Gold Charts R Us

●●●● GCRU #473 on December 7th, 2011 (in its 10th year)

POLITICAL EVENTS CONTINUE TO MOVE MARKETS

Will the Eurozone find its way out of the debt crisis?

The S&P ratings service is putting pressure on this week's European Union summit by warning of **possible downgrades for 15 Eurozone countries**. The markets, meanwhile, are anticipating the next move as gold and silver remain quietly strong.

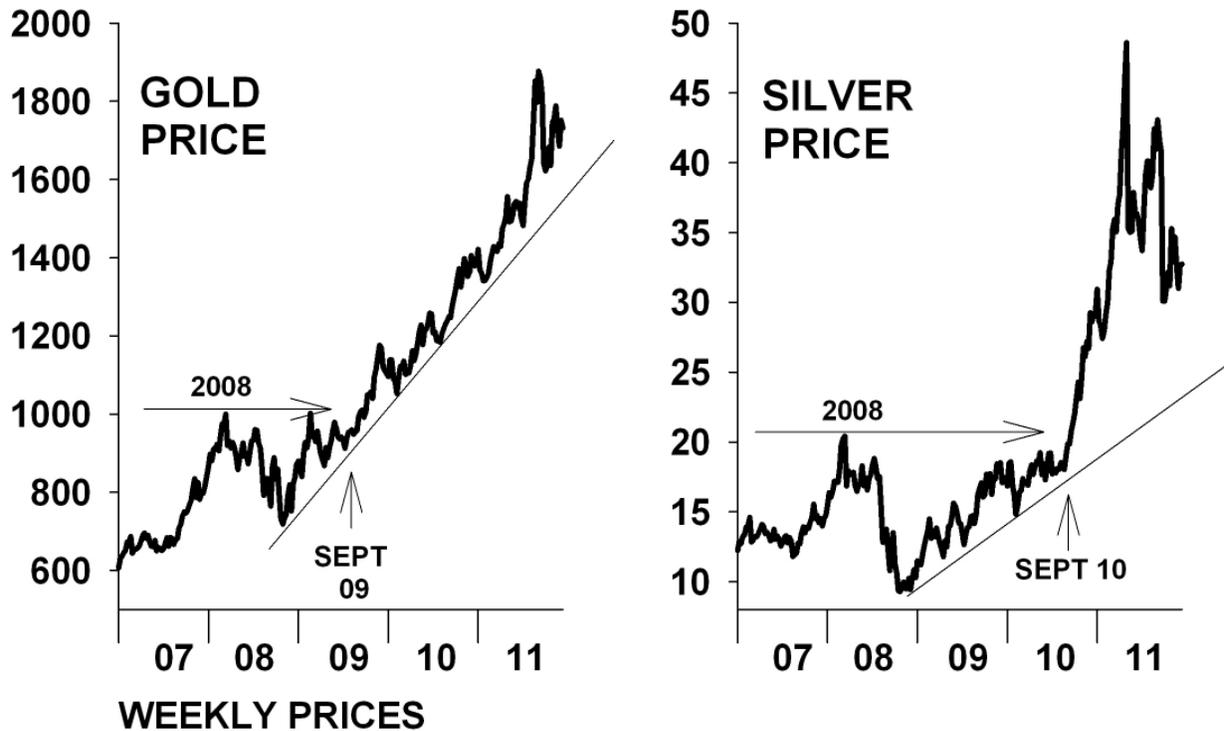

If this week's summit ends with some concrete plan for the future, the S&P could decide to leave the 15 euro nation's credit rating as is. Gold could then rise if the market perceives more central bank stimulus will be needed to help the economy.

In the end, gold's firmness since reaching its late September low reflects the times. Whether investors are buying for wealth preservation, or whether its fear based buying, the fact that gold has not fallen more than 16% since reaching its record highs in early September clearly shows that buying on any weakness has been happening.

The chart below shows gold and silvers' strength since the financial meltdown in 2008.

HOLDING STRONG

Note the way gold surged ahead once it clearly broke above \$1,000 in September 2009. The gold price gained 170% from its Nov 08 lows to its Sept 11 highs! An impressive rise, especially when considering the worst decline since then was the 16% decline last September.

