U.S. LOOKING BETTER WHILE EURO STRUGGLES

Gold remains strong, in it's now four week renewed rise, as uncertainty continues.

The Eurozone remains in a vulnerable situation. Even though Berlusconi stepped down and Italy and Greece are taking steps (slowly) in the right direction, there is still a crisis of confidence going on. Investors are turning to the safety of Germany as they fear the *Eurozone is facing a recession*, and the debt crisis is now spreading beyond Italy.

French bond yields, for instance, as well as Spanish yields (and others) are following Italian yields to Euro-era record highs today. The spread to hold French debt, instead of German bunds, widened the most since the Euro started in 1999, which is a clear sign of uncertainty.

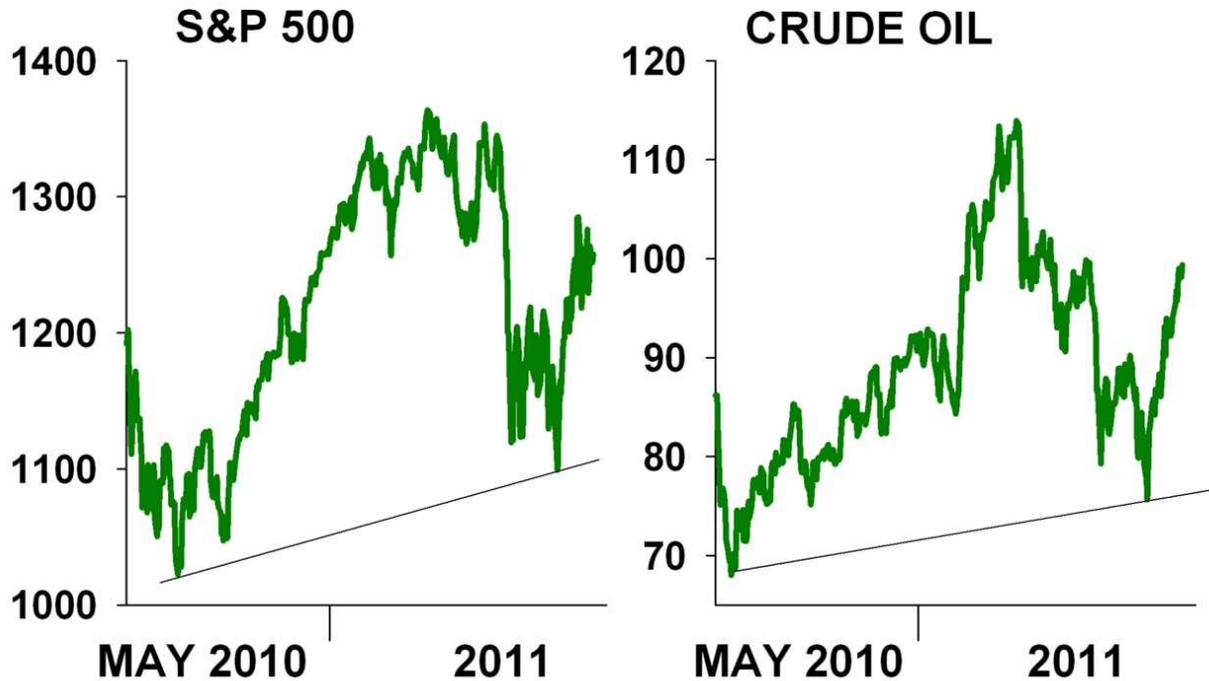

This pushed the gold price up today on safe haven buying.

Meanwhile, many are seeing U.S. growth set to improve in spite of the high unemployment rate. *Retail sales came out better than expected* and this strength is overriding the Euro concern... for now.

Oil was up on the news, approaching \$100. And the stock market is holding onto its Friday gains when a glimmer of hope in

MOVE TOGETHER WITH GLOBAL ECONOMY

DAILY PRICES

Europe caused investors to push up equities.

But overall, a firm stock market and the rising crude price tend to reflect the outlook for the global economy, see chart above. This could be why speculators increased their wagers on rising raw material prices to a seven week high.

We, of course, still have to take these markets one step at a time and for now, the safe havens, gold and the U.S. dollar, are holding firm.

Nevertheless, the many woes in the world are resulting in comments from the Fed, the lender of last resort. They're obviously still ready to take action, if need be.

Charles Evans from Chicago was the latest example as he called for more accommodation to reduce the high unemployment. He sees the need to step outside the comfort zone and take chances. Janet Yellen also expressed the need for European leaders to take forceful action to curb the Euro crisis.

So it's no wonder that the **world central banks and investors continue to accumulate gold**.... We must be prepared for the next breakout in gold. If it

breaks down, buy buy buy! If it takes off from here, there may be no turning back. The main strategy is to be well positioned for the next upmove.

As an aside, there was an interesting article in *MarketWatch* about the younger generation buying gold. They don't see gold as our generation does.

Since the 2008 meltdown, this generation in their 20s and 30s, feel it's all about too much risk everywhere.... in stocks, bonds and currencies. They've seen too many boom and busts in their adult life and they're more inclined to consider alternative investments as they have little faith in equities.

This essentially means that all age brackets are buying gold. Yes, the bull market, both technically and fundamentally, has only just begun, in spite of the already almost 11 year bull market.

CHART TALK

Despite the lack of excitement in the market this week, especially when considering the volatile year we've had, we're seeing the markets resist at old highs and/or downtrends. This means that the strength behind the rise since Oct may be over and we could expect some upcoming weakness.

Following the plunge in September when gold and gold shares fell sharply, we first talked about an upcoming rebound rise. We felt and still do that if this renewed strength does not fuel a breakout, then we'll probably continue to see a downward correction.

Our ST indicators are telling us that gold shares have reached an intermediate top and they have more downside risk than upside potential, at least for now.

HUI continues to resist below the Sept highs. Spinner for HUI has topped at overbought and started to decline, breaking below its MT MA, which is another indicator suggesting weakness

Moreover, the S&P500 also continues to resist below its July downtrend, lacking strength to rise into new highs. A decline in the S&P500 will ultimately affect gold shares to some extent, and especially if some weakness or consolidation in the gold price occurs at the same time (*see page 18*).

The bouncing up stock market together with a rising gold price since October has been a perfect combination for gold shares. But HUI has already rallied an approximate 26% from the intraday lows in October to the intraday highs in November, in only 5+ weeks.

Also, HUI and our gold share positions are resisting below the Sept highs, being unable to break clearly above their resistance levels.

Moreover, if gold continues to rise solely on safe haven demand, we'll unlikely see gold shares follow. This is why we've been recommending taking profits on your gold shares and moving them into gold.

