Gold Charts R Us

●●●● GCRU #472 on November 30th, 2011 (in its 10th year)

AN ABOUT FACE

Leading up to Thanksgiving, Europe looked like it was coming to an end (financially speaking). The U.S. was close behind. Then sentiment took a turn, and so did the markets.

Optimism surfaced on several fronts. There was hope Europe could possibly work out their debt problems, along with a strong start to U.S. holiday sales and much better consumer confidence, which all gave the markets a boost.

Essentially, the markets are breathing a sigh of relief, at least for the time being, as they bounce up on the better news. The precious metals, their shares, resources, energy, the U.S. and world stock markets and the currencies... they've all been rising since Monday.

The markets are still moving together and opposite to the U.S. dollar and bonds. Gold continues to flip flop. One day it moves on fear, the next day it moves with the commodities. The main point, however, is that **gold is holding up extremely well and better than most of the markets**.

This is most important and considering the latest gold demand figures from the World

Gold Council, you can understand why it's so firm... Gold demand was up in the third quarter, but most impressive was investment demand. It was up 33%, the third highest quarter for investment demand on record, as investors across the world were looking for wealth preservation.

Central bank gold buying also soared, and once again they were net gold buyers.

Central banks know the state of the world economy and they know how to best protect themselves. This demand is set to continue as long as global uncertainty lingers, together with the growing debt crisis and monetary expansion.

The world's central banks are doing what they can to avoid an international economic slump, resulting from the debt crisis. One of their latest efforts was lowering borrowing costs, the most since 2009.

Despite this week's optimism, **the crisis has not gone away.** The world is in uncharted territory and gold is the best alternative in this environment. It's still to be seen how this will all play out. And it'll be interesting to see how long this optimism lasts.

Meanwhile, gold, silver and gold shares continue to consolidate as they form a triangle since the highs, see chart. The gold price and the stock market are both influencing gold stocks, but most important now is to watch if these markets can hold above their September-October lows.

STILL CONSOLIDATING WITH HIGHER LOWS

These lows followed the September plunge. If they're broken, the markets would be saying that bear market pressures are intensifying, at least for stocks and possibly gold shares, and it would be a sign of caution.

So keep an eye on these levels this week and use our guidelines, which follow.....

CHART TALK

Here we go again!

Gold shares are still at great buying levels! We've had great buying opportunities during the past couple of weeks and we've been recommending to buy. If you haven't yet bought, it's not too late!

We have more recommendations this week. You can add to your current position or buy new ones. We have many options to choose from, including a junior ETF, intermediate mines and seniors.

Most of our new recommendations are gold shares that are at extreme oversold levels. Most importantly, they've reached these levels while **holding at key support or uptrends**, showing us important underlying strength.

Also, the HUI and our in house Adv/Dec Line have held at their Oct and June uptrends, respectively, while our leading indicator, Spinner, has reached extreme oversold levels where it has formed a bottom. This reassures us that the **gold sector within the stock market is holding strong and is poised to continue rising.**

Gold slipped below the \$1700 level, only to quickly rise above it, this time **on higher than average volume.** Volume activity during the rise of the past two days has been the **largest** since gold's decline on Sept 26! Actually, gold has not risen on this type of volume activity since the end of Aug when gold reached record highs.

This type of activity is showing that **gold's strength is significant.** Its telling us that there's a great deal of demand for gold whenever it dips.

Investors **are bargain hunting** and they're taking advantage of any downside movement in the gold price. We've been recommending an accumulation plan of buying during weakness and we continue recommending this strategy.

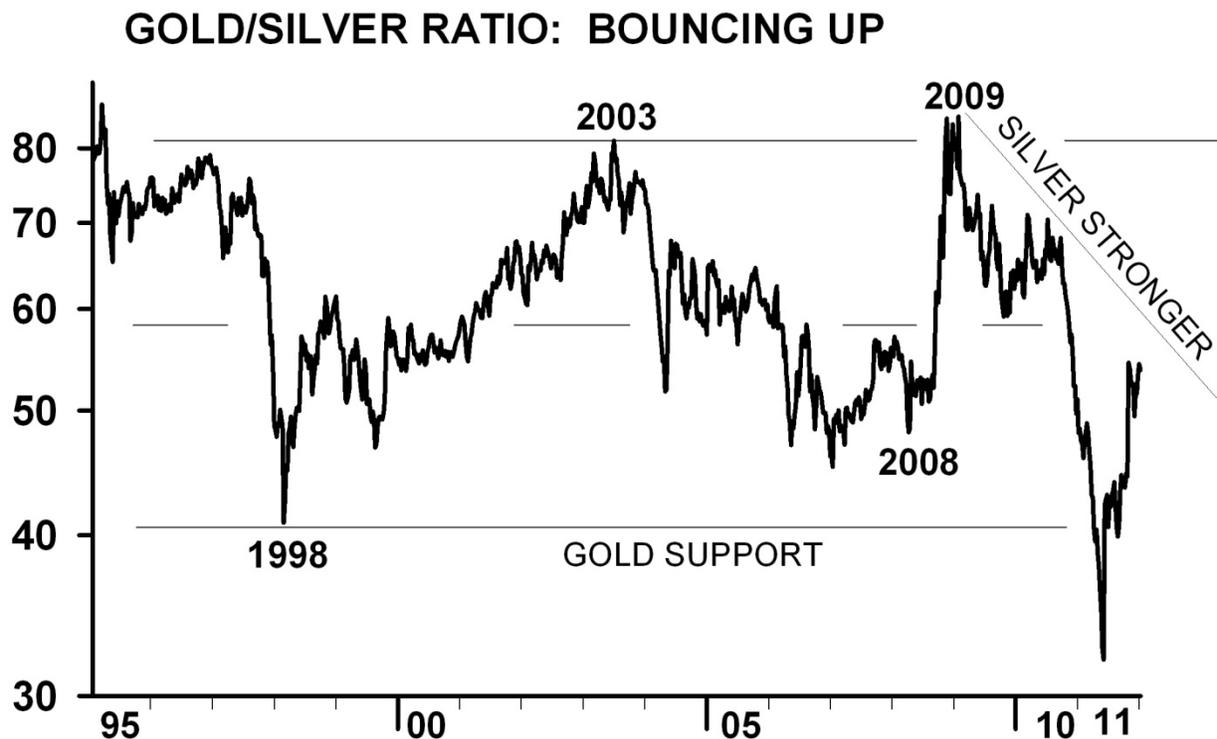

Despite gold's decline, it held above its Sept uptrend line. This uptrend is becoming an important intermediate support as it gains momentum. As long as gold stays above it at the \$1675 level, it will continue to look strong and solid.

Although gold's Spinner has not reached the extreme oversold levels it did back in Sept, it's the most oversold its been all year long, barring Sept's sharp decline. Spinner has formed a bottom within this oversold area, it's started to rise and it's on the verge of breaking above its MT MA. A Spinner breakout would show strength and signs of a possible renewed rise.

Also keep an eye on the 75 and 25 day MAs, both currently at \$1740. This level is an **important resistance** level and a clear break above it would show renewed strength that could take it to test its next resistance at the \$1800 level.