When some people argue that gold should be rising much more under the current environment, we look at it the other way.....the fact that it's not falling shows great strength.

Very few imagined gold near \$2,000 this year, yet it became a reality.

Silver is similar. It took off a year after gold did in Sept 2010, see chart. This also resulted in disbelief when silver surged above \$20, more than doubling in price just seven months later in April. The decline since then, while volatile, has been orderly. This chart is saying that in a worst case decline, silver could test \$27 and it would still be in a strong uptrend since 2008.

Accumulate during weakness. That's the key, and that is where our guidelines will help you to get in and out at the best price and areas possible....

CHART TALK

Consolidation triangles are everywhere! Gold, silver, gold and silver shares, the stock market... you name it, and you'll see triangles forming in most markets.

Triangles are reflecting two things, an important proven support and an important proven resistance.

The stock market, gold and silver have been moving sideways within the triangle.

While they're rising, they're not breaking above important resistance levels, and when they dip or decline, they've held above the consolidated support levels.

This past week, investors started buying anything and everything that moves. Gold shares and the stock market were oversold, as we've been pointing out over the past 2 or 3 weeks. We were able to lock in good positions and have taken profits on some of them already by taking advantage of the volatility.

This volatility is telling us that the markets are anxious. Black Friday was a big hit, Christmas is around the corner, everyone is jolly and in need of positive news. They are craving it and will react feverishly to any hint of it.

On the other hand, deep down people know that despite positive consumer and economic data, the situation is not sustainable. They know that even though things may sound good, they really aren't. They might not understand the mechanics of it all, but they have a feeling...

We can see this through the various consolidation (symmetrical) triangles in the different sectors.

Since the Oct lows, we've seen **higher lows in the stock market, gold shares, gold and silver** as they've been creeping upward, forming a solid base that is now over 2 months old. On the other hand, there is strong resistance coming from the Sept highs. Everything is moving within these two levels thereby creating triangles.

The range between the resistance and support levels within these triangles are narrowing. Something's got to give. What will it be?

HUI has been rising steadily since the Oct lows, with higher lows. As of this moment, HUI is looking to test the 600 level once again. This time, Spinner is

above its MT MA with room to rise further, RSI is in the low 40s showing good upside potential. Our in house Adv/Dec Line is forming a base above the June uptrend line and its Spinner recently reached extreme oversold levels and has started to rise breaking above its MT MA. This is bullish action.

All of these are important signs of strength showing gold shares are poised to test the Sept highs once again.

Gold has also been moving within a consolidation triangle as well. It's been rising since the Sept lows but found important resistance below \$1800 forming a clear downtrend that it's been unable to break, currently at the \$1750 level.

Despite this sign of weakness, since the low in Sept, everytime gold has slipped to the bottom side of the Sept upchannel or below \$1700 it has jumped back up, showing that there is still lots of demand for gold. The uptrend is currently at the \$1680 level.

The gap is narrowing and whichever way it breaks will clearly show us gold's next move.

It's very likely that gold will likely continue consolidating and moving sideways for awhile longer. Remember, gold has outperformed everything else this year and more consolidation time would be normal.

In the chart above you'll also see the HUI at a low area versus gold in our gold/HUI ratio. **The ratio shows HUI has been forming a base for some time now and has started to rise, currently testing**

the downtrend.

On the *top chart on page 5*, when seeing gold and HUI indexed to 100, true relative strength, you can see they moved similarly until last May.

Gold then continued rising while gold shares didn't keep up with the stronger gold price. Gold began rising on safe haven demand while stock market weakness put some pressure on the gold shares in general.

Gold has outperformed gold shares, but it now looks like gold shares will catch up (*see page 5*). Note the ratio of the two is bottoming and poised to rise which means gold shares may be getting ready to outperform gold.

Gold shares will ultimately benefit because gold at current prices continues to bring lots of revenue to mining companies, making them a profitable business.

