ELECTION UNCERTAINTY EASED

It's been a wild 24 hour.

The Dow Industrial Average Futures declined about 800 points overnight when the media suggested a Trump victory. Gold jumped up \$60. The Mexican Peso fell to an 8 year low.

The Trump card has been the key uncertainty in the markets.

But with a smooth Trump win, uncertainty took a back seat and risk-on sentiment grew. Fear turned to greed and the Industrial Average ended up over 250, a few points shy of its record highs. Gold gave back its luscious gains and ended the day unchanged.

Interestingly, the Transportation Average, a true sleeper for the past two years, broke above a key triple top resistance showing upside potential, as you'll see inside this edition. Both averages are showing room for more upside ST.

Interestingly, the Chinese government continued to dump U.S. Treasuries and together with inflation expectations, it helped cause the 10 year yield to spike higher in the biggest jump in yields in 3 years. The dollar got a boost as well.

Our **Chart of the Week** shows this clearly. You can see the 10-year yield hit a 10-month high, rising clearly above its 65-week MA while the dollar index rose to the October high area.

You can see how closely the dollar index and the yield have been essentially moving together this past year. Both peaked last

November, and they could well be headed to test that level.

The dollar strength yesterday wasn't as convincing as the rise in the yield. It failed to reach a new high for the move, but it still could ST.

To read more about China dumping of U.S. Treasuries, read the article below from [zerohedge.com](http://www.zerohedge.com):

<http://www.zerohedge.com/news/2016-11-09/china-celebrates-trump-presidency-suddenly-dumping-treasuries>

Bonds dropped. Could gold follow? Last week we showed you how gold and bonds have been moving together as safe havens. And clearly safe havens were out of favor following the election results.

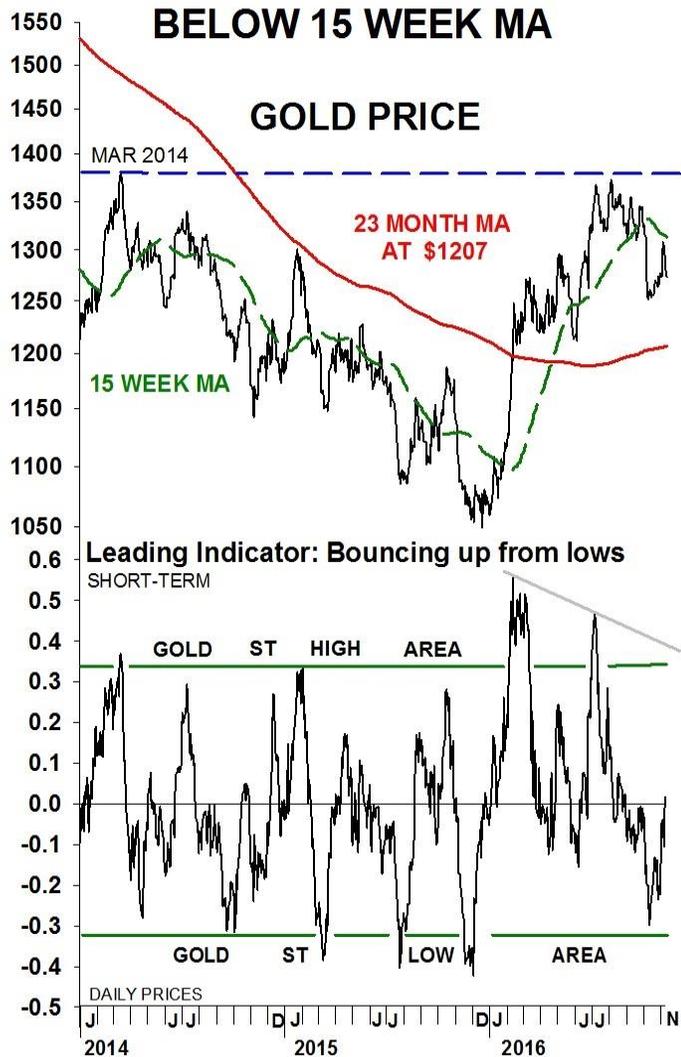

Clearly bonds got an extra push down with the massive selling while gold remained well above its October 7 lows at \$1250. This change could possibly be the start of a change in this relationship.