However, we haven't lowered our guard completely on the gold share front. We still recommend keeping a small part of your positions in the best performing gold

shares as gold continues to hold up strongly at current levels while S&P500 and gold shares continue to test their old highs.

This means that the rise in gold shares may not be over just yet, as a break above its resistance would give gold shares added strength to rise to new highs bringing back double digit profits from your current position.

Gold and the Dollar Rising on Safe Haven Demand

For the most part, gold and the dollar move in opposite directions. We've shown this in the past and shouldn't be a secret for anyone. Gold tends to be an investor's hedge against a weakening dollar which is one reason why these move separately.

However, weakness in the euro

**GOLD AND THE DOLLAR:
NORMALLY MOVE OPPOSITE**

U.S. DOLLAR INDEX

DAILY PRICES

and speculation of its breakup due to huge deficits in Greece, Italy, Spain, Portugal and others as well as their inability to resolve their sovereign debt issues have made investors turn to the dollar and gold as safe haven asset.

As you can see on the chart above, the dollar has been basing for the better part of this year, while gold has been rising into new highs. Moreover, during gold's decline in September, the dollar received a nice boost as it rose approximately 10% from its all time lows to near 80. However, since late October, when the Eurozone's crisis became more intense, **gold and the dollar began to rise together**.

It's still to be seen how much longer they will move together, but at some point they will go their separate ways. As economic uncertainty in the Eurozone continues to unveil, we'll probably see both gold and the dollar move together in the ST. In the MT and LT, the dollar will inevitably weaken as the US has its own debt excess to deal with, and emerging economic powers will continue to look to dethrone the dollar as the world's reserve currency.

Silver is moving like an industrial metal...

Silver continues to rise since the low in early October, but it's been unable to break above its 75 day MA. The \$36 level is important resistance and silver must first break clearly above it to see a first sign of a reversal in trend (see chart).

Silver's movements have been similar to copper's as it too has been resisting below its 75 day MA. This tells us that silver has been moving as an industrial metal rather than as a precious metal. You can see this clearly on the chart.

Crude is up. As with copper it tends to reflect the health of the overall economy. It's been moving together with the stock market showing us a positive perception in the markets. Nonetheless, the

resistance below the \$100 level is strong and oil must clearly surpass this level before confirming strength. Otherwise, a decline to the low 90s would then be likely.

So, what does this tell us?

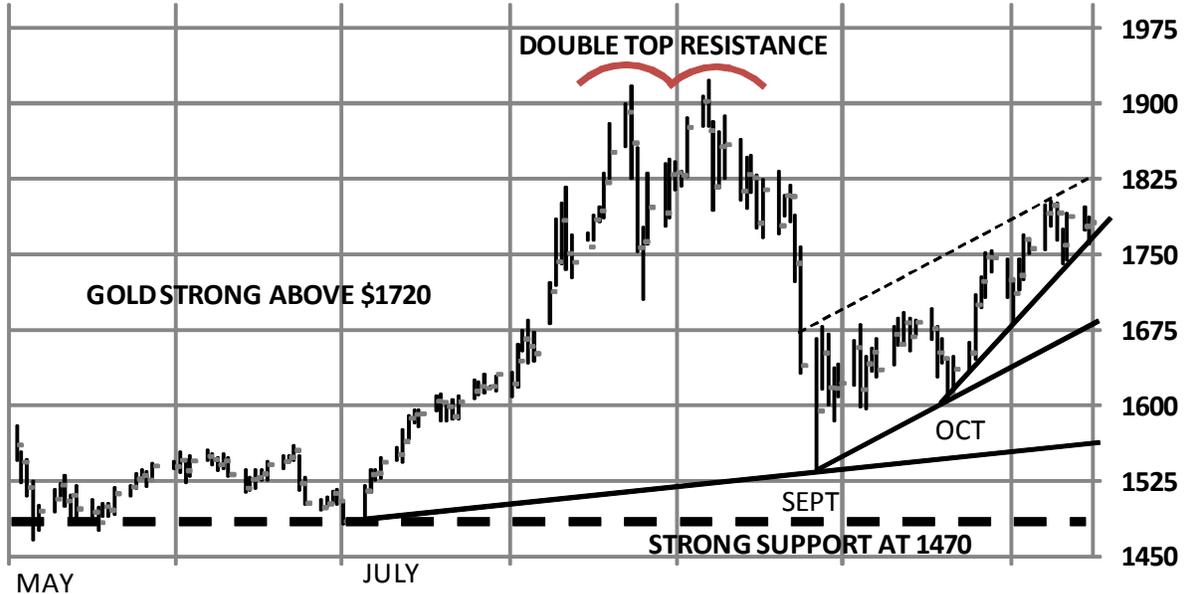

- 1) Look to sell the rest of your gold shares as per our instructions in the chart section below. We'll buy again on weakness or until resistance levels are clearly broken
- 2) Keep your gold position; if you haven't bought gold yet, look to buy at or below \$1,750.
- 3) Keep your silver and continue to buy on weakness, ideally near the \$30 level. Sell a third of your position at \$36.25.

GOLD, SILVER & INDICES

GOLD DEC 2011 (GCZ11) 11/15/11 CLOSE = 1782.2

SPINNER (3, 16, 16)

VULNERABLE BELOW MT MA

| | | |
|--------------|-----------------|--|
| Open trades: | Long at: | Entry level: 1640 (Oct-18-11), 1710 (Oct-26-11), 1750 (Nov-10-11). |
| | Stop: | All: 2dc below 1594. |
| | Profit targets: | 1920, 2000 &/or 2200 |

New Recom: **Keep your positions. Buy more below 1750.**

Comment: Gold continues to see higher lows as the weeks go by forming a stronger 4 wk long uptrend line near 1720. Spinner is breaking below its MT MA, however, showing some weakness. Keep an eye on the 1675 level, gold's Sept uptrend line, as its becoming an important intermediate support. A break below it would signal weakness and a decline to its next support, the 1594 level could then be likely. Moreover, a mini upside wedge with a downside target of 1675 seems to be forming. Gold must break above the 1800 on a 2dc to cancel the wedge and show ongoing strength.