Silver and silver shares also continue forming triangles as they have formed a base at the Sept and Oct lows, respectively, and have risen since. Nonetheless, both silver and silver shares have been under pressure since the April highs and until this level is clearly broken, we'll continue seeing overall weakness.

The S&P 500 has risen to test its July downtrend once again but it's resisting below it. If S&P can break above this level, we'll see a confirmed reversal in trend and a rise to test old highs. Otherwise, S&P500 **may fall back to its Oct uptrend**, at the 1170 level. As long as the S&P 500 can hold above the 1170 level, we'll see strength behind the move.

Crude oil is also at an important juncture where it's been resisting for a couple of weeks below the July highs at the 102 level. Crude has been rising with strength since October. If Crude can't break above its resistance, it'll likely fall back to its next support, the 90 level.

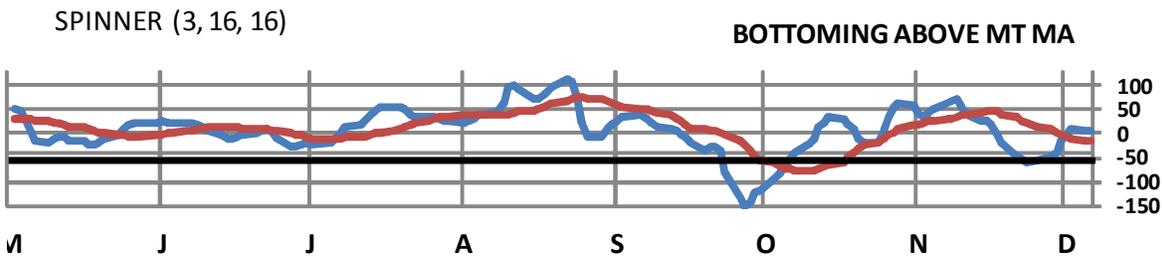

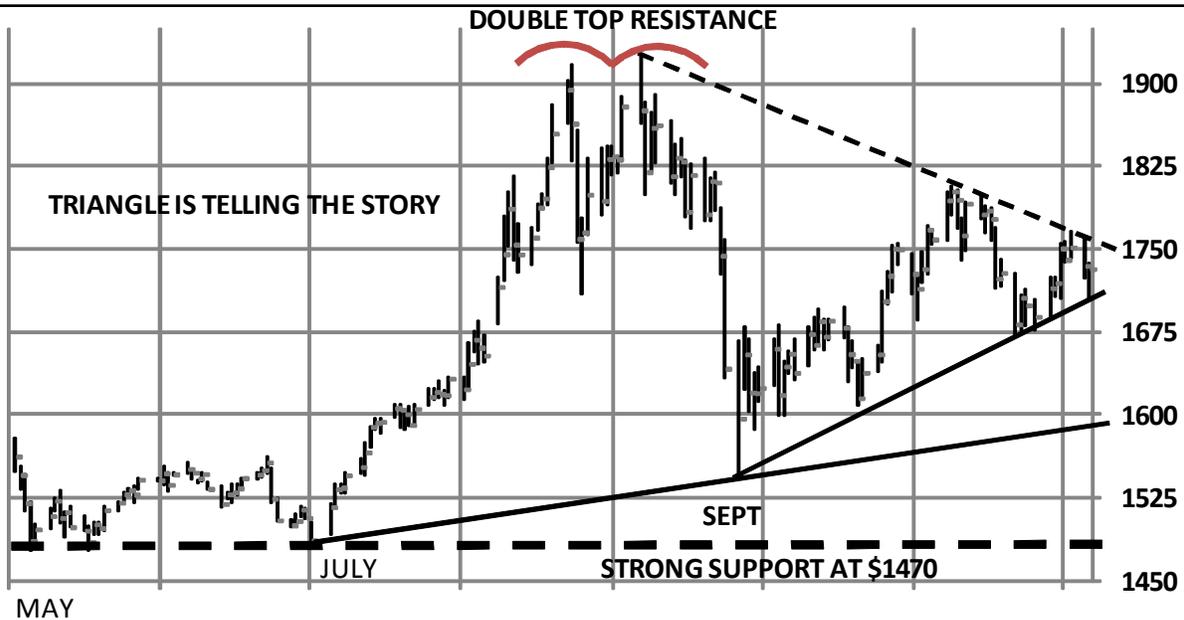

So, what does this tell us?

