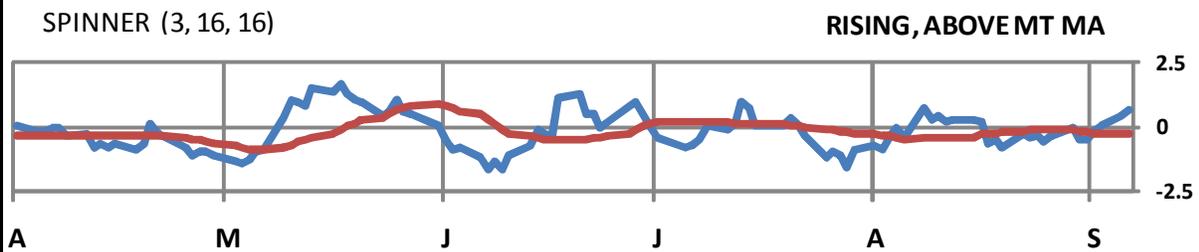

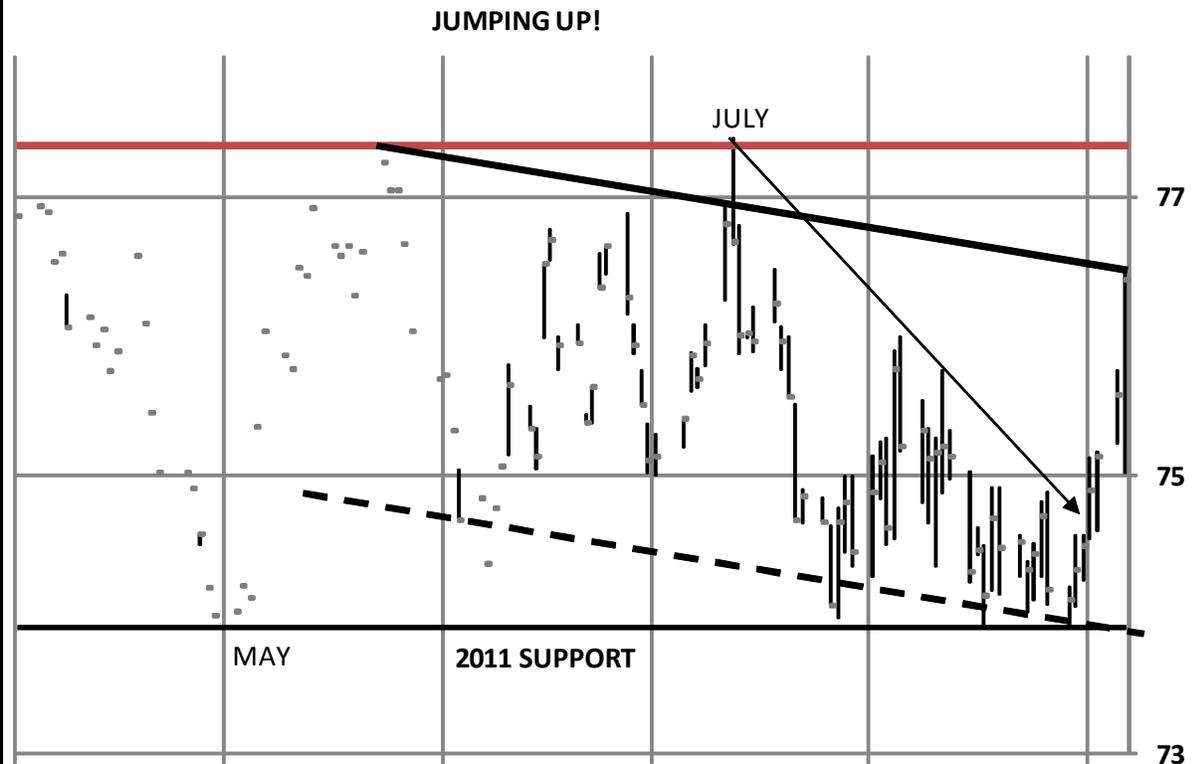

**TOPPING AT OVERBOUGHT**

M                      A                      M                      J                      J                      A                      S