Whether gold will follow bonds lower in a continued 'D' decline or if it'll hold at its \$1250 ST support is yet to be seen. One of our ST indicators on the chart is showing gold already at or near a bottom with good ST upside potential.

Note gold is still below its key 15-week MA now at \$1314. And it will remain vulnerable in the D decline until it rises and stays above this MA. Per the indicator, as shown in the **Chart Below**, it could happen soon as it bounces from a low area. But we can't

dismiss the downside just yet. If \$1250 is broken, we could see the 23-month MA tested.

STRONG, YET STILL VULNERABLE BELOW 15 WEEK MA

But what could the divide in gold and bonds be telling us? ... Could it be that deflationary pressures are easing and inflation has turned the corner?

Inflation has picked up. PCE, the Fed's preferred gauge rose to a 2-year high during September. The CPI also has picked up rising a 1.5% during the month of Sept 2016 (YoY). Also showing the highest level since 2014. Recently, the Fed's Fisher also

mentioned inflation and employment are nearing the Fed's target.

This in tandem with copper bursting up to a 13+ month high yesterday together with the sharp decline in bonds, shows easing deflationary pressures and a pick-up in inflation.

The action above also is showing a clearer path towards tightening of monetary policy.

Although a hike in interest rates could erode allure for stocks and gold, we need to focus on real interest rates. That is, the rate of interest less inflation. If real rates remain negative, particularly if inflation rises faster than rates, this situation will remain supportive of higher stocks and gold.

Keep in mind, a change in fiscal policy in the U.S., as Mr. Trump has announced, could set the stage for the velocity of money to pick up and therefore fuel inflation. Something that could continue pushing stocks and precious metals up higher during 2017.

We picked up some more gold this week near \$1280. We'll continue to hold our positions if gold stays above the bull market support above \$1200.

Our gold shares continue to hold near the recent highs. HUI is holding above its 5wk MA, which is a bullish ST sign. We picked up some more positions in NUGT and GDXJ this past week.

Considering the overall look of the ST situation, we prefer to sell our new NUGT position, breaking even, and wait to buy at a

better price. NUGT is speculation and we're not out of the woods just yet.

Interestingly crude remains weak. It broke below its 2016 uptrend opening a path to lower levels. If demand/supply mechanics in crude remain distorted, we could continue seeing weaker oil prices.

However, if stocks, particularly the Transportation stocks continue to perform, it might just be the sector to consider as it has lots of catching up to do, and weaker oil should allow for better profits.

Considering the surge in the Transportation Average, we're recommending a trade for this sector inside this edition.

Our strategy this week is to remain watchful. Keep a close eye on the 10-year yield and

the U.S. dollar index. The latter is getting closer to its 2016 highs. Also, keep a close eye on gold's ST support at \$1250, it's an important one. Keep your triggers ready and sell positions if profit targets are reached.

Good luck and good trading,

Omar Ayales
Chief **Trading** Strategist

MARKET LEADERS

GOLD DECEMBER 2016 (GCZ16) 11/09/2016 CLOSE = 1273.5

Long	1260 (Mar-4 & 7 - 16) (GLD: 121), 1208 (May-31-16) (GLD: 115.50). Sold half at 1335 (GLD: 126.85) for an average 8% gain. 1306 (Sept-1-16) (GLD: 124), 1285 (Oct-4-16) (GLD: 122.25), 1280 (Nov-7-16) (GLD: 121.90).
Stop	2dc below 1200 (GLD: 115.80)
Profit Targets	1400 & 1500 (GLD: 133 & 143).
New Long Recom	Keep positions.

Gold spiked up an impressive \$62 dollars overnight as a Trump victory in the U.S. elections was becoming evident. Uncertainty due to the U.S. election peaked. However, concerns eased with Trump's victory speech and by the end of the trading day today, gold gave back its overnight gains. Plus, keep in mind gold remains within its 'D' decline as long as gold holds below 1314 (75 day MA). On the upside, if gold holds above the May uptrend (1250) and breaks above 1320, gold's cyclical bull market will prove to be very strong and a break above gold's key resistance at 1380 would then be likely. However, if gold fails to stay above 1250, it still has its bull market support at 1200. A break below this level would be needed to see gold's trend revert to bearish. Keep your positions.