- 1) Keep your gold and silver. Buy more on the dips as per our recommendations on pages 7 and 8.
- 2) Keep your gold shares. Look to sell at the profit targets.

GOLD, SILVER & INDICES

GOLD FEB 2012 (GCG12) 12/6/11 CLOSE = 1731.8

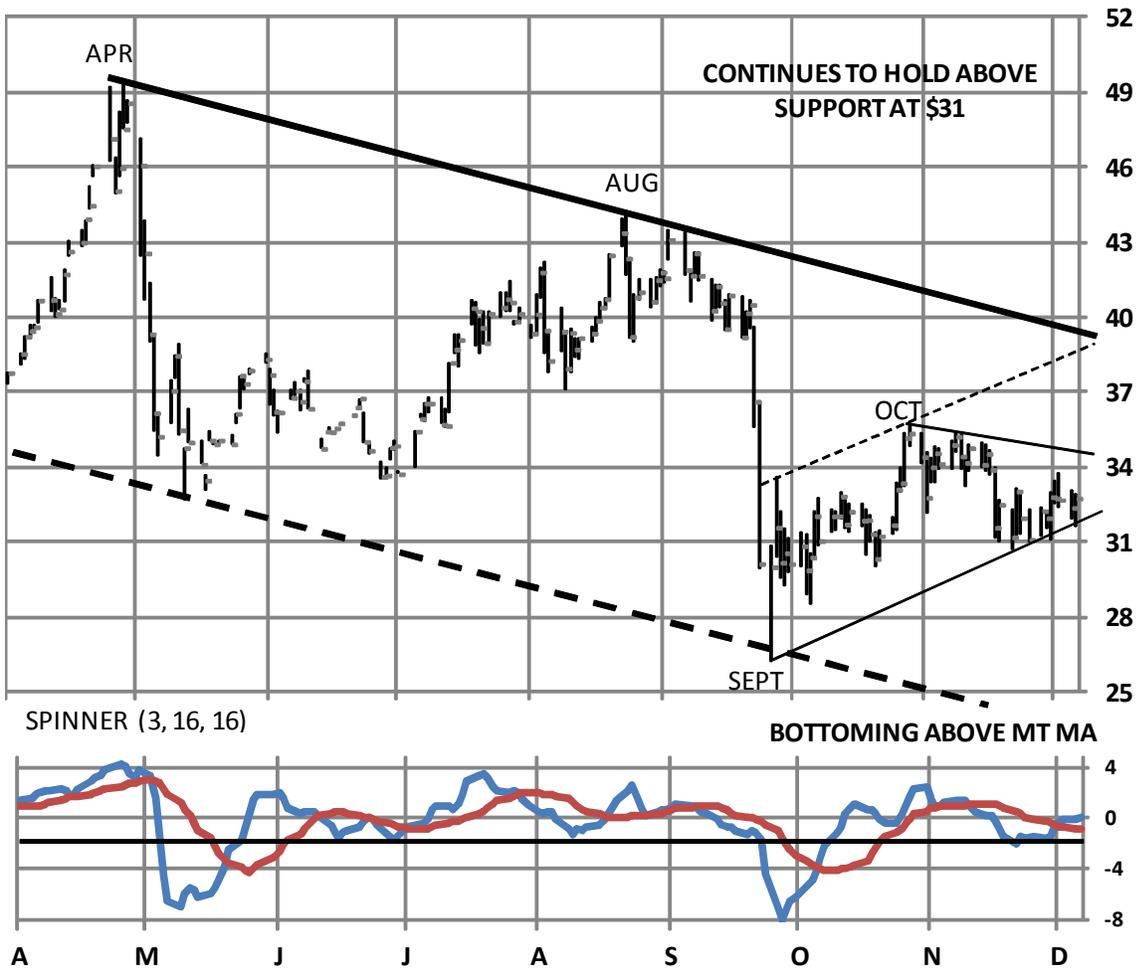

Open trades:	Long at:	Entry level: 1640 (Oct-18-11), 1710 (Oct-26-11), 1750 (Nov-10-11), 1725 (Nov-17-11).
	Stop:	All: 2dc below 1594.
	Profit targets:	1920, 2000 &/or 2200