Open trades:	Long at:	Entry Level: 1210 (Aug-11-11)
	Stop at:	S/T & M/T: 2dc below 1100
	Profit targets:	1280 &/or 1325
New Recom:	Keep your positions, sell at profit targets.	
Comment:	<p>S&amp;P sold off on the weak US Jobs report. And today it continued to fall with the global markets after Labor Day. But it continues to form an Aug uptrend, and the downside wedge target at the 1280 level is still valid. We'll likely continue to see volatility in the S&amp;P as it consolidates. Spinner has topped at overbought, telling us it's likely we'll see S&amp;P remain weak. Must see it break and stay above the 1200 level to see renewed strength. Also, keep a close eye on the 1100 support level. If during weakness, S&amp;P continues to hold above it, would be a good buying area. On the downside, if S&amp;P breaks below its support after a 2dc, sell your current position and stay out until the stock market stabilizes.</p>	

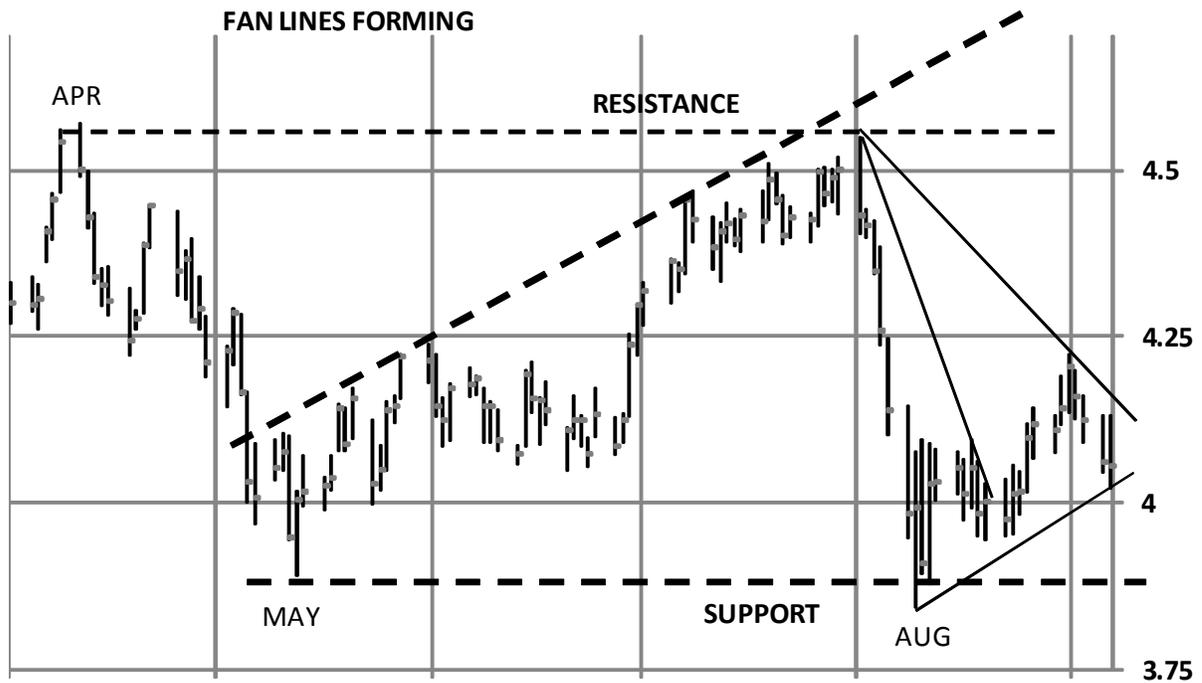

**U.S. DOLLAR INDEX DEC 2011 (DXZ11) 9/6/11 CLOSE= 76.412**

**New Recom:** Gamblers buy some at mkt! Profit targets 77.50 & 80. Place stops after a 2dc below 73.50. All others buy on a 2dc above 77.50.