SILVER DECEMBER 2016 (SIZ16) 11/09/2016 CLOSE= 18.378

Call Spread:	Dec 2016 bull call spread 24.50/27 at \$500 (Aug-12-16).
Long at:	20.15 (Jul-12-16) (SLV: 19.10), 19.75 (Aug-8-16) (SLV: 18.90), 18.50 (Aug-29-16) (SLV: 17.60), 18.70 (Sept-1-16) (SLV: 17.75), 18 (Oct-4-16) (SLV: 16.95), 17.65 (Oct-5-16) (SLV: 16.85), 17.40 (Oct-12-16) (SLV: 16.75).
Stop	NO STOP FOR NOW.
Profit Target	25 & 28 (SLV: 23.50 & 26)
New Recom:	Keep your positions. We recommend rolling over your bull call spread to Mar 2017.

Silver continued to rise this week thereby showing it remains on an upward path. It's now approaching a key resistance level at the Jul downtrend near 19.50. Silver must break above this level to confirm strength that could push silver to its next key resistance at the Jul highs near 21.25. However, notice Spinner topping at a ST high area. This tells us upside potential remains limited to possibly the 19.50 level ST. On the downside, keep a close eye on the 2016 uptrend near 17.50. It's a key support. A break below this level could push silver to its bull market support level near 16.35. Keep your positions.

U.S. DOLLAR INDEX DECEMBER 2016 (DXZ16) 11/09/2016

CLOSE= 98.529

The U.S. dollar index halted its decline and spiked up as the 10 year yield shot above 2%. The dollar remains at the top side of its almost two year sideways band near 99. Notice Spinner holding at an uptrend of its own, showing momentum remains on the rise. Keep in mind, the dollar index's 2016 highs near 100 remain its key resistance level. If the dollar fails to rise above this level, we could see it decline to test its first support at the May uptrend near 95.50. Interestingly, dollar strength hasn't affected the gold universe yet. This tells us, dollar strength is likely due to weakness in the dollar index's counter-part currencies (euro, Canadian dollar, Japanese yen, pound sterling, Swiss franc and Swedish krona) which shows its vulnerability. We recommend keeping cash in U.S. dollars. It remains among the strongest currencies.

LIGHT CRUDE OIL DECEMBER 2016 (CLZ16) 11/09/2016 CLOSE= 45.27

Recom: **Stay out for now.**

Crude continued to decline this past week as it breached the 2016 uptrend near 46. Spinner continued to fall further reaching an extreme oversold level. Speculation that supply will continue to outpace demand as producers fail to reach an agreement to limit production will continue to weigh heavily on crude. However, the chart above is showing we might see a technical rebound, to possibly crude's key resistance level near 52. Keep in mind; OPEC and Russia have another meeting on the 25th of November in an attempt to reach an agreement to somehow constraint production. However, the challenges to reach such an agreement in the recent past remain and may continue putting a cap on crude's upside potential. Although the upside looks inviting for a trade, uncertainty in regards to global production remains high making the trade riskier than normal. Those of you who would be inclined to speculate with crude may want to buy at mkt placing a stop loss at 2dc below 40 with profit target at 51.