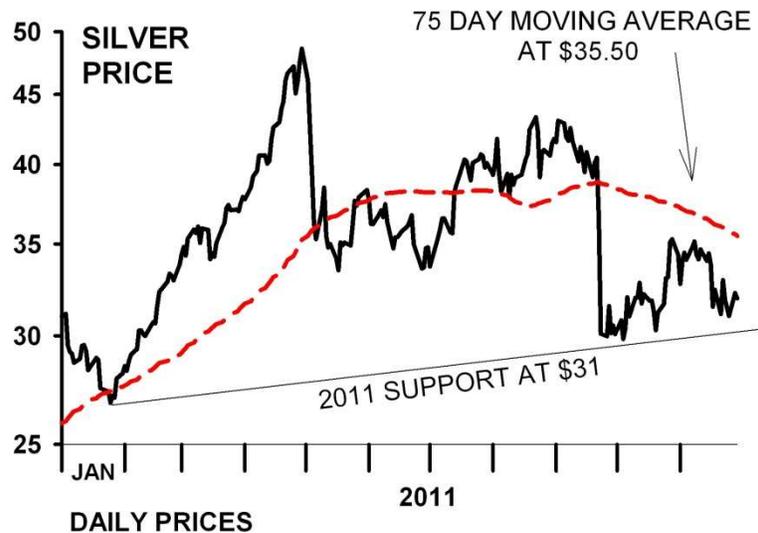

The chart above shows the bigger picture of the gold/silver ratio. Here you can see how much the ratio sold off this year when silver shot up to its peak in April. Since then, gold has been stronger than silver as the ratio is rising. Despite gold's record highs reached in September, it's still at a low area versus silver. The ratio is telling us that gold has room to continue outperforming silver. It may also be saying that silver is still working off the excesses which is why gold is the better bet...for now.

Our gold indicators are showing upside potential in gold, but our silver indicators are a bit mixed.

On the one hand, silver is holding strongly above the \$31 level, giving us higher lows since Sept. Nonetheless, its been unable to break above its 75 day MA (\$35.50) which has become a strong resistance, see chart. If silver can clearly break above this level, we'll likely see silver rise to test its Apr downtrend at the \$40 level.

BASING WITH DOWNWARD PRESSURE

Silver shares are looking weak. They've been declining since the Nov highs. Unlike gold shares, they broke below their Oct uptrend line and are currently testing the Oct lows. In spite of this weakness, the silver shares' Spinner has not reached extreme oversold levels and are not showing a clear buy, like our recommended gold shares are. This is why we recommend staying on the sidelines for now.

The S&P 500 has held above the 1150 level, meaning higher lows since the decline. This shows underlying strength that could be telling us of an upcoming renewed rise.

Moreover, the US dollar rose to an **8 week high last week**, getting closer to the 81 resistance. We took more profits on our dollars as our target was reached. Spinner for the dollar is at overbought levels, telling us that we could see some weakness or consolidation time for the dollar, which could benefit gold and the stock market in the ST.

A rebound rise in the stock market and a strong gold price would be the perfect setting for our oversold gold shares.

However, it's important to take into account that even though we are seeing a bullish outlook for gold shares, it's important for gold shares to break above their current resistance levels. If gold shares break above these levels, we'll then see solid strength. Otherwise, it's just part of a rebound rise.

As we've done in the past, we recommend taking some profits off the table when these levels are reached (first profit targets) and let the rest of your position run, seeing if resistance levels are broken.

So, what does this tell us?

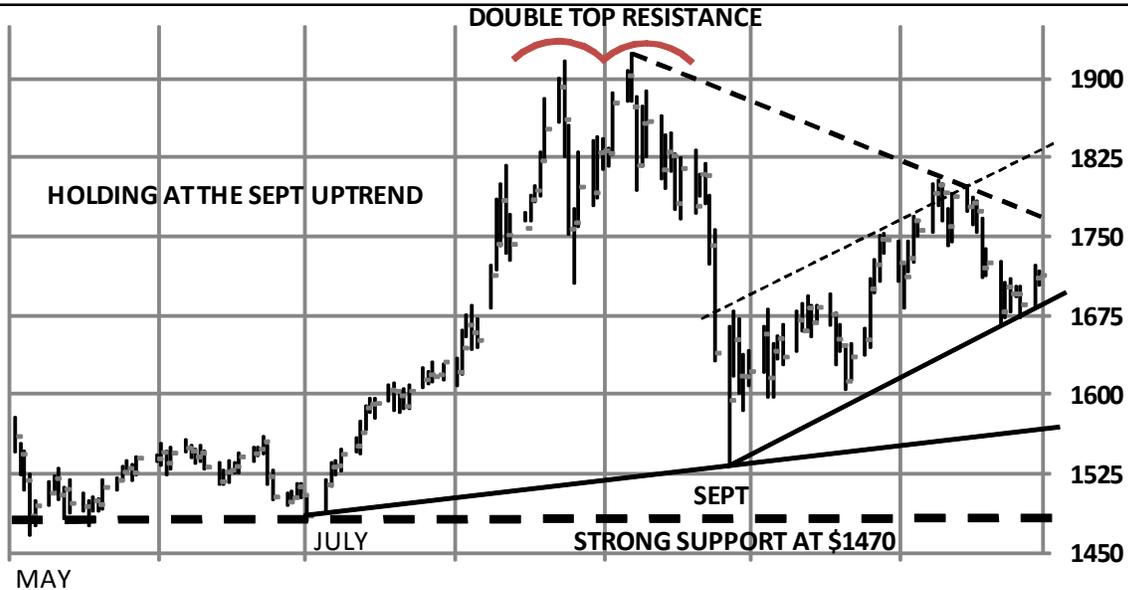

- 1) Keep your gold and silver. Buy more gold under \$1650 and more silver at or below \$31.
- 2) Keep your gold share positions, look to add to your position or buy new ones based on our recommendations. See the individual recommendations inside.

- Golden regards from *the Adens... Pamela, Mary Anne, and Omar*
- If it's Wednesday, it's *Gold Charts R Us*

(chart section below)

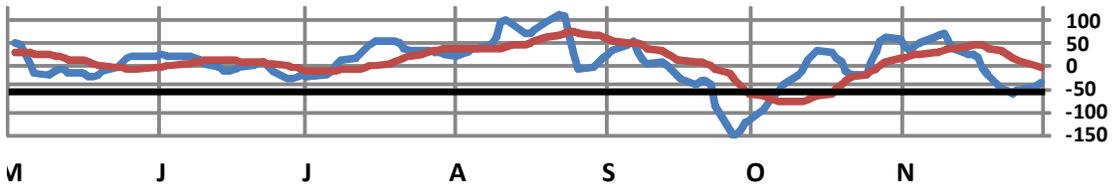

GOLD, SILVER & INDICES

GOLD DEC 2011 (GCZ11) 11/29/11 CLOSE = 1713.4

SPINNER (3, 16, 16)

BOTTOMING NEAR OVERSOLD

Open trades:	Long at:	Entry level: 1640 (Oct-18-11), 1710 (Oct-26-11), 1750 (Nov-10-11), 1725 (Nov-17-11).
	Stop:	All: 2dc below 1594.
	Profit targets:	1920, 2000 &/or 2200