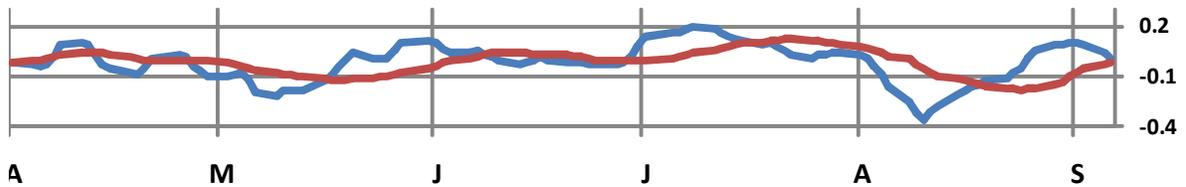

**Comment:** Breakout! The dollar broke above its July downtrend. Downside wedge with upside target of 77 underway! Spinner started to rise, breaking above its MT MA, with room to rise further. If the dollar breaks above both the July high and top side of the 5 mo sideways band after a 2dc above 77.50, we'll see renewed strength. On the downside, despite recent strength, continues to move within the May downchannel. If dollar is unable to break above the 77.50 level after a 2dc, it'll likely decline again to possibly the bottom side of the sideways band.

**COPPER DEC 2011 (HGZ11) 9/6/11 CLOSE= 4.056**

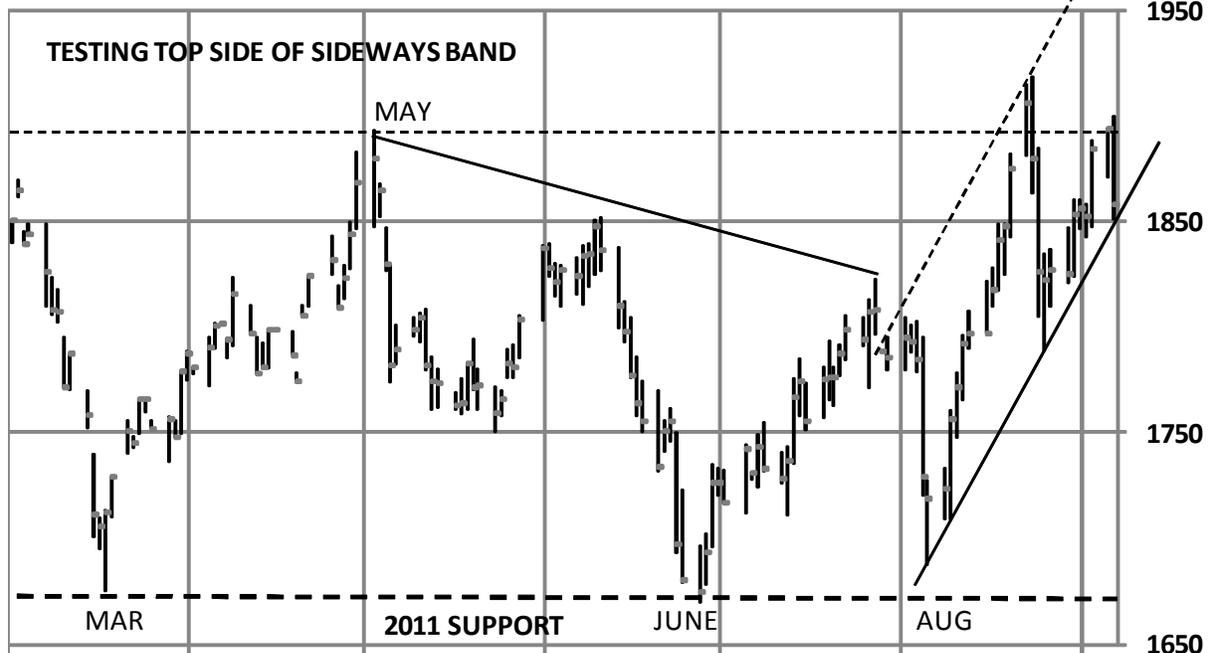

SPINNER (3, 16, 16)