CBOE Interest Rate 10 Year T No (^TNX) 11/09/2016 CLOSE= 2.07

CBOE Interest Rate 10 Year T No (^TNX) - Chicago options

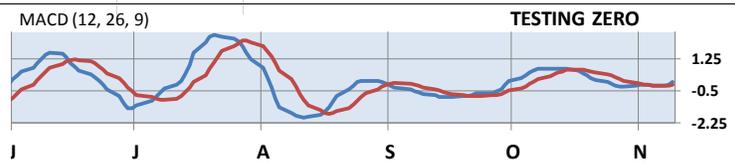

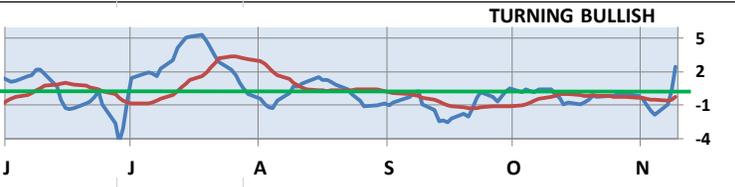

The 10YY broke above the top side of its Jul upchannel and the Nov downtrend showing impressive strength, reaching a 10 mo high! The rise invalidated the bearish rising wedge and it's now showing potential for a major trend reversal. By staying above the Jul uptrend near 1.65%, the 10YY will remain firm with upside potential. Strength in the 10YY is fueling the U.S. dollar index and could add pressure to precious metals and stocks.

COPPER DECEMBER 2016 (HGZ16) 11/09/2016 CLOSE= 2.4595

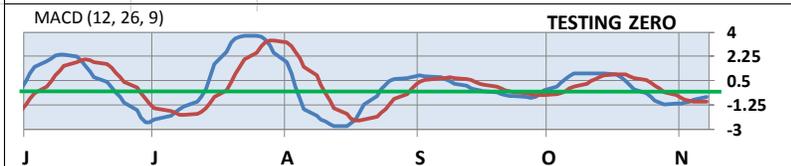

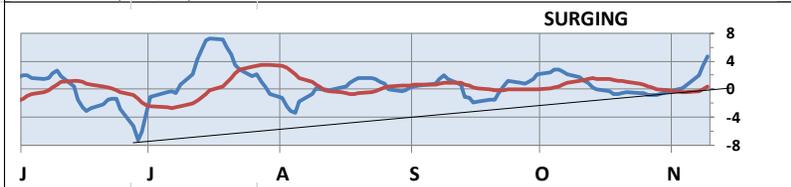

Copper broke above its Oct 2015 downtrend and resistance like a hot knife through butter. It continued its rise reaching a 13+mo high! Signs of stronger demand and a pick-up in inflation continue to fuel copper's rise. This, together with a rise in the 10 year yield and a collapse in bonds also tells us deflationary forces are backing off. Copper could decline to 2.27 to ease this excess and still look good.