New Recom: **Keep your positions. Buy more below the 1650 level.**

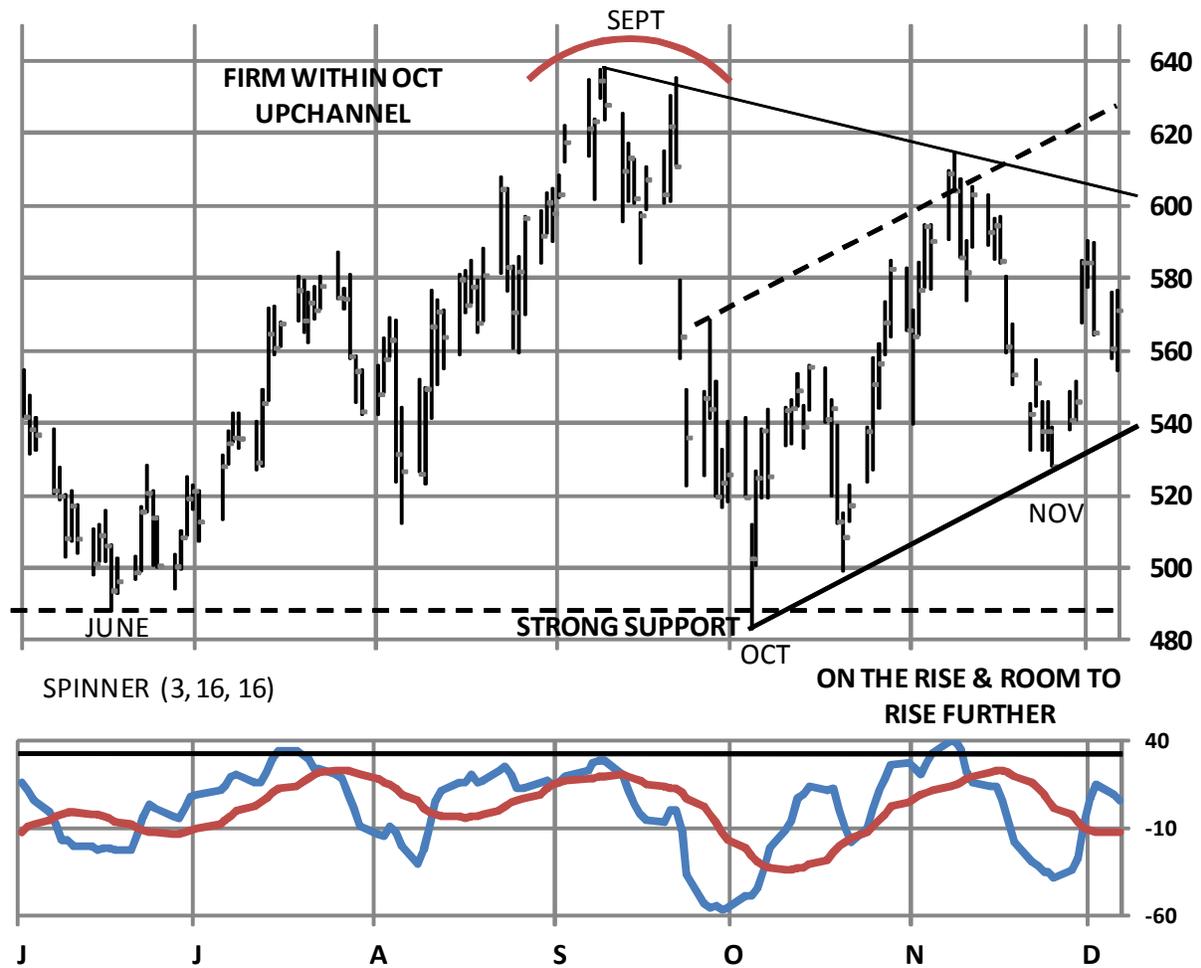

Comment: Gold continues to form a symmetrical triangle. It's double top resistance continues to put downward pressure while the Sept uptrend continues to gain momentum. If gold breaks below its Sept uptrend, below 1680, on a 2dc we'll likely see it dip to test its July uptrend near the 1600 level. Conversely, if it breaks above the Sept downtrend line, above 1750, on a 2dc gold could test its next resistance at the 1800 level. Spinner is on the rise from near oversold levels, breaking above its MT MA with lots of room to rise further. On the other hand, if it breaks below its MT MA, we'll likely see weakness. Keep your gold position and look to buy more on dips and declines.

SILVER MAR 2012 (SIH12) 12/6/11 CLOSE= 32.744

Open trades:	Long at:	Entry Level: 29.65 (Sept-28-11), 29 (Oct-4-11) and 29.95 (Oct-20-11) and 31 (Nov-25-11).
	Stop:	ST & MT: 2dc below 29.90.
	Profit targets:	35, 38 &/or 40.
New Recom:	Keep your position. Buy at the 31 level or lower. Sell a third of your position at the 35 level.	
Comment:	Silver continues to hold strongly above its Sept uptrend above 31, but it's also resisting below its 75 day MA at 35, as it also forms a triangle. A break in either direction will show silver's tendency for the next move. If it breaks above its 75 day MA on a 2dc, it could rise to test its next resistance, the Apr downtrend near 39. On the downside, a 2dc break below 31 could take silver to its next support at the 27 level. Spinner has started to rise, breaking above its MT MA, but not showing clear signs of strength. Keep your position for now, silver looks good, and let's wait to see what direction silver takes.	