STILL STRONG ABOVE M/T MA

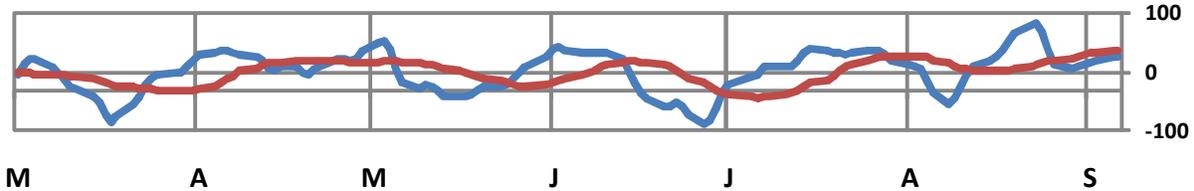

Open Positions	Long	Entry Level: 4.00 (Aug-16-11)
	Stop	S/T & M/T: 2dc below 3.88
	Profit Target:	4.30 &/or 4.50
New Recom:	Keep positions. Look to sell half once next profit target is reached.	
Comment:	Copper failed to stay above its 75 day MA, but it's still looking strong above 4 level. Aug uptrend line continues to gain momentum as copper holds above it. Fanlines forming. Spinner continues to look strong above MT MA with room to rise further. All important signs of strength for the move. Watch the 75 day MA at the 4.18 level as a 2dc above it would show great strength. On the downside, if copper breaks below the 4 level after a 2dc, we'd see a first sign of weakness and a decline to test the May-Aug support near 3.90 would then be likely.	

**PLATINUM OCT 2011 (PLU11) 9/6/11 CLOSE= 1858.2**

SPINNER (3, 16, 16)

NEUTRAL

Open Positions	Positions	Entry Level: 1850 (Aug-30-11)
	Stop	2dc below 1800.
	Profit Targets:	2000 & 2200
New Recom:	Keep your positions.	
Comment:	Continues to rise within its Aug upchannel. Looking very bullish above its 25 day MA at the 1820 level. If platinum breaks above the May resistance after a 2dc, will see strength that could take it to our next profit targets that coincide with the top side of the Aug upchannel. Spinner continues to rise and looking to break above its M/T MA. A break above it would reconfirm strength in platinum for the move. On the downside, a break below the 25 day MA after a 2dc below 1820 would show signs of weakness and a possible decline to the 2011 support level.	

Quoting *GCRU* is permitted provided *GCRU* name, website address & subscription price are given.

All charts in *GCRU* are daily prices.

Fax subscribers please note this week's password to access *Aden Gold Share Advance/Decline Line* chart daily via our website is: (*takingprofits*).

Subscribers can obtain free online chart updates for all gold shares in *GCRU* via: [www.bigcharts.com](http://www.bigcharts.com). To view Canadian stks please use CA as prefix (ie, to view Agnico Eagle (Toronto) you must use CA:AEM).

**Note:** U should NOT feel our recommended prices are set in concrete. If mkt's suddenly feel hot or cold to U, or dramatic news occurs, U can buy or sell, or stop at slightly higher or slightly lower prices. It also hinges on your experience level. Some people can use our prices as guides & know when they can take bigger risks.

**Spinner:** Spinner is an in-house momentum indicator (not always shown on charts). Momentum indicators use the rate of change in price to determine predominant energy flows. Spinner trading signals are generated when the faster timing line crosses above or below the slower confirming line. Upside crosses in the lower range of positive territory offer the most reliable signals for longs; downside crosses in the top range of negative territory for shorts. Avoid trading against the timing line, ie, buying/selling if the timing line is in corrective mode (against direction of trade) unless the confirming line is positioning for a new 'confirming cycle'. It's important to always be aware of location, direction & cycling phase of the confirming line. Spinner signals are more effective in trending mkt's than in trading ranges where indicators such as Stochastics & Williams %R should be used.

NOTE: payments for *GCRU* services should be made payable to **MAP CUSTOMER SERVICE**. *Gold (& mkt's) Charts R Us* is published weekly. You may sign up for 3-mos at \$300 (€251), 6-mos at \$585 (€489), 9-mos at \$855 (€715) or 12-mos \$1,110 (€928).