**SPDR DOW JONES INDUSTRIAL (DIA) 11/09/2016
CLOSE= 185.94**

**Shares Transportation Average (^IYT) 11/09/2016
CLOSE= 151.03**

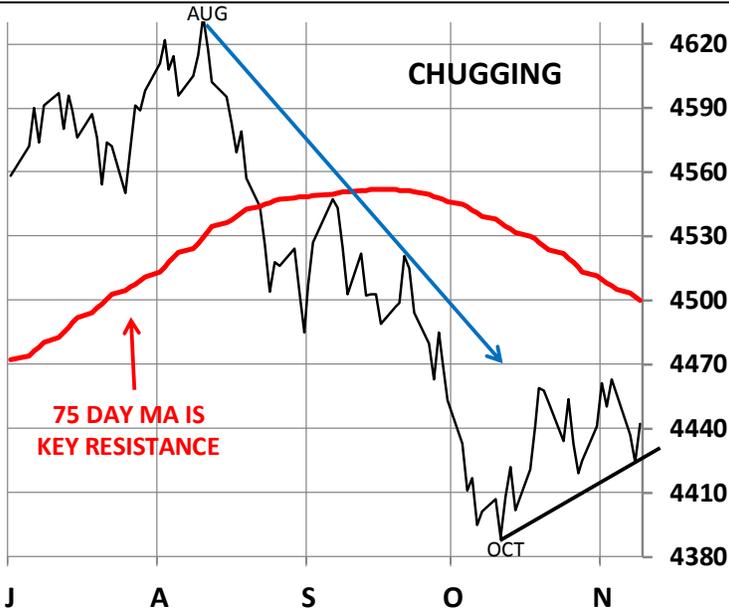

New Recom

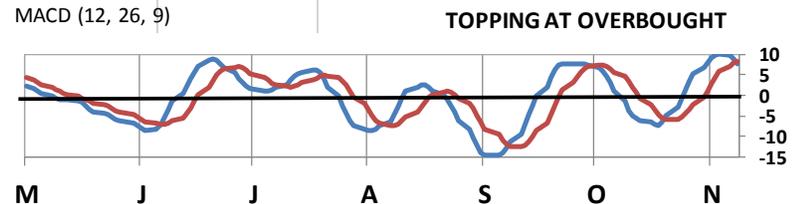

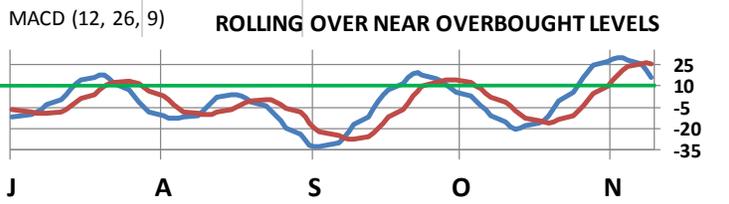

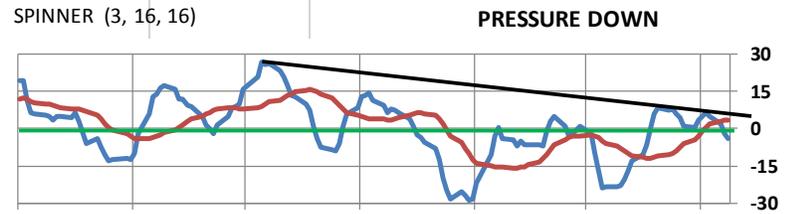

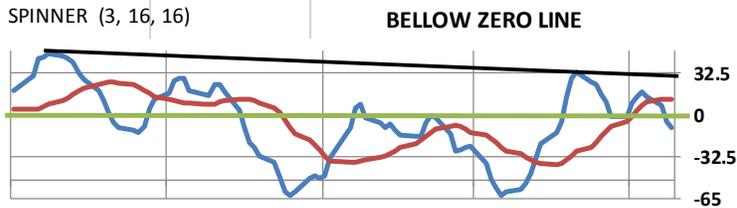

Buy some IYT on a pull back to 147. Place stops at 2dc below 143. Profit target at 165.

In an impressive turnaround of events, the Averages surged showing impressive strength. The Industrials rose over 250 points and closed just shy of a new all-time high while the Transports broke above a triple top resistance and bullish ascending triangle. Although it's too early to call a bull Dow Theory confirmation, it's a clear sign of strength that opens the door to more upside. That is, the Industrials must rise above 18,637 and the Transports above 9,200. However, today's surging strength in the Transports tells us we could see it test the all-time highs near 9,200 as it catches up to the Industrials, NASDAQ and others. On the downside, the Jun uptrend remains key near 143.

**ADEN GOLD STOCKS ADV/DECLINE 11/09/2016
CLOSE = 4442**

HUI GOLD BUGS INDEX (HUI) 11/09/2016 CLOSE= 211.38

HUI spiked up after testing the 209 level where its Oct uptrend and its 25 day MA converge. The 25 day MA has been a ST key level for HUI. When HUI has risen and stayed above it, it's shown ST strength. And when HUI has broken and stayed below it, it's shown weakness. Our in house A/D Line is also redrawing its uptrend after dipping below it. However, as long as both the A/D Line and HUI hang on to their Oct uptrends, we could see strength that could fuel gold shares to their Aug highs. On the downside, notice our indicators showing weakness. Spinners are turning bearish by breaking below zero while MACDs are topping at an extreme overbought level. This tells us upside could be limited ST. However, gold shares remain near the lows where they have solid support and recommend holding on to your positions for now.

STOCKS

Agnico Eagle Mines Limited (AEM) 11/09/2016 CLOSE= 50.54

Agnico Eagle Mines Limited (AEM) - Nyse

Long at:	52 (Jun-27-16), 52 (Jun-28-16) Sold half at 59.50 for a 14.5% gain! 52 (Aug-24-16), 51 (Sept-1-16), 44.90 (Oct-7-16), 44.90 (Oct-10-16).
Stop:	2dc below 44.
Profit Target	54, 60 & 70
New Recom:	Keep your position. Sell some at first profit target.