New Recom: **Keep your positions. Buy more below the 1650 level.**

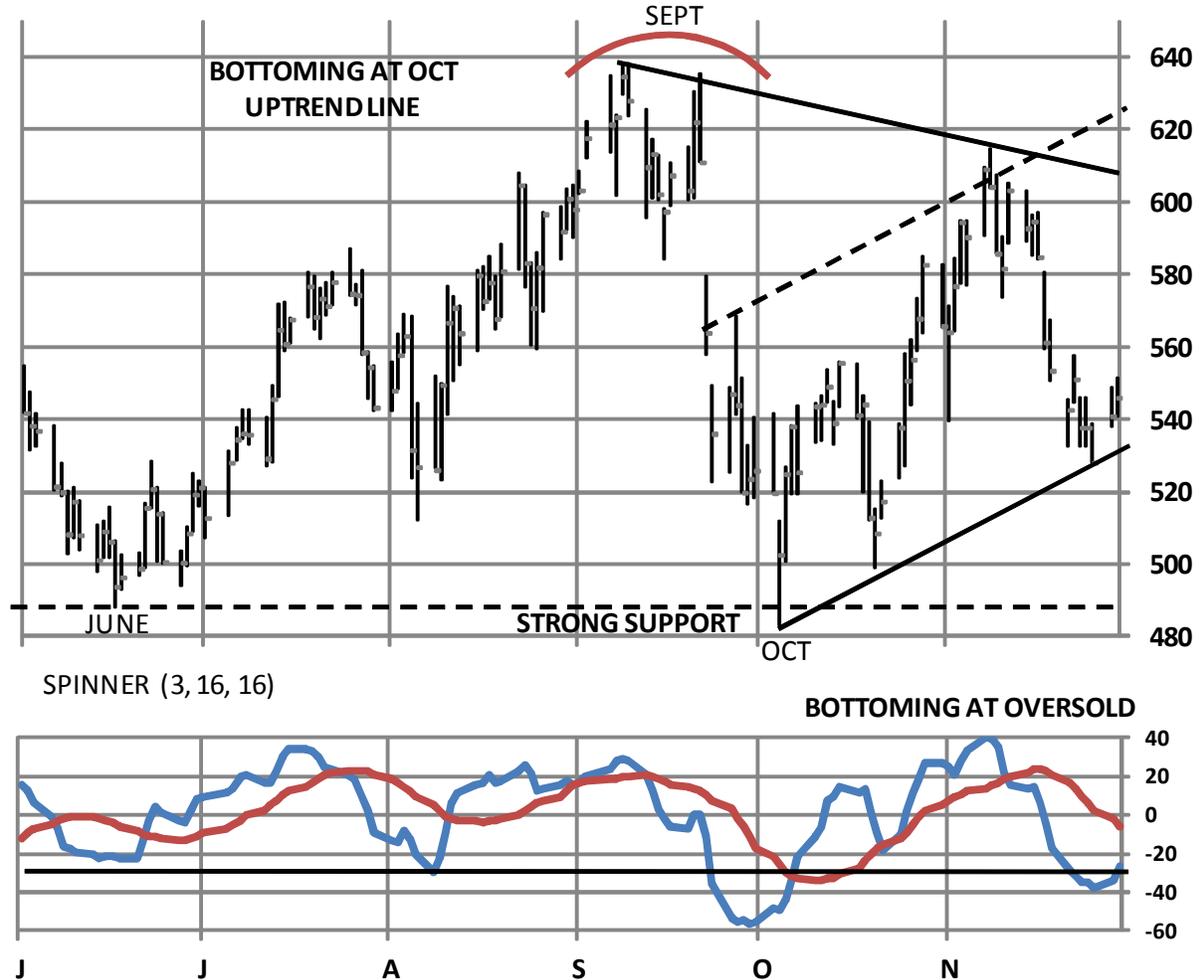

Comment: Gold continues to hold above its Sept uptrend near the 1675 level. Volume increased dramatically during the past 2 days showing plenty of demand for gold under 1700, and putting lots of upward pressure on gold. Moreover, gold continues to see higher lows since the Sept low as it continues to consolidate. Spinner has started to bottom near oversold levels, telling us that gold's upside potential is higher than its downside risk. On the downside, the double top resistance and Sept downtrend line continues to be an important resistance level, and unless broken, gold will continue in its downtrend. Both the Sept uptrend and downtrend lines are forming an important symmetrical triangle. A clear break in either direction will show us gold's next tendency (above 1775 or below 1675). Keep your positions for now and continue accumulating on weakness.

SILVER DEC 2011 (SIZ11) 11/29/11 CLOSE= 31.853

Open trades:	Long at:	Entry Level: 29.65 (Sept-28-11), 29 (Oct-4-11) and 29.95 (Oct-20-11) and 31 (Nov-25-11).
	Stop:	ST & MT: 2dc below 29.90.
	Profit targets:	35 (adjusted), 38 (adjusted) &/or 40.
New Recom:	Keep your position. Buy at the 31 level or lower. Sell a third of your position at the 35 level.	
Comment:	Support for silver at the 31 level continues to gain momentum. Spinner is forming a bottom in an oversold area. Barring extreme oversold levels reached by Spinner in May and Sept, it's the most oversold it has been all year. This means silver has some upside potential and that a rise to test its next resistance at the 35.50 level is possible. A break above this resistance would show renewed strength for silver that could then take it to test its next important resistance level, the Apr downtrend line near 40. On the downside, the Oct highs are converging with silver's 75 day MA, which has been an important resistance level for silver. If silver cannot break above this level, it'll likely continue to base, unless 30 is clearly broken.	

HUI GOLD BUGS INDEX (HUI) 11/29/11 CLOSE= 546.34

Comment:

HUI is starting to form a base at the bottom side of the Oct upchannel as Spinner bottoms at oversold levels telling us that HUI's downside is limited. If HUI continues to hold above its Oct uptrend, we'll likely see HUI rise once again to test the Sept downtrend resistance below the 600 level. A clear break above this level on a 2dc would show solid bullish action and a rise to test the all time high near 640 would then be likely. On the downside, keep an eye on the Oct uptrend as a break below it would confirm weakness and a decline to its major support at the 492 level would then be likely. HUI is well positioned to rise!