SILVER DEC 2011 (SIZ11) 11/15/11 CLOSE= 34.456

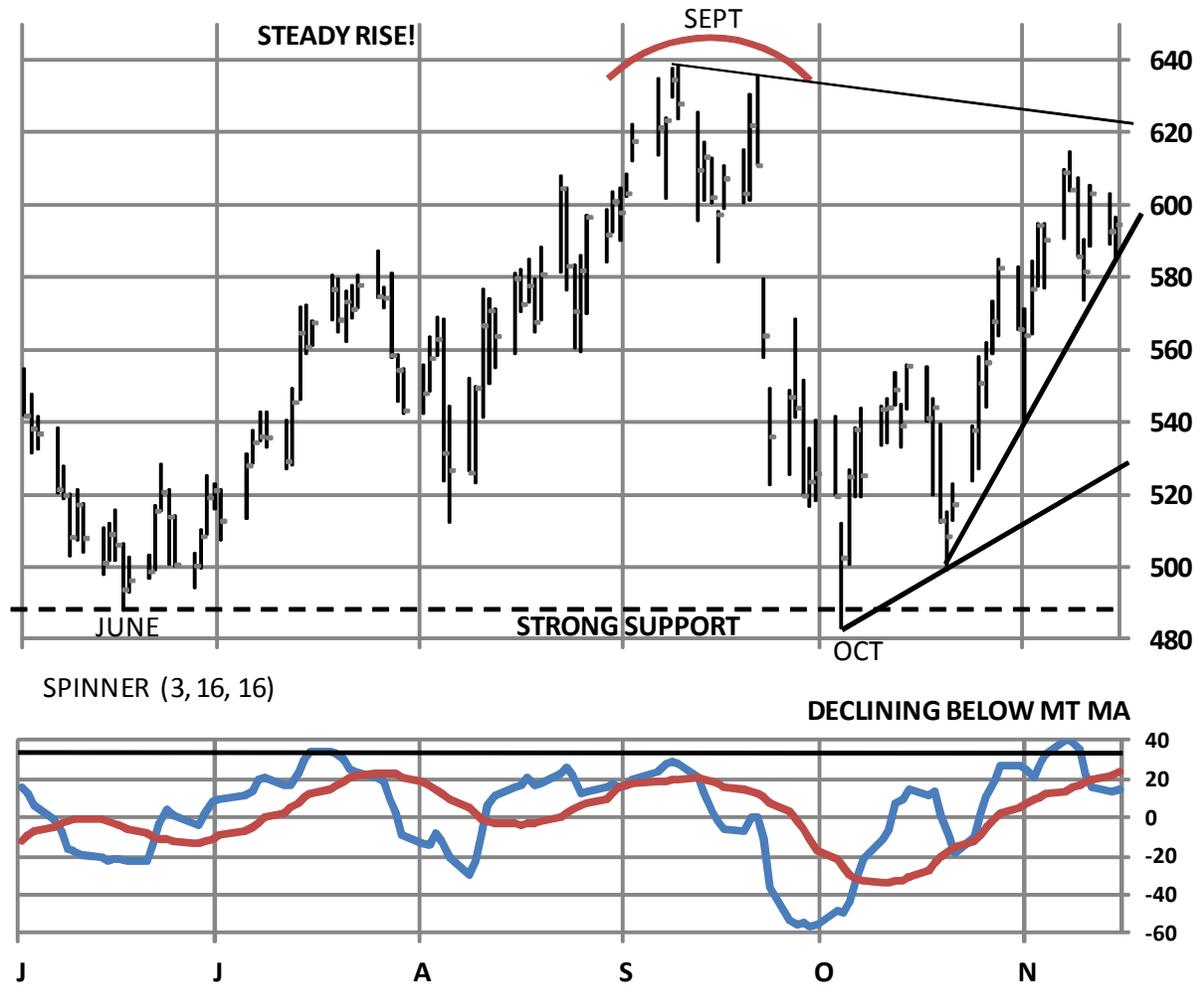

| | | |
|--------------|-----------------|---|
| Open trades: | Long at: | Entry Level: 29.65 (Sept-28-11), 29 (Oct-4-11) and 29.95 (Oct-20-11). |
| | Stop: | ST & MT: 2dc below 29.90. |
| | Profit targets: | 36.25, 40 &/or 49. |

New Recom: Should have 2/3 of position. Sell another third at 36.25

Comment: Continues to resist below its 75 day MA at 36 while forming an upside wedge. Spinner broke below its MT MA telling us that weakness is likely upcoming. Keep an eye on the 33 level as silver would be vulnerable below it. Moreover, a clear break below it would confirm wedge and a decline near 31 would then be possible. On the upside, the 75 day MA continues to mark the trend. A break above this 36 level on a 2dc would show renewed strength and a rise to the Apr downtrend line near 40 would then be likely. A break above the 40 level would show us a reversal in trend and a rally to test old highs would then be possible.