AEM continues to chug upward as it holds above its Oct uptrend near 49. However, AEM must break above the Aug downtrend on a 2dc above 54.50 to show strength that could fuel a continued rise to the Aug highs near 60. Spinner on the decline from an overbought level, approaching zero. This tells us downside pressure near AEM's resistance is strong, but it remains positioned for more upside as long as AEM holds above 49, the Oct uptrend. Conversely, a break below 49 on a 2dc would push AEM to possibly the May uptrend near 44.25. Keep your positions for now.

ETFS Physical Platinum (PPLT) 11/09/2016 CLOSE= 95.99

ETFS Physical Platinum (PPLT)

Long at: 104 (Aug-24-16), 100.50 (Sept-1-16)., 98.50 (Sept-27-16), 90.75 (Oct-19-16).

Stop: NO STOP FOR NOW.

Profit Target: 110 & 135

New Recom: **Keep your position.**

PPLT continued to rise with strength and it's looking good by staying above the Oct uptrend near 92. Spinner above zero and its MT MA showing momentum remains on the rise. We recommend keeping your positions for now as more upside is likely. On the downside, a break below 92 on a 2dc would show renewed weakness.

Silver Wheaton Corp. (SLW) 11/09/2016 CLOSE= 24.08

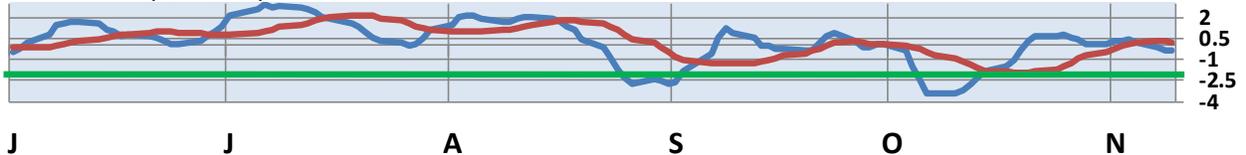

CHUGGING UPWARD...

**JUN UPTREND IS KEY ST
SUPPORT**

SPINNER (3, 16, 16)

NEUTRAL TO BULLISH

Silver Wheaton Corp. (SLW)

Long at:	27 (Aug-24-16), 25.25 (Sept-1-16), 22.20 (Oct-7-16), 22.85 (Oct-10-16), 24 (Oct-19-16).
Stop:	2dc below 20.
Profit Target	28, 31 & 40
New Recom:	Keep your positions. Sell some at first profit target.

SLW continues to chug upward as it holds above its bullish Jun uptrend. However, SLW must break above the Aug downtrend on a 2dc above 27 to show renewed strength. If it fails to rise above this level, it'll expose weakness and could then test the Jun uptrend and support. A break below this level could push SLW initially to SLW's next real support near 20. We recommend giving SLW some wiggle room. Hold on to your positions as long as SLW's support at 20 holds.

DIREXION GOLD MINERS BULL 3X ETF (NUGT) 11/09/2016

CLOSE= 14.05

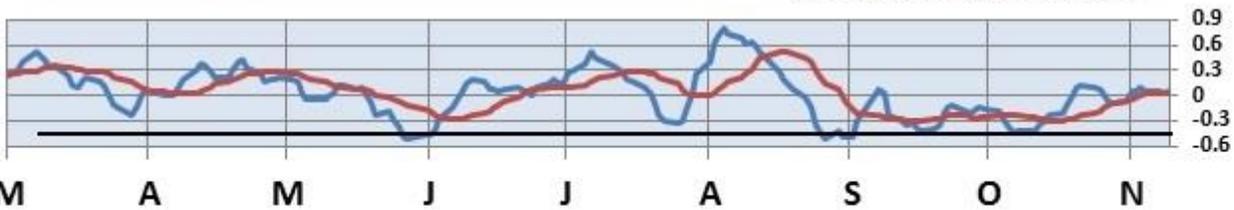

Direxion Daily Gold Miners Bull 3X ETF (NUGT) -NYSEArca

Long at:	14.75 (Nov-3-16), 13 (Nov-7-16).
Stop:	2dc below 11.
Profit Target	22 & 30.
Recom:	It's best to sell at mkt.