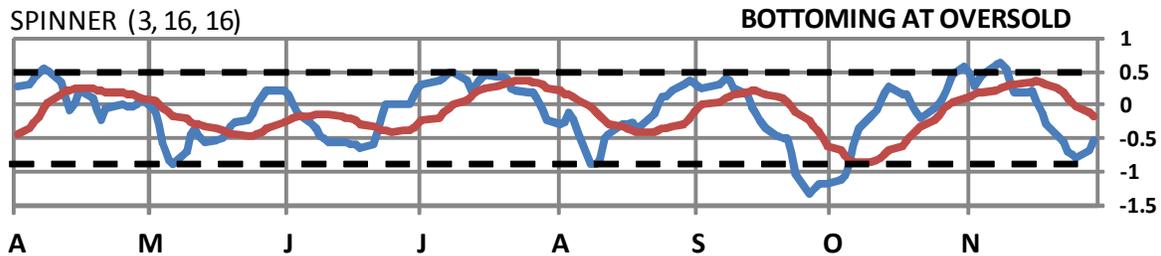

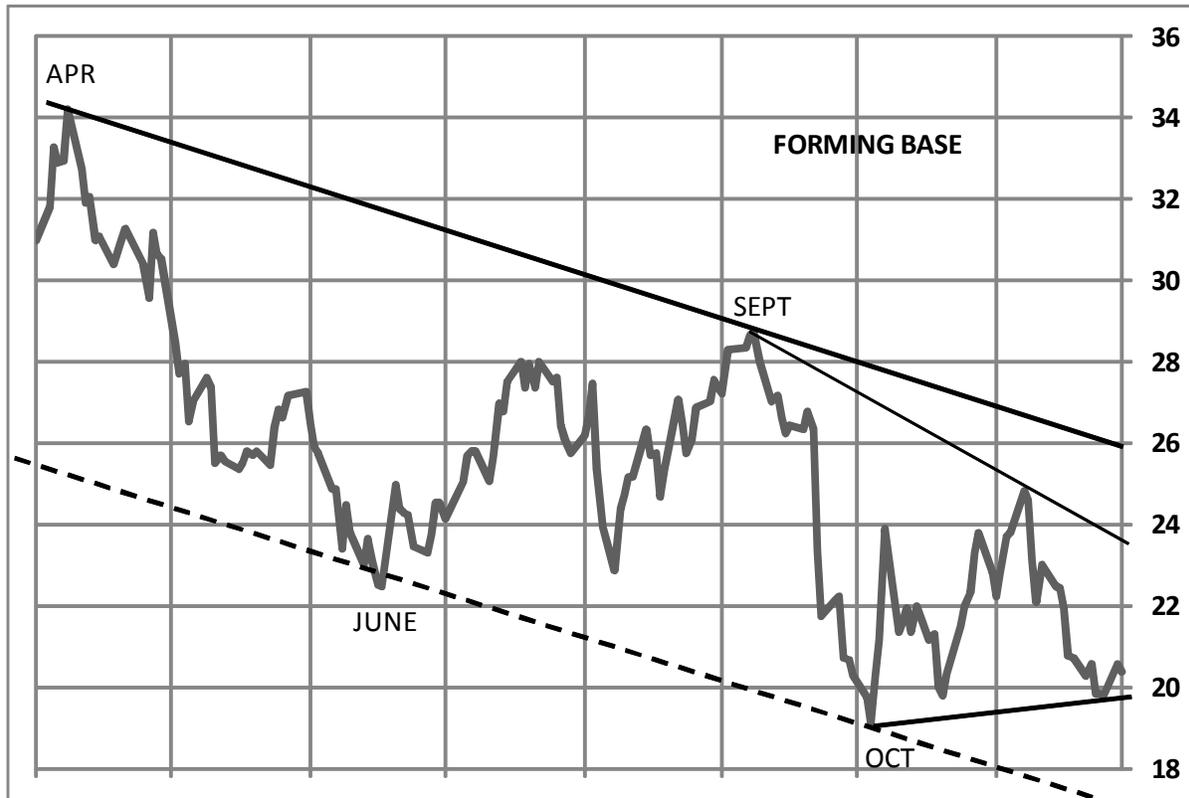

ADEN GOLD STOCKS ADV/DEC LINE 11/29/11 CLOSE=5389

Comment:

The Adv/Dec Line slipped below the 5400 level, but it's holding above its May/June uptrend, showing important underlying strength in gold shares. Spinner declined to extreme oversold levels and has started to bottom, confirming a limited downside in gold shares. If the Adv/Dec Line holds above its May/June upchannel, it's likely to rise once again to the top side of the funnel pattern, near the 5500 level. All good signs of strength. On the downside, keep a close eye on the May/June uptrend line as a clear break below it would signal more weakness and a decline to the May lows would be possible.

ADEN SILVER SHARE INDEX (ASSI) 11/29/11 CLOSE= 20.38

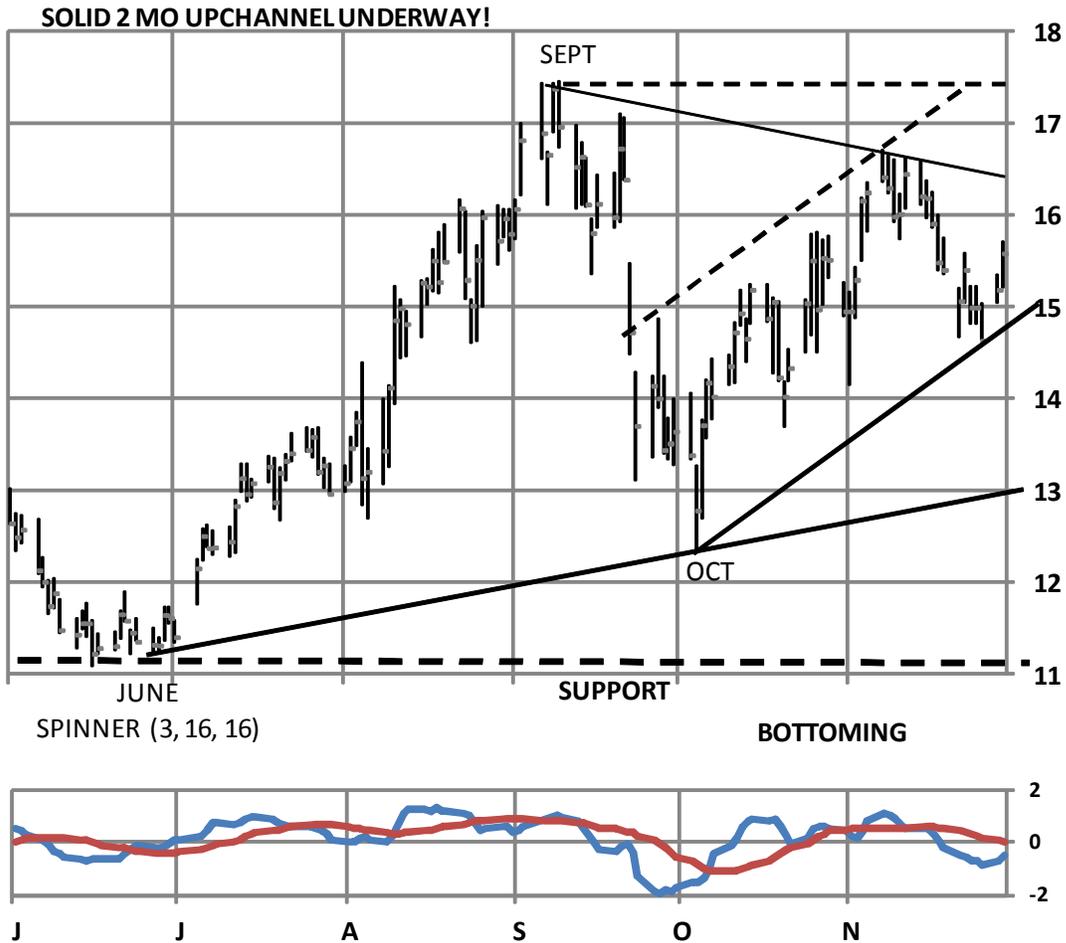

Comment:

ASSI seems to have found a bottom above the Oct lows near 20. Spinner declined to oversold levels and has formed a bottom, telling us that we could expect some strength in the ST that could take ASSI to test its first resistance, the Sept downtrend near the 24 level. A break above this level could give ASSI the strength to break above the Apr downtrend line resistance for a formal reversal in trend. On the downside, if ASSI does not break above its Sept downtrend resistance, it'll likely fall back to its Oct low support. A break below this support would show weakness and a decline to the bottom side of the Apr downchannel would then be likely. We'll be waiting for more weakness to buy silver shares or a breakout from its next resistance.