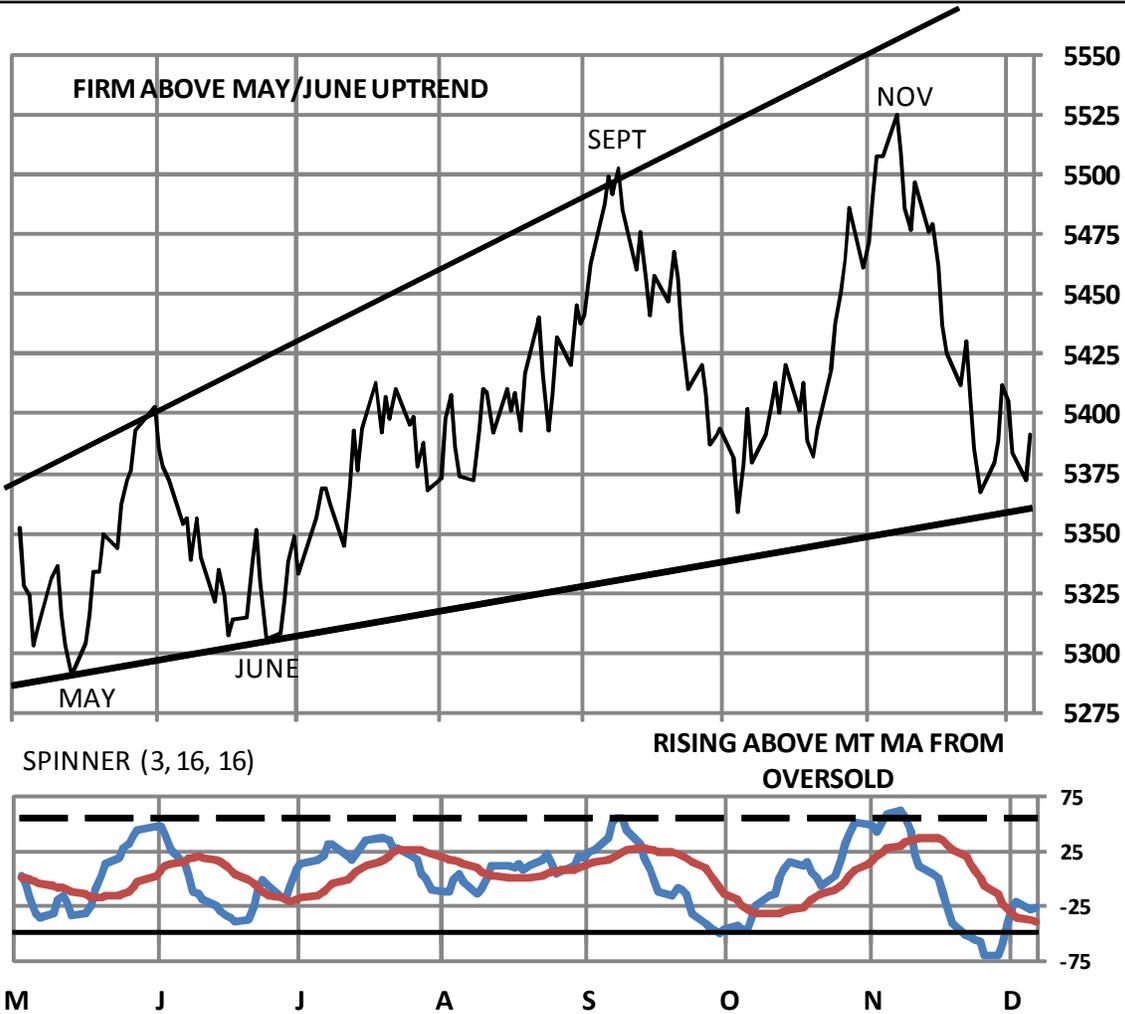

HUI GOLD BUGS INDEX (HUI) 12/6/11 CLOSE= 571.55

Comment:

HUI continues to rise within its Oct upchannel, showing consistent higher lows. Moreover, the Sept downtrend is still an important resistance and HUI must break above it to show strength that could test the Sept highs. Spinner has been rising feverishly, breaking above its MT MA with room to rise further, telling us that it has the strength to test the Sept downtrend near the 600 level. On the downside, watch the Oct uptrend line, a break below it on a 2dc would show weakness and a decline to its major support near the 490 level would then be likely. Keep your gold share positions but look to sell at profit targets as the rise may be nearing maturity.