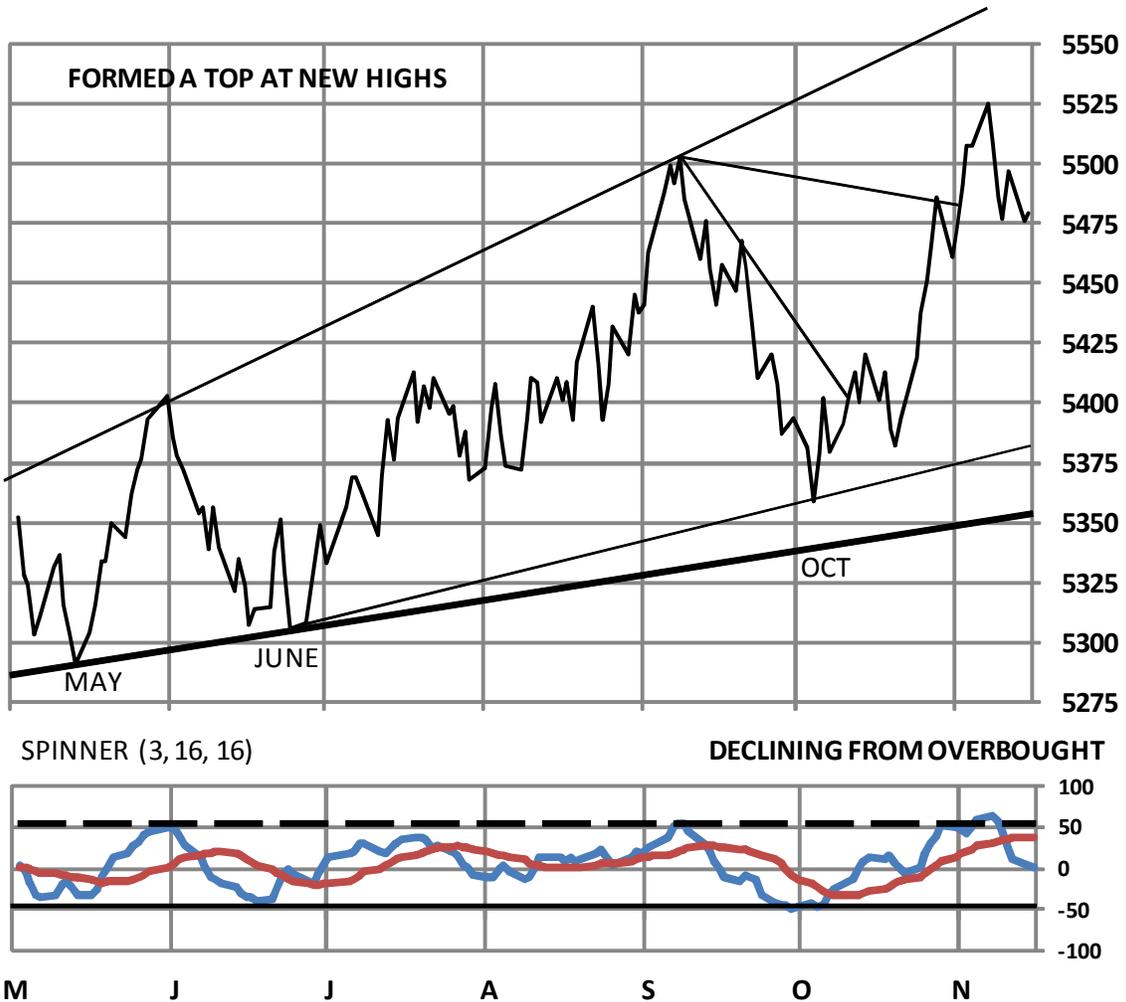

HUI GOLD BUGS INDEX (HUI) 11/15/11 CLOSE= 595.03

Comment:

HUI continues to resist below the Sept highs, below the 620 level. Spinner topped at overbought and has started to decline, breaking below its MT MA telling us that some weakness is likely in the ST. HUI is firm above its 75 day MA at the 570 level, but a break below it means a decline to test its Oct uptrend line at the 530 level is possible. A break below this level would confirm weakness and a decline to HUI's year long support would then be likely. Nonetheless, HUI is strong above its 75 day MA near 570 and very strong above its Oct uptrend line at the 590 level. If HUI can hold above these levels, we'll likely see it advance further into new highs, once the 620 downtrend is cleared on a 2dc. Until then, HUI is vulnerable, with some downside pressure. We'll buy back in once HUI breaks above its resistance or at a bottom. Dont buy yet.

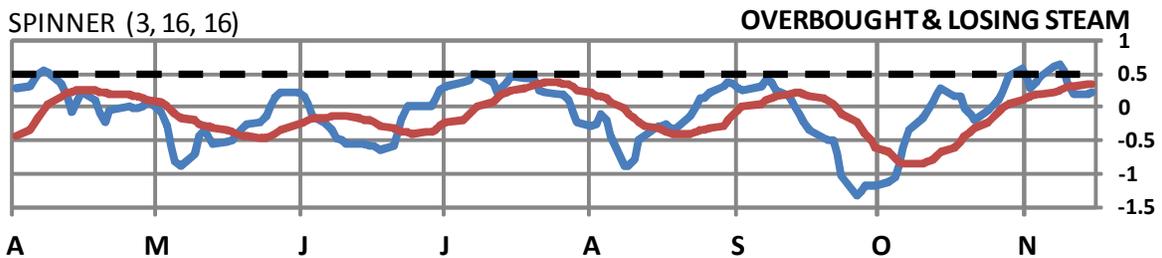

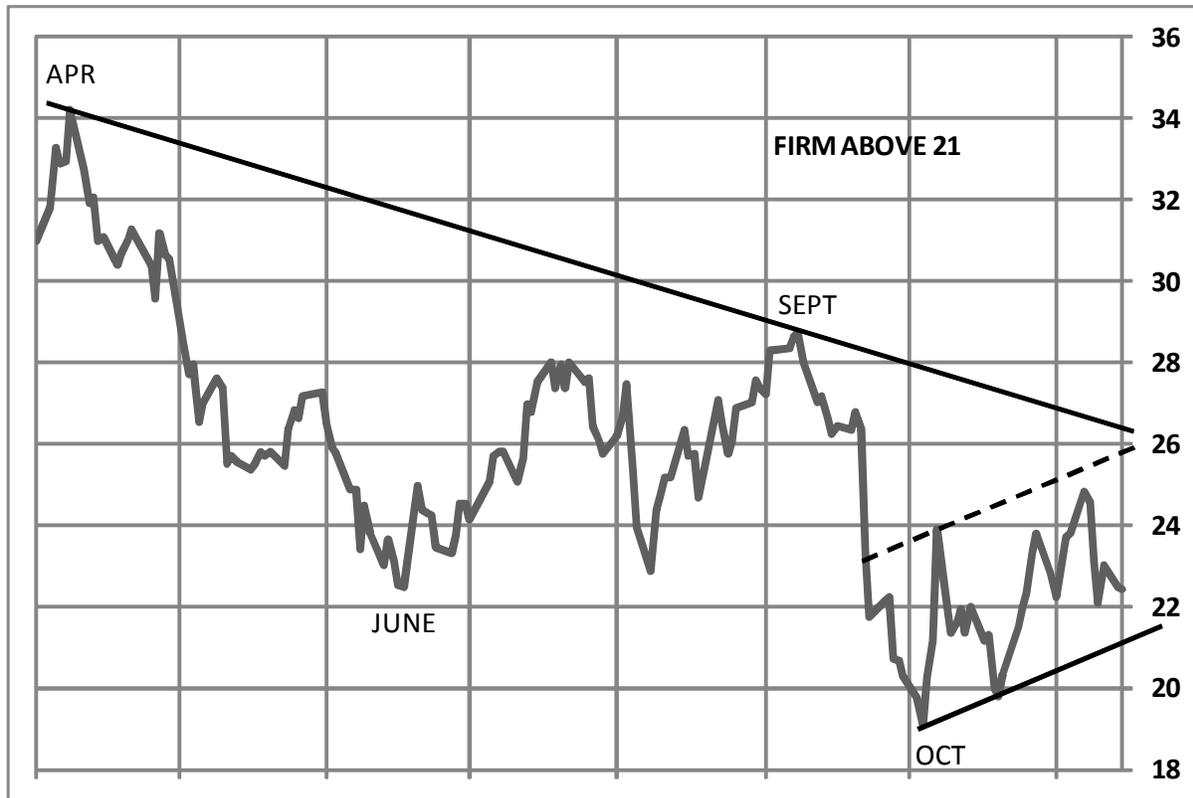

ADEN GOLD STOCKS ADV/DEC LINE 11/15/11 CLOSE=5479

Comment:

The Adv/Dec Line is forming a top at the upper side of the funnel and has started to decline telling us that the rise in gold shares may be over. Spinner declining from overbought levels, below its MT MA with room to decline further, telling us that we could expect weakness in the ST. However, if after weakness, the Adv/Dec Line can hold above the June uptrend line near the 5400 level, we'll likely see it regain strength and resume its rise once again to the top side of its funnel. We'll wait for weakness to buy gold shares once again.