STOCKS

YAMANA GOLD (AUY) 11/29/11 CLOSE= 15.6 US\$

Yamana Gold (NYSE:AUY); gold: US\$ Also trade TSX:YRI

Open trades:	Long at:	Entry Level: 16.50 (Sept-21-11), 13.90 (Sept-28-11) and 13.40 (Oct-3-11).
	Stop:	S/T & M/T: 2dc below 12.80.
	Profit Target:	16.50 (adjusted) &/or 20.

New Recom: Sell the rest of your position at 16.50 or higher.

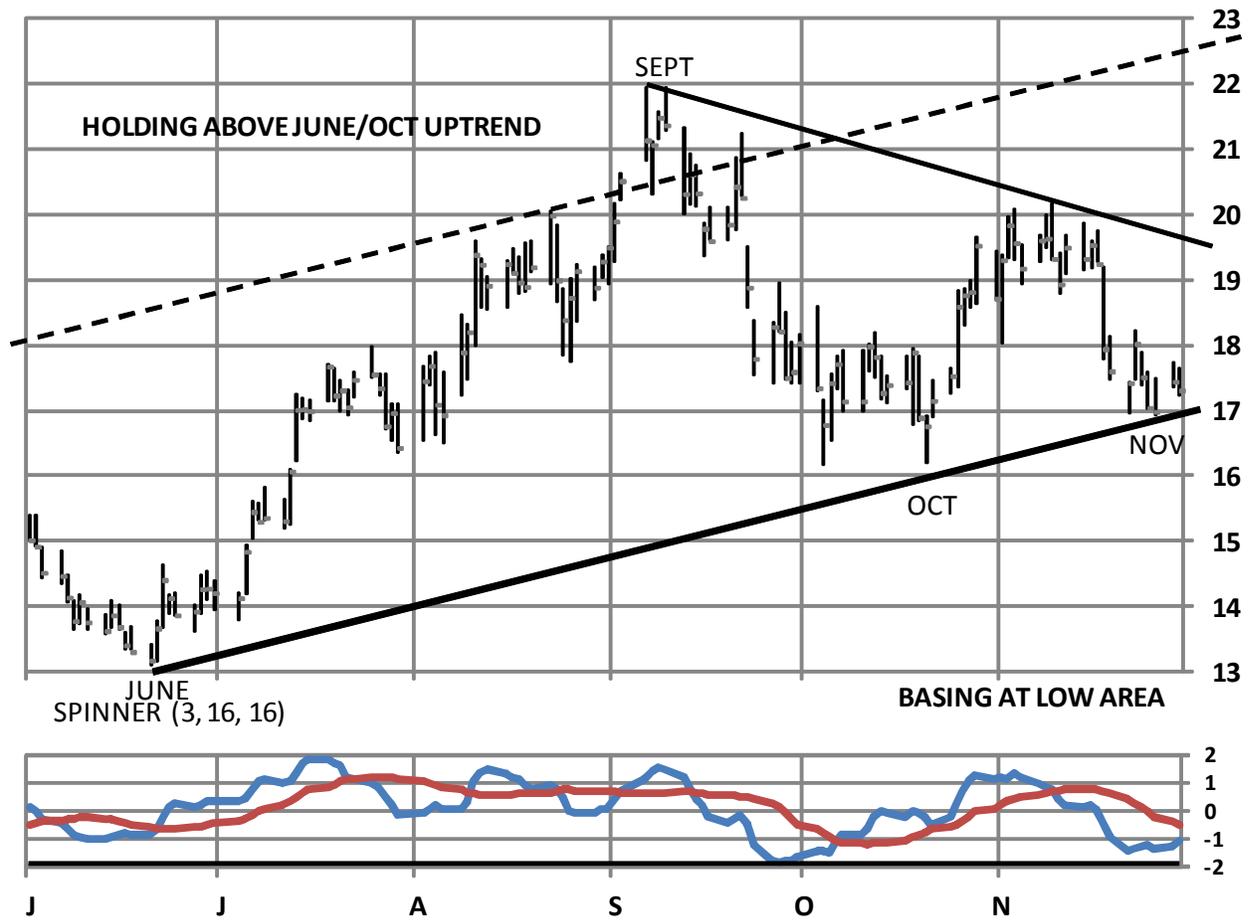

Comment: Breakout! Today AUY broke above its 75 day MA! Spinner is forming a bottom in a oversold area and other indicators showing us good upside potential for AUY. If AUY has a 1dc above the Sept downtrend at 16.50, we could see the highs near 17.50 tested.

B2GOLD CORP. (BTO.TO) 11/29/11 CLOSE= 3.40 CAD\$

Open Positions	Entry Level	3.40 (Nov-23-11)
	Stops	All 2dc below 3.20
	Profit Targets	3.90 &/or 4.15
New Recom:	Keep your position. If did not buy last week, buy at or below 3.40. Sell half at each profit target.	
Comment:	BTO.TO held above its 2011 uptrend line as its proving to be an important intermediate support. Spinner declined to extreme oversold levels and has started to bottom, telling us that there is upside potential. On the downside, a clear break below the 2011 uptrend line would show us weakness and a decline to the July lows would then be likely. Look to sell half of your position when the first resistance level is reached at our first profit target.	

ELDORADO GOLD (ELD.TO) 11/29/11 CLOSE= 17.33 CAD\$

Eldorado Gold (TSX:ELD) Also traded in NYSE:EGO, ASX:EAU

Open trades:	Long at:	Entry Level: 19.25 (Aug-31-11), 18 (Sept-28-11), 17.30 (Oct-3-11) and at 17.50 (Nov-23-11).
	Profit Target	19.50 (adjusted) &/or 21
	Stop:	ST & MT: 2dc below 16.50.

New Recom: If did not buy last week, its not too late to buy below 17.50.

Comment: ELD.TO continues to hold above its June/Oct uptrend line above the 17 level. Spinner is basing at oversold levels telling us that ELD.TO has good upside potential. We could expect a rebound rise to at least the Sept downtrend line at the 19.50 level. On the downside, if the Sept downtrend line is not tested, we could see ELD.TO lose strength and decline below its June uptrend line below the 16.50 level. Add to your new position and sell some at the 19.50 level.