Remember NUGT will triple the action on the HUI to the upside and downside. This trade is highly speculative. Caution is warranted. NUGT continues to uptrend within its modest uptrend since Oct. Although downside pressure remains strong, NUGT will continue to show upside potential by staying above its Oct low and key support level. It's best to sell if you bought because Spinner is poised to decline signaling a loss in momentum. We'll buy again at a lower price.

New Gold, Inc. (NGD) 11/09/2016 CLOSE= 4.29 US\$

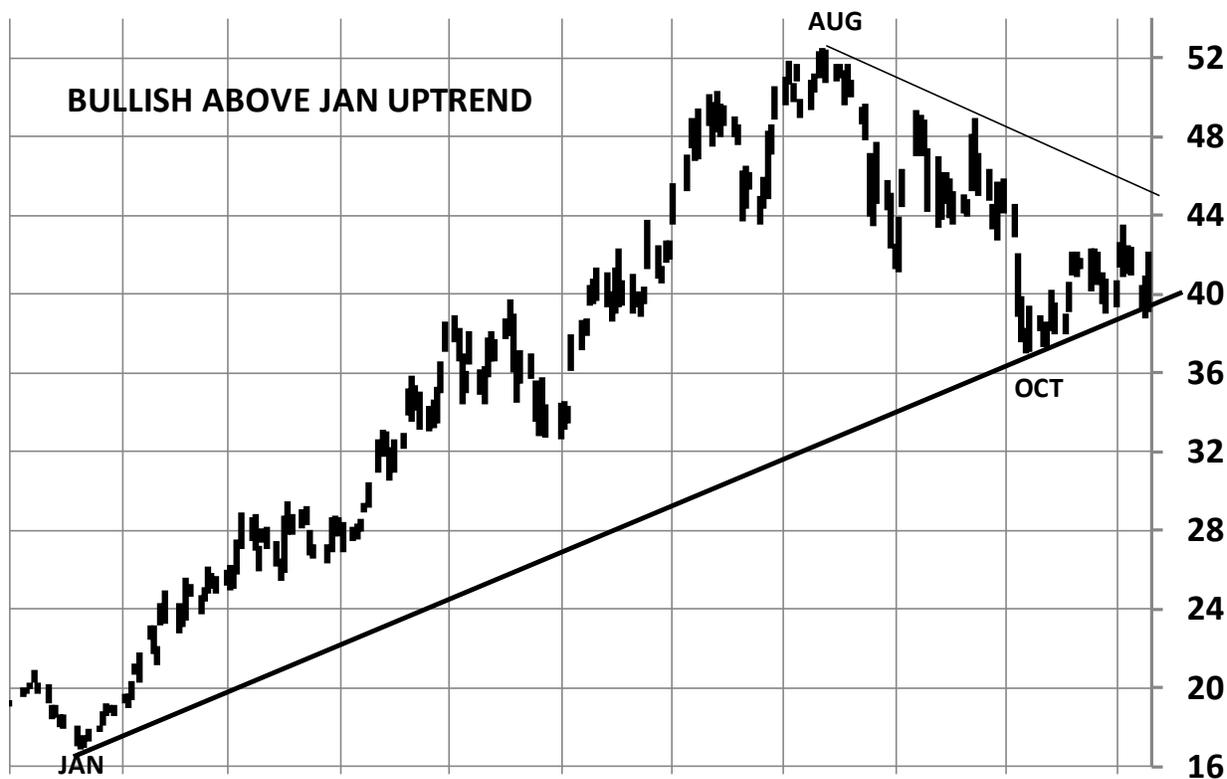

New Gold, Inc. (NGD) -Nyse mkt

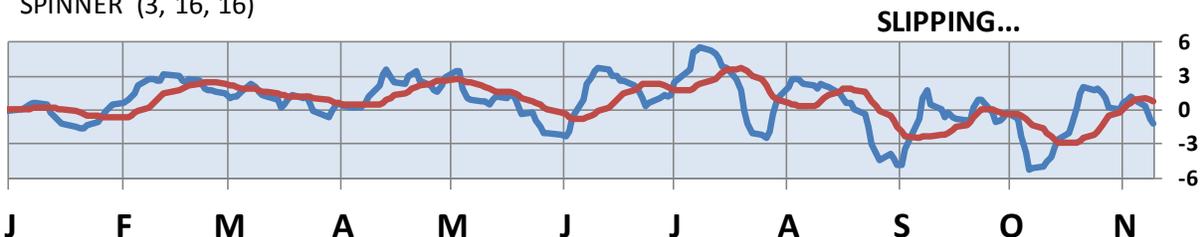

Long:	3.95 (Oct-24-16).
Profit Target	4.75, 6.
Stop:	2dc below 3.50.
New Recom:	Keep your positions.

NGD bounced quickly after testing the Mar uptrend. Spinner is on the rise and holding above zero showing potential for upside. NGD's bullish downside wedge with an upside target at 5 remains valid. However, NGD must break above this key resistance to show renewed strength that could push it to test the Aug highs near 6. If it fails, we could see NGD decline and re-test the Mar uptrend near 3.75. We recommend holding on to your position and protecting at least some profits near the Aug downtrend.

MKT VECTORS JR. GOLD MINERS (GDXJ) 11/09/2016 CLOSE= 40.24

SPINNER (3, 16, 16)

Junior Gold Miners ETF (GDXJ) - NYSEArca

Long at: 41.50 (Nov-3-16), 40 (Nov-7-16).

Stop: 2 dc below 36

Profit target: 46 & 50

New Recom: **Keep your positions.**

GDXJ is an ETF made up of junior gold mines. It allows us to capitalize on their upside potential without being exposed to risk from individual junior mines. GDXJ slipped below the Jan uptrend but managed to bounce back above it showing strength. GDXJ must now break above the Aug downtrend on a 2dc above 45 to show renewed strength. Spinner is slipping below zero showing a sign of weakness and declining momentum. However, we recommend keeping your positions for now and while GDXJ holds above its support near 36.

United Parcel Service, Inc. (UPS) 11/09/2016 CLOSE= 112.7 US\$

NYSE - NYSE Real Time Price. Currency in USD