ADEN SILVER SHARE INDEX (ASSI) 11/15/11 CLOSE= 22.41

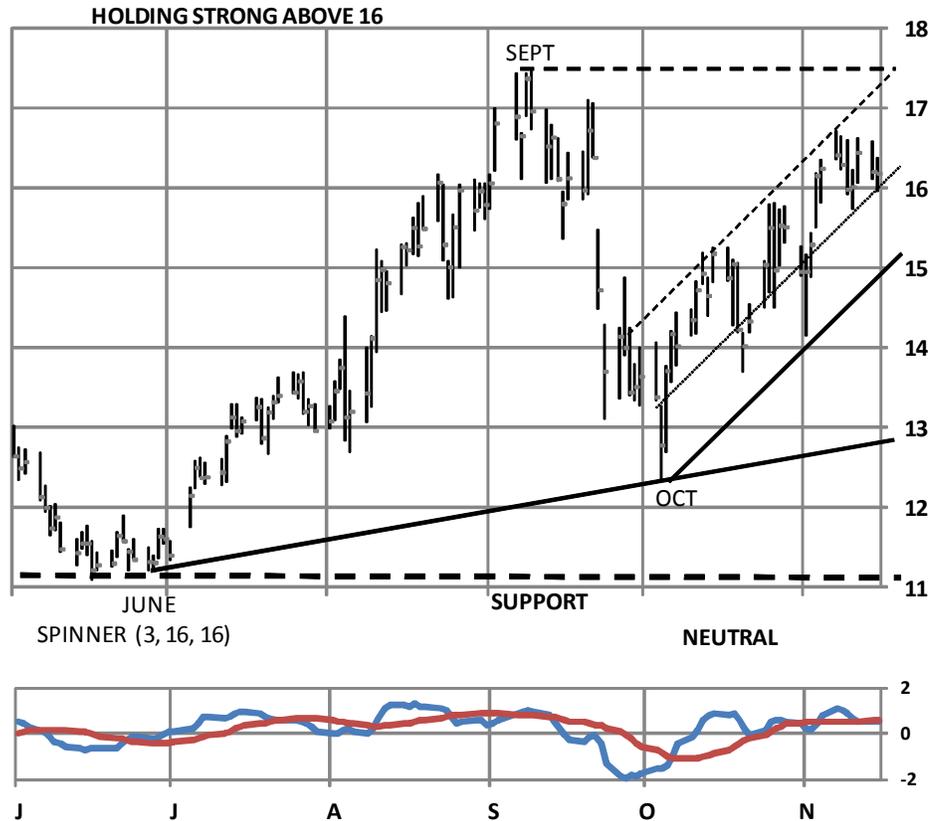

Comment:

ASSI found resistance near the top side of the Oct upchannel and Apr downtrend line convergence. Also, Spinner confirming strong resistance as it's started to decline from overbought levels, breaking below its MT MA. Keep an eye on the Oct uptrend line, as it's starting to becoming an important intermediate support. ASSI is firm by staying above it, and it could then rally to the Apr downtrend line and the top of the Oct upchannel convergence near 26. A break below it at 21 would confirm weakness.