**MKT VECTORS JR. GOLD MINERS (GDXJ) 11/29/11 CLOSE= 28.09
US\$**

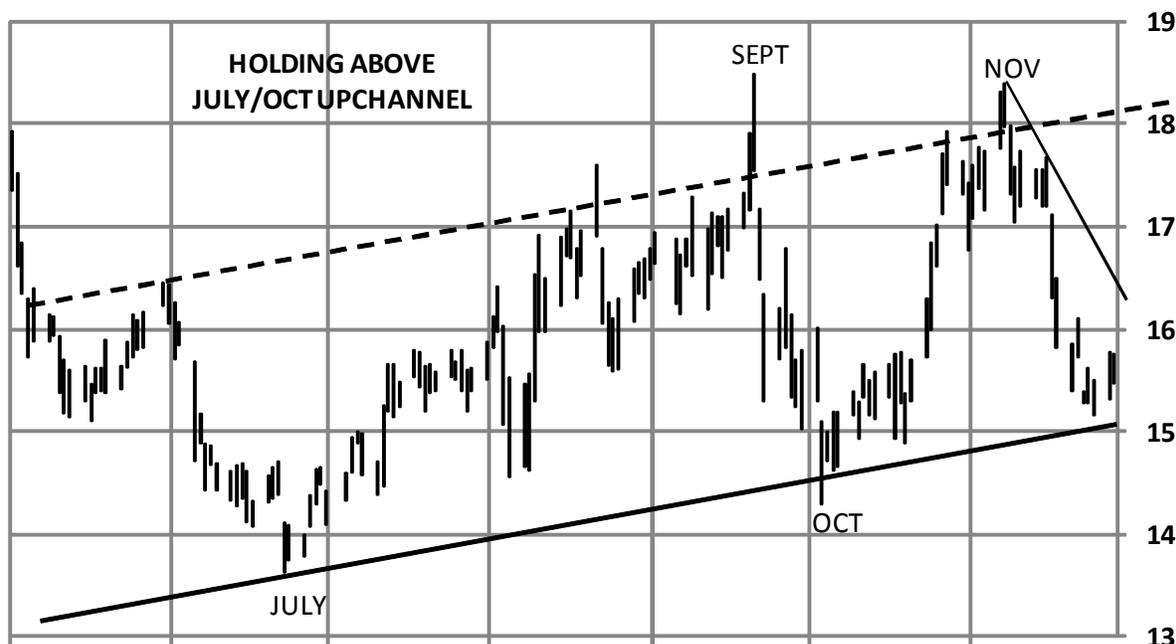

Junior Gold Miners ETF (GDXJ)

New Recom: Gamblers buy a bit at mkt.

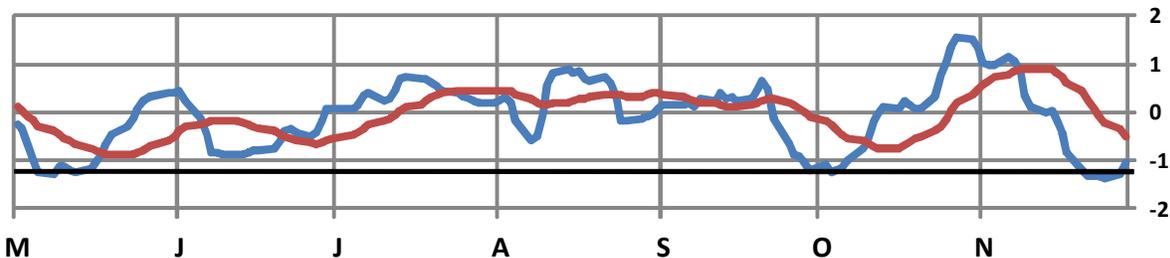

Comment: Declined to an 8wk low where its currently holding. Spinner has bottomed near an oversold area and has started to rise. This tells us that GDXJ could rise to test its Sept downtrend line near the 32 level. A clear break above this level could take it to test its Apr downtrend line near the 38 level. Gamblers buy a bit at mkt and sell half of your position at 32 for a quick gain. Sell the rest if it resists below this level on a 3dc.

GOLD FIELDS Ltd. (GFI) 11/29/11 CLOSE= 15.66 US\$

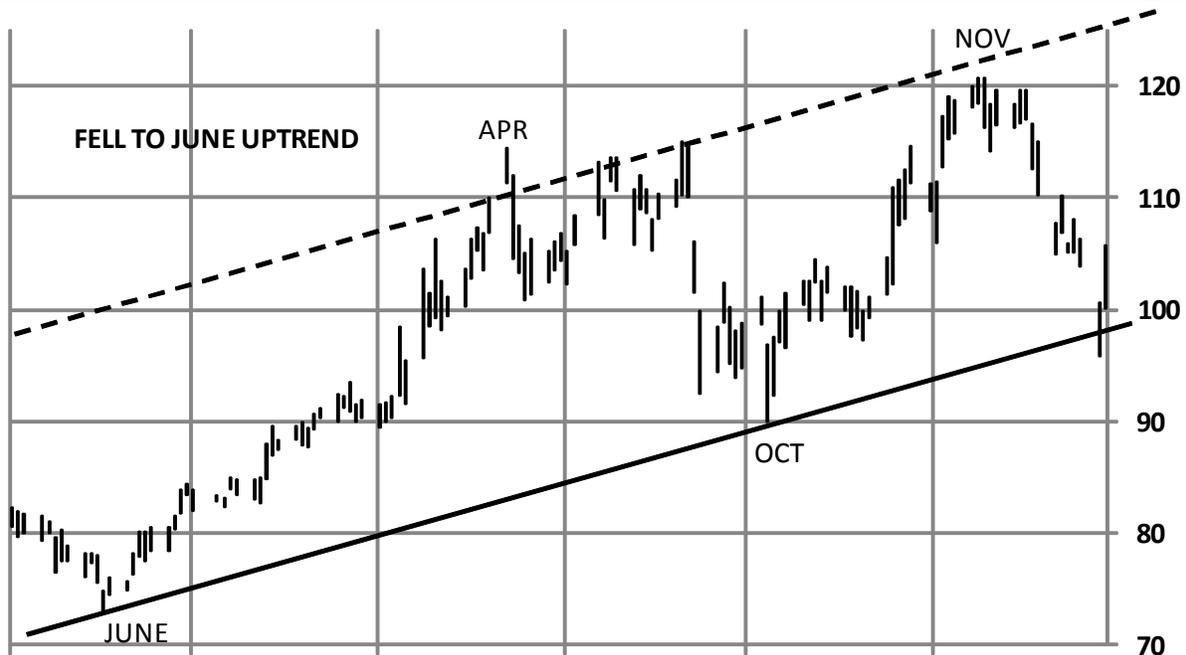

SPINNER (3, 16, 16)

EXTREMELY OVERSOLD!