New Recom: Buy on a pull back to 110 or better. Place stops at 2dc below 106. Profit targets at 125 & 140.

United Parcel Service (UPS) is one of the leading Transportation companies. It has outperformed most Transportation companies making it an ideal stock to own and try to gain from upside potential within the sector. UPS broke above a key resistance level showing impressive strength. The Transports have been lagging the rest of the stock market all year long. With the Transportation Average breaking above a key resistance, we're now seeing strength that could push the Transports to their all-time highs. On the downside, the Jul low support is a strong one. Keep your position as long as UPS holds above this level.

All charts in *GCRU* are daily prices.

Subscribers can obtain free online chart updates for all gold shares in *GCRU* via: www.bigcharts.com. To view Canadian stks please use CA as prefix (ie, to view Agnico Eagle (Toronto) you must use CA:AEM).

Note: U should NOT feel our recommended prices are set in concrete. If mkts suddenly feel hot or cold to U, or dramatic news occurs, U can buy or sell, or stop at slightly higher or slightly lower prices. It also hinges on your experience level. Some people can use our prices as guides & know when they can take bigger risks.

Spinner: Spinner is an in-house momentum indicator (not always shown on charts). Momentum indicators use the rate of change in price to determine predominant energy flows. Spinner trading signals are generated when the faster timing line crosses above or below the slower confirming line. Upside crosses in the lower range of positive territory offer the most reliable signals for longs; downside crosses in the top range of negative territory for shorts. Avoid trading against the timing line, ie, buying/selling if the timing line is in corrective mode (against direction of trade) unless the confirming line is positioning for a new 'confirming cycle'. It's important to always be aware of location, direction & cycling phase of the confirming line. Spinner signals are more effective in trending mkts than in trading ranges where indicators such as Stochastic & Williams %R should be used.