STOCKS

YAMANA GOLD (AUY) 11/15/11 CLOSE= 16.2 US\$

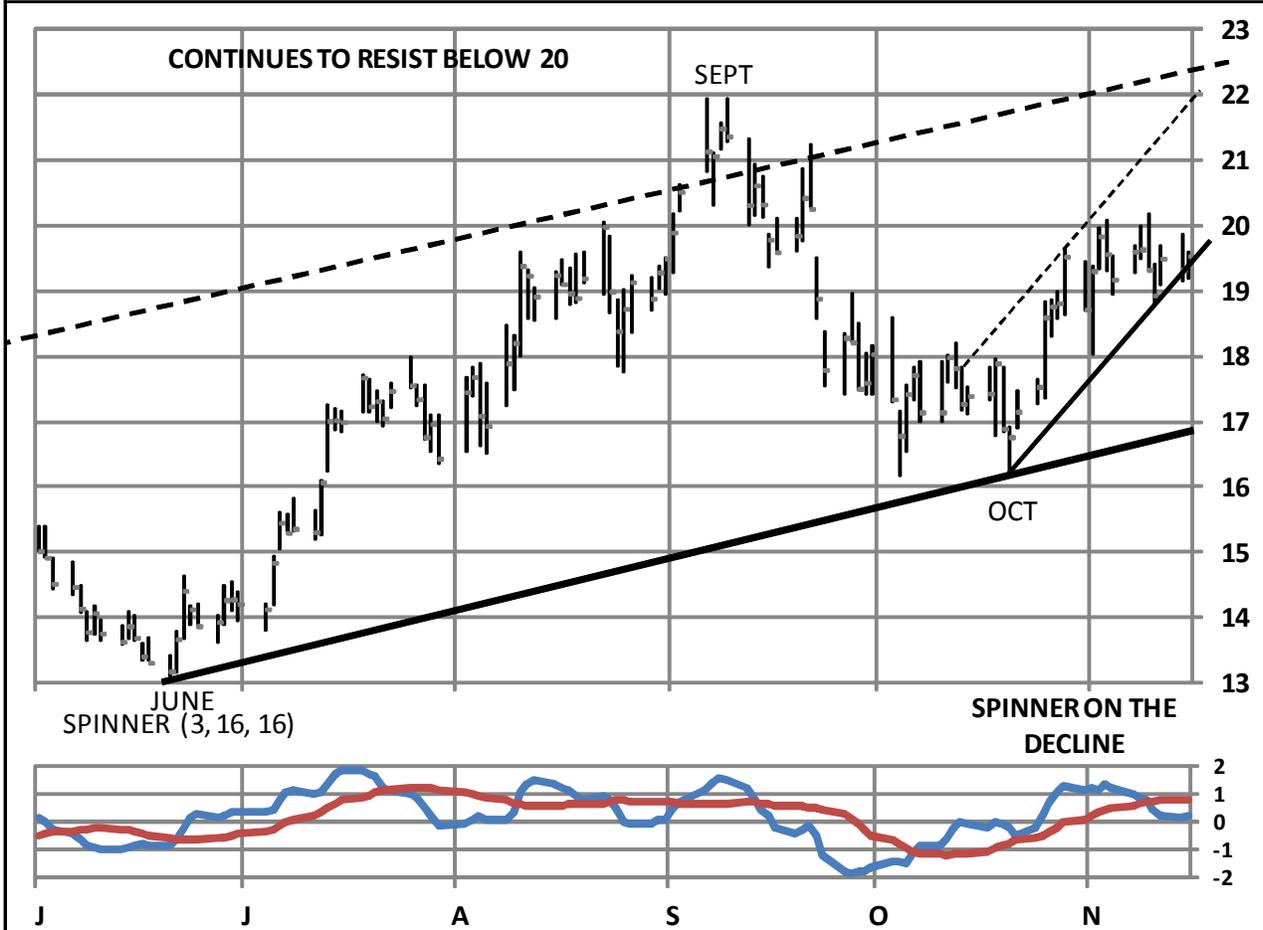

Yamana Gold (NYSE:AUY); gold: US\$ Also trade TSX:YRI

| | | |
|--------------|----------------|---|
| Open trades: | Long at: | Entry Level: 16.50 (Sept-21-11), 13.90 (Sept-28-11) and 13.40 (Oct-3-11). |
| | Stop: | S/T & M/T: 2dc below 12.80. |
| | Profit Target: | 17 (adjusted) &/or 20. |

New Recom: Should have second half of your position. Sell the rest above 16.50. Sold half last week at 16 for an average gain of 9.5%.

Comment: AUY continues to hold above the middle of the Oct upchannel near the 16 level where its looking strong. Its 75 day MA is converging with the Oct uptrend line near 15.25 where its looking strong. On the downside, Spinner topped at overbought and has started to decline, looking to break below its MT MA, showing some vulnerability in the ST. Moreover if AUY continues to resist below 17, it'll likely fall back to the low 15s, its Oct uptrend line. A break below this level would take AUY to its next support near the 13 level. We'll wait for confirmed strength after a 2dc above 17 or a decline that holds above the 15 level to buy again.

ELDORADO GOLD (ELD.TO) 11/15/11 CLOSE= 19.55 CAD\$

Eldorado Gold (TSX:ELD) Also traded in NYSE:EGO, ASX:EAU

| | | |
|--------------|---|--|
| Open trades: | Long at: | Entry Level: 19.25 (Aug-31-11), 18 (Sept-28-11) and 17.30 (Oct-3-11) |
| | Profit Target | 20 &/or 21 (adjusted). |
| | Stop: | ST & MT: 2dc below 16.50. |
| New Recom: | Sell the rest of your position at 20. Sold last week half of our position for a gain. | |
| Comment: | Continues to move sideways but remains above its 75 day MA where its holding firm. The 20 level continues to be an important resistance and must break above it to confirm strength. On the downside, a clear break below the 75 day MA after a 2dc below 19 would show weakness and a decline to test the Oct lows near 16.50 would then be likely. Spinner is vulnerable suggesting weakness. | |