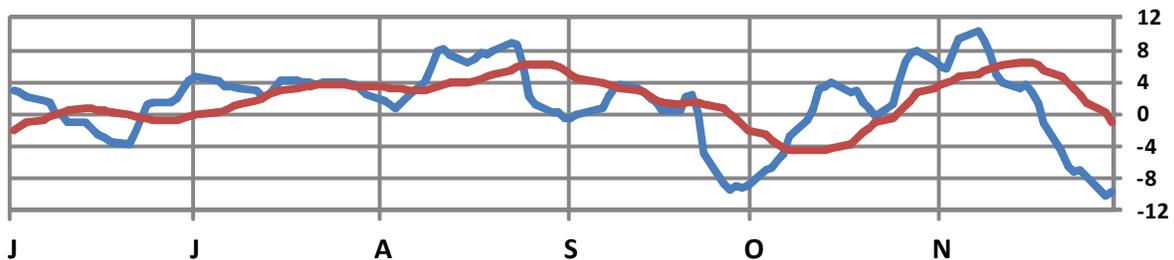

Open Positions	Entry Level	15.40 (Nov-23-11)
	Stops:	ST & MT: 2dc below 14.75
	Profit Targets	17.15 &/or 18.50
New Recom:	Keep your positions. If you did not buy last week, buy at or below 15.50.	
Comment	Looks good! GFI declined a bit more but held above its July uptrend line above the 15 level, showing important underlying strength. Spinner is bottoming at extreme oversold levels, showing us lots of upside potential. Must break above the Nov downtrend line after a 2dc above 16.50 to confirm strength. On the downside, keep an eye on the 15 level as its an important intermediate support. A break below it would show weakness and a decline to the July lows would then be possible.	

RANDGOLD RESOURCES Ltd. (GOLD) 11/29/11 CLOSE= 104.51 US\$

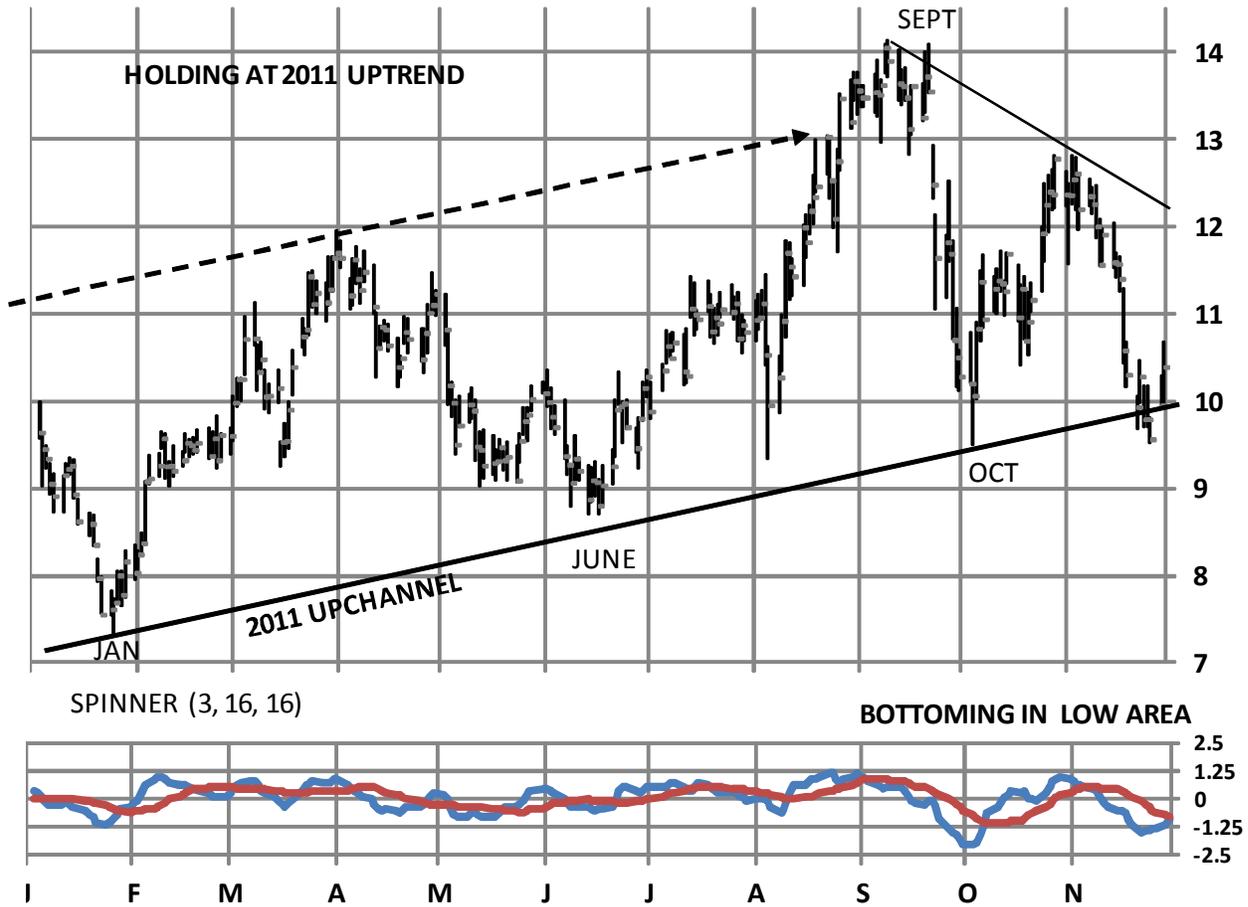

SPINNER (3, 16, 16)

EXTREMELY OVERSOLD!

New Recom:	Buy at mkt!
Comment:	Declined to the mid 90s and jumped back above 100 on stronger than average volume, showing important underlying strength for GOLD. Moreover, Spinner has reached extreme oversold levels and has started to look for a bottom showing us plenty of upside potential. Sell some at each of our profit targets. Place stops after a 2dc below 90. Profit targets are 115 and 125.

NEW GOLD (NGD) 11/29/11 CLOSE= 10.40 US\$

New Gold Inc. (NYSE/AMEX:NGD) Also traded in TSX:NGD

Open trades:	Long:	Entry Level: 11 (Sept-28-11), 10.95 (Oct-17-11), 10.60 (Oct-18-11) and 10 (Nov-23-11).
	Profit Target	12 &/or 13.50.
	Stop:	ST & MT: 2dc below 9.50 (adjusted).

New Recom: If you did not buy last week, its not too late to buy now.

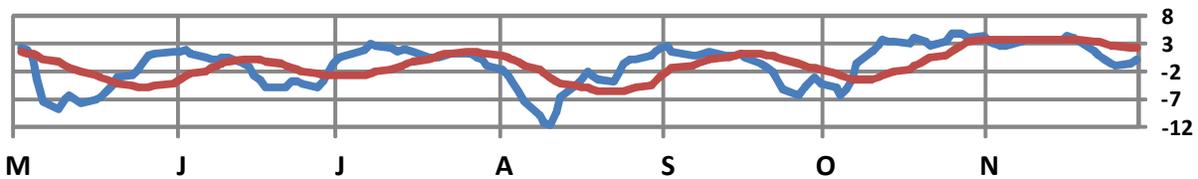

Comment: Despite slip below the 10 level, NGD continues to hold at the 2011 uptrend and looking bullish. Unfortunately, you may have gotten stopped out by a minor 0.04. If you did, get back in below the 10.40 level as NGD is showing good upside potential. Spinner has formed a bottom in an oversold area and its RSI has started to rise since hitting an extreme low last week showing lots of upside potential. On the downside, the Sept downtrend line could be an important resistance level, so look to sell half at the 12 level and keep the rest in case of a breakout.