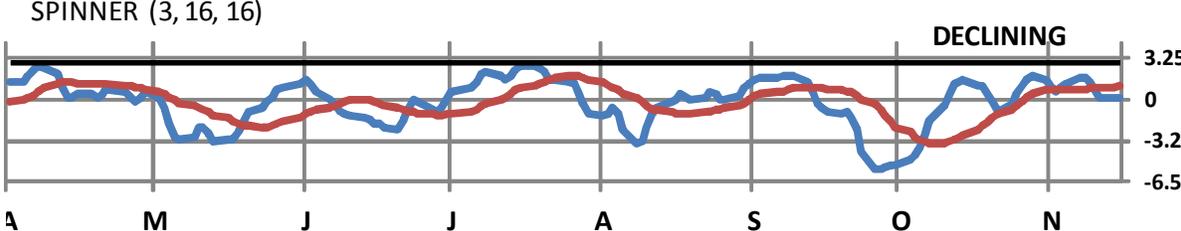

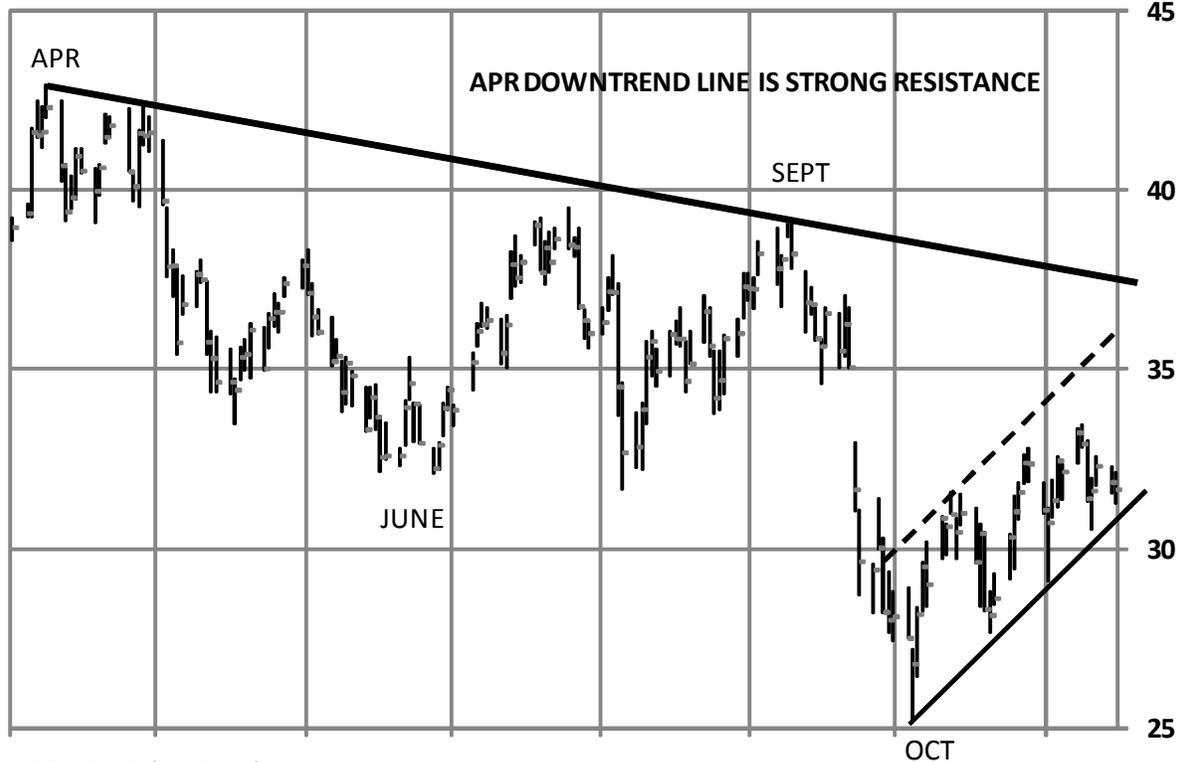

NEW GOLD (NGD) 11/15/11 CLOSE= 11.58 US\$

New Gold Inc. (NYSE/AMEX:NGD) Also traded in TSX:NGD

| | | |
|--------------|---|---|
| Open trades: | Long: | Entry Level: 11 (Sept-28-11), 10.95 (Oct-17-11) and 10.60 (Oct-18-11). Some may have sold the rest at 12.65 for a profit :) |
| | Profit Target | 13 (almost reached!) &/or 14 |
| | Stop: | ST & MT: 2dc below 10. |
| New Recom: | If you did not sell, sell the rest at 12. Buy again after a dip below 11 that holds above 10 on a 2dc, (2011 uptrend). | |
| Comment: | Weakness. NGD was unable to break above the 13 level resistance and declined to the mid 11, breaking below its Oct uptrend line and its 75 day MA. Spinner broke below its MT MA as it's quickly reaching oversold levels. Volume increased on the declines confirming weakness. We'll look to buy again on a bottom. | |

MARKET VECTORS JR. GOLD MINERS (GDXJ) 11/15/11 CLOSE= 31.7 US\$

Junior Gold Miners ETF (GDXJ)

| | |
|------------|---|
| New Recom: | Buy after a 2dc above 33.50. |
| Comment: | Continues to rise within the Oct upchannel but still unable to break clearly above its 75 day MA near 33. Spinner broke below its MT MA and on the decline with room to fall further. Volume stronger on the declines than the rises. Mixed indicators. Stay out for now as juniors continue to lack the strength of the senior mines. Wait for weakness or a clear break above its 75 day MA to buy. |

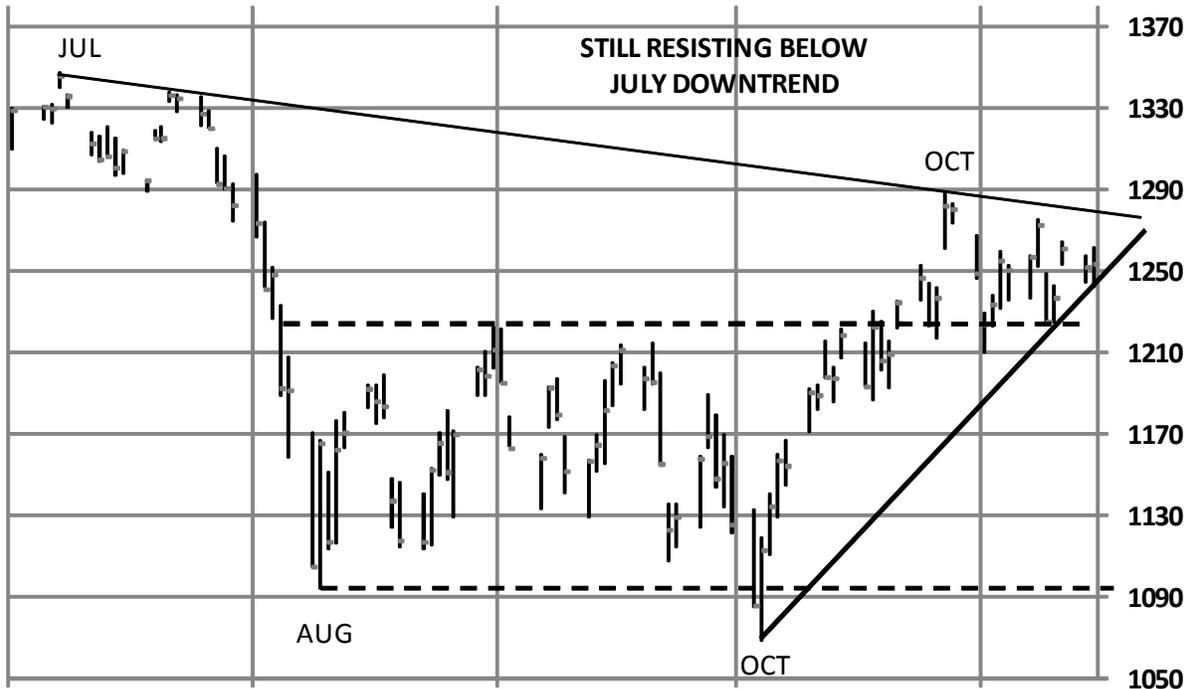

FUTURES

LIGHT CRUDE OIL DEC 2011 (CLZ11) 11/15/11 CLOSE= 99.37

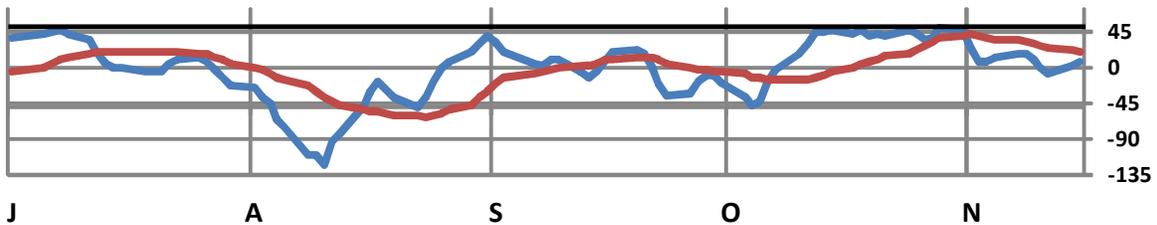

| | | |
|----------------|--|--|
| Open Positions | Long at: | Entry Level: 90.50 (Oct-26-11) and 91 (Nov-2-11). Sold half at 97 and the second half at 98.50 for an average 7% gain! |
| | Profit Targets | 99 (reached!) and 102 |
| New Recom: | Wait for weakness to buy again or after a 2dc above 100. | |
| Comment: | Crude continues its robust rise but has found some resistance below the 102 level, while forming a rising wedge with a downside target of 87. If crude breaks above the 100 level on a 2dc, we'll likely see it continue to rise. On the downside, a break below the 95 level on a 2dc would confirm the wedge pattern. And crude could then fall to possibly the 88-90 level. Spinner neutral within an overbought area, showing us more downside pressure than upside potential. Stay out for now and wait for the signs to buy back in. | |