FUTURES

LIGHT CRUDE OIL JAN 2012 (CLF12) 11/29/11 CLOSE= 99.79

SPINNER (3, 16, 16)

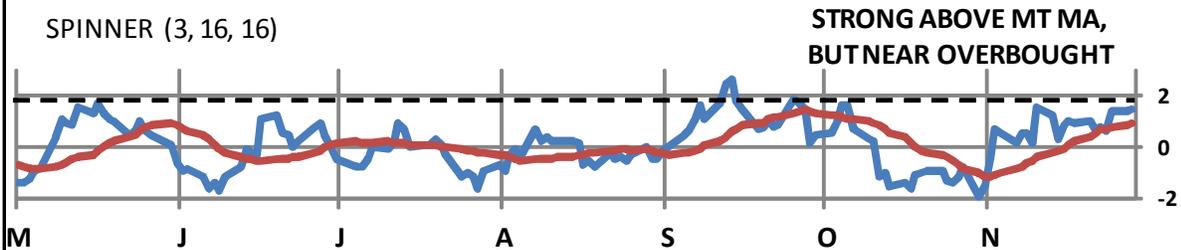

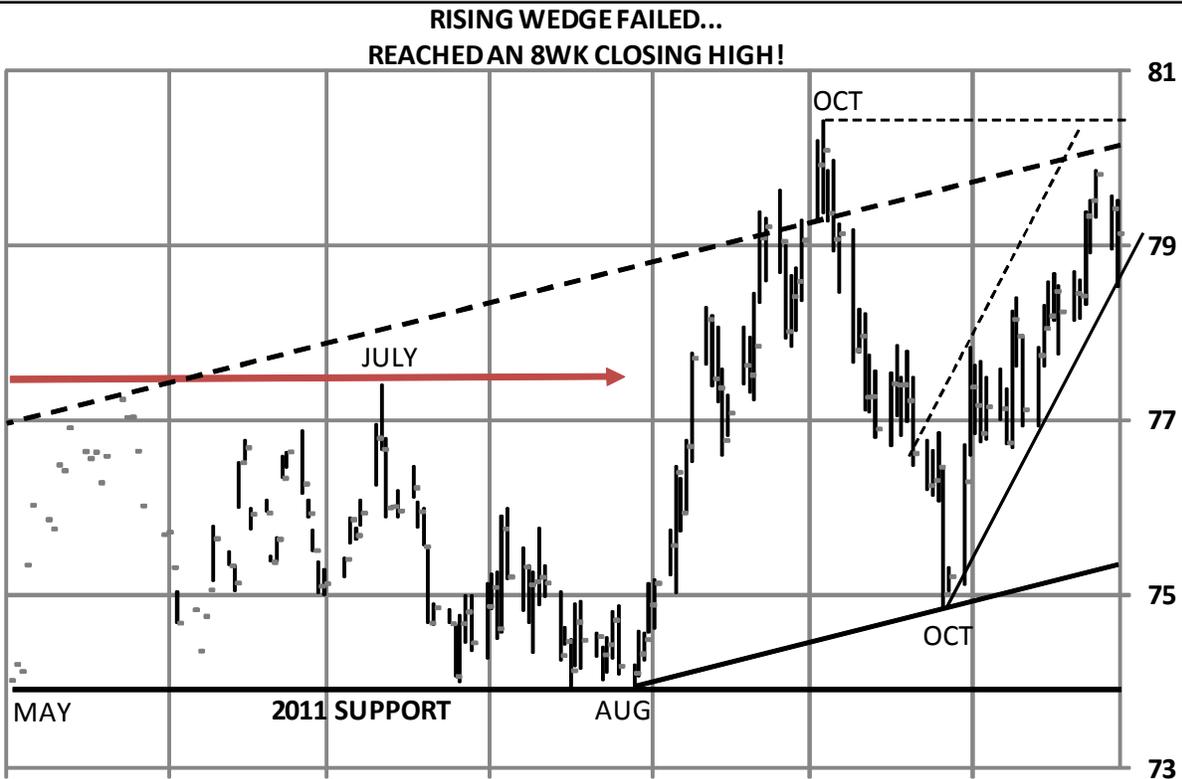

New Recom:	Buy after a decline below the 92 level that holds above 89.50.
Comment:	Crude continues to resist below the July highs showing some weakness as its been unable to clearly break above this level. Spinner neutral but other indicators showing crude closer to an overbought level. Keep an eye on the July highs; if crude continues to resist below these highs, we'll likely see it decline to the low 90s. However, on the upside, Crude is holding firmly above its 5wk MA and forming an ascending triangle with the July high resistance. A break above the resistance would show important bullish action for crude. Volume has been higher than average as investors continue to buy on the dips, showing upward pressure. Stay out for now and wait for weakness or reconfirmed strength to buy again.

S&P 500 INDEX DEC 2011 (SPZ11) 11/29/11 CLOSE= 1196.5

Open trades:	Long at:	Entry Level: 1210 (Aug-11-11) and 1170 (Sept-21-11).
	Stop at:	M/T: 2dc below 1100
	Profit targets:	1280 &/or 1330
New Recom:	Keep your position. Sell more at 1280.	
Comment:	Higher lows for S&P 500. It found support at the 1150 level after the decline. If the 1150 support holds, we'll likely see S&P 500 rise to test its July downtrend line once again. A break above this downtrend line would show strength that could take it to test the old highs. Spinner is bottoming at an oversold area and has started to rise. If Spinner breaks above its MT MA it'll be a bullish sign for the S&P. On the downside, a clear break below the 1150 level would confirm weakness and a decline to the Oct lows would then be likely. Keep an eye on both the ST support and resistance levels as a break in either direction will tell the story.	

U.S. DOLLAR INDEX DEC 2011 (DXZ11) 11/29/11 CLOSE= 79.151

Open Trades	Long at:	76 (Sept-7-11), 77 (Sept-13-11) and 77.50 (Sept-14-11). Sold half at 79 for a profit! :)
	Stop:	M/T: Sell after a 2dc below 75.
	Profit Target	80 (almost reached!) & 82.
New Recom:	Sell the rest at 79 or higher. Sell all at 79.90 or higher.	
Comment:	Dollar continues to rise with strength within the Oct upchannel. Nonetheless, the dollar has risen far and fast and some consolidation time is due. Moreover, the Oct high continues to be strong resistance as confirmed by volume activity. Volume rose to above average levels on the declines since the dollar was unable to break above the 80 level resistance. Spinner is near overbought levels telling us that there is more downside risk than upside potential at this moment. Wait for weakness to buy new positions.

Note: U should NOT feel our recommended prices are set in concrete. If mkts suddenly feel hot or cold to U, or dramatic news occurs, U can buy or sell, or stop at slightly higher or slightly lower prices. It also hinges on your experience level. Some people can use our prices as guides & know when they can take bigger risks.

Spinner: Spinner is an in-house momentum indicator (not always shown on charts). Momentum indicators use the rate of change in price to determine predominant energy flows. Spinner trading signals are generated when the faster timing line crosses above or below the slower confirming line. Upside crosses in the lower range of positive territory offer the most reliable signals for longs; downside crosses in the top range of negative territory for shorts. Avoid trading against the timing line, ie, buying/selling if the timing line is in corrective mode (against direction of trade) unless the confirming line is positioning for a new 'confirming cycle'. It's important to always be aware of location, direction & cycling phase of the confirming line. Spinner signals are more effective in trending mkt's than in trading ranges where indicators such as Stochastics & Williams %R should be used.