S&P 500 INDEX DEC 2011 (SPZ11) 11/15/11 CLOSE= 1254.1

SPINNER (3, 16, 16)

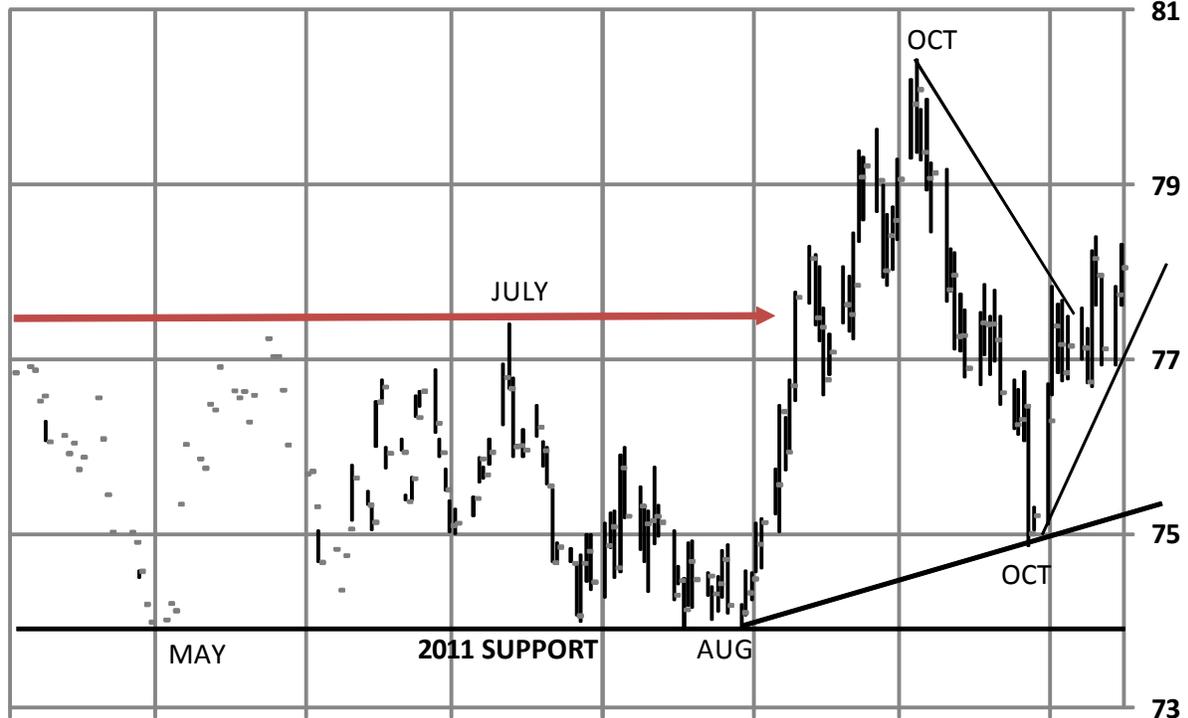

DECLINING & BELOW MT MA

| | | |
|--------------|--|--|
| Open trades: | Long at: | Entry Level: 1210 (Aug-11-11) and 1170 (Sept-21-11). |
| | Stop at: | M/T: 2dc below 1100 |
| | Profit targets: | 1290 (adjusted) &/or 1340. |
| New Recom: | Keep your position. Sell more at 1290. | |
| Comment: | S&P 500 continues to look volatile and vulnerable below the July downchannel. But its consolidating at a higher sideways level. Keep an eye on the 1220 level as it's becoming important intermediate support. A break below this level would confirm weakness and a decline to the 1100 level would then be possible. On the upside, S&P 500 must break above the July downtrend line near the 1285 level on a 2dc for renewed strength. As long as S&P 500 remains above 1220, it will show stability. Spinner below its MT MA showing weakness, but found a bottom at current level from where it could build a base. | |

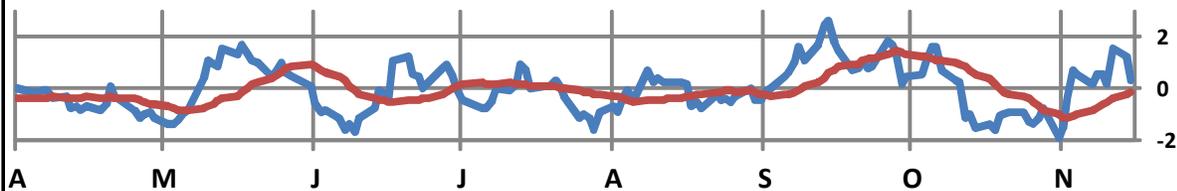

U.S. DOLLAR INDEX DEC 2011 (DXZ11) 11/15/11 CLOSE= 78.062

HOLDING FIRM

SPINNER (3, 16, 16)

STRONG ABOVE MT MA

| | | |
|-------------|---|--|
| Open Trades | Long at: | Entry Level: 76 (Sept-7-11), 77 (Sept-13-11) and 77.50 (Sept-14-11). |
| | Stop: | M/T: Sell after a 2dc below 75. |
| | Profit Target | 80 & 82 (adjusted). |
| New Recom: | Keep your MT positions. Sell half at 79. Sell rest at profit targets above 80. | |
| Comment: | Dollar continues to hold strongly above the 77 level, the July highs and Oct uptrend. Spinner rising with strength, above its MT MA, showing further upside potential for the dollar. If dollar continues to hold at current levels, we'll likely see it rise to the 80-82 level. On the downside, a break below the 77 level on a 2dc would show weakness that could take it to the 75 level, its intermediate support. A break below 75 could then see it test its next support at the 73.50 level. | |

Note: U should NOT feel our recommended prices are set in concrete. If mkts suddenly feel hot or cold to U, or dramatic news occurs, U can buy or sell, or stop at slightly higher or slightly lower prices. It also hinges on your experience level. Some people can use our prices as guides & know when they can take bigger risks.

Spinner: Spinner is an in-house momentum indicator (not always shown on charts). Momentum indicators use the rate of change in price to determine predominant energy flows. Spinner trading signals are generated when the faster timing line crosses above or below the slower confirming line. Upside crosses in the lower range of positive territory offer the most reliable signals for longs; downside crosses in the top range of negative territory for shorts. Avoid trading against the timing line, ie, buying/selling if the timing line is in corrective mode (against direction of trade) unless the confirming line is positioning for a new 'confirming cycle'. It's important to always be aware of location, direction & cycling phase of the confirming line. Spinner signals are more effective in trending mkt's than in trading ranges where indicators such as Stochastics & Williams %R should be used.