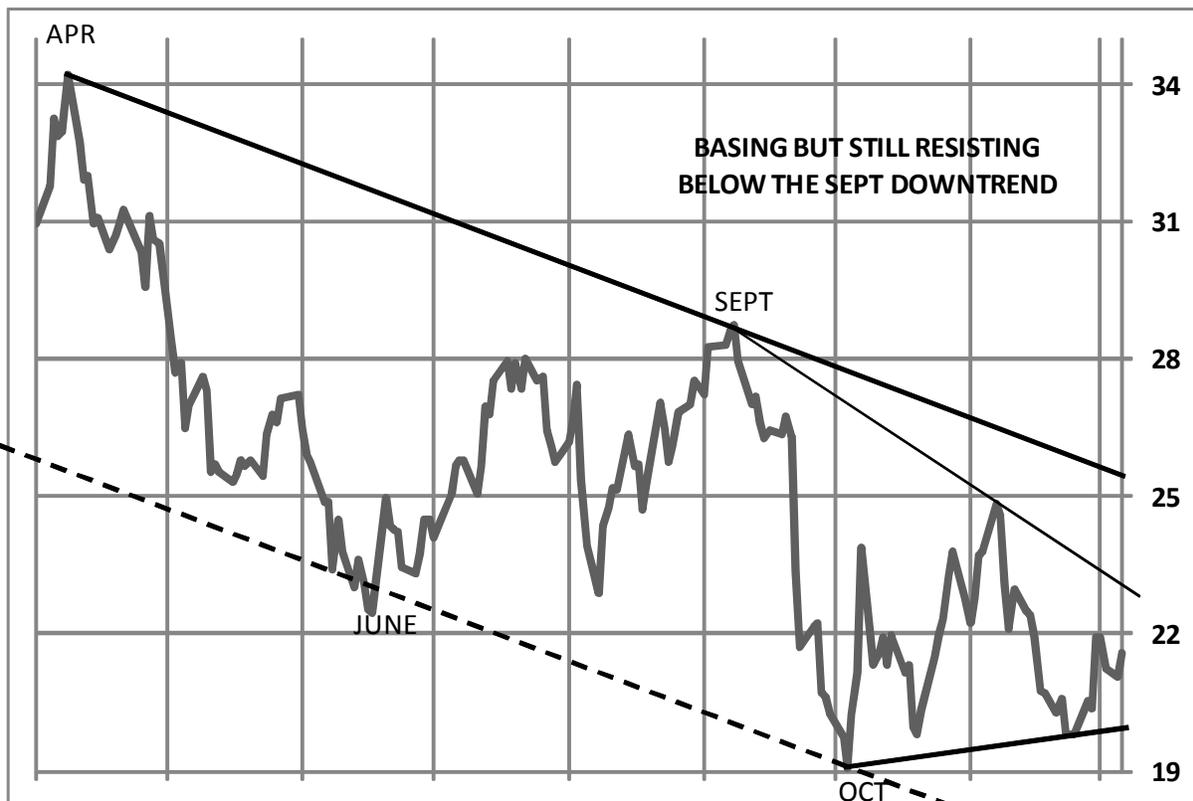

ADEN GOLD STOCKS ADV/DEC LINE 12/6/11 CLOSE=5391

Comment:

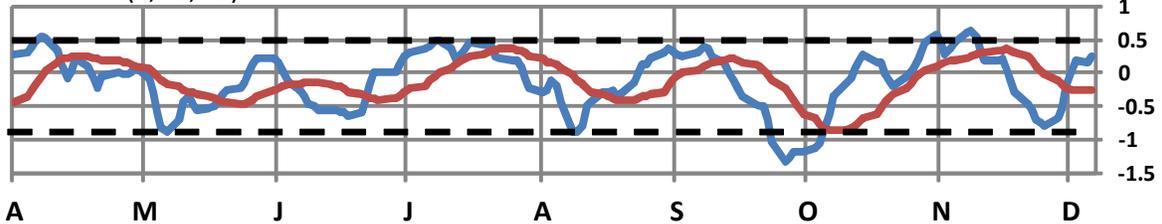

Our in house Adv/Dec Line continues to hold above its June uptrend, showing underlying strength for gold shares. Moreover, Spinner's still within an oversold area with plenty of room to rise. If the Adv/Dec Line can hold above its uptrend and resume its rise, we'll likely see gold shares rise to test their highs. On the downside, if the uptrend is broken, we'll see weakness in gold shares and a decline to test their support levels would then be possible.

ADEN SILVER SHARE INDEX (ASSI) 12/6/11 CLOSE= 21.594

SPINNER (3, 16, 16)

FIRM ABOVE MT MA...

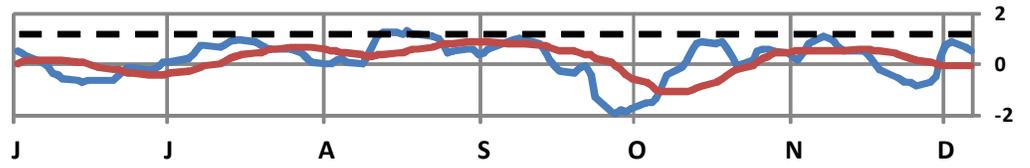

Comment:

ASSI continues to resist below the Sept downtrend near the 23 level. Spinner rose from an oversold area with strength, breaking above its MT MA and fast approaching overbought levels. Spinner action is confirming strong resistance below the Sept downtrend. This tells us downside risk is higher than upside potential at this moment. However, ASSI continues to hold above its Oct uptrend where it has formed a base. If ASSI can break above Sept downtrend, we'll see a first sign of strength and it could then rise to test the Apr downtrend near the 26 level. Stay out of silver shares for now and wait for strength to buy.

STOCKS

YAMANA GOLD (AU) 12/6/11 CLOSE= 16.37 US\$

SOLID 2 MO UPCHANNEL WELL UNDERWAY!

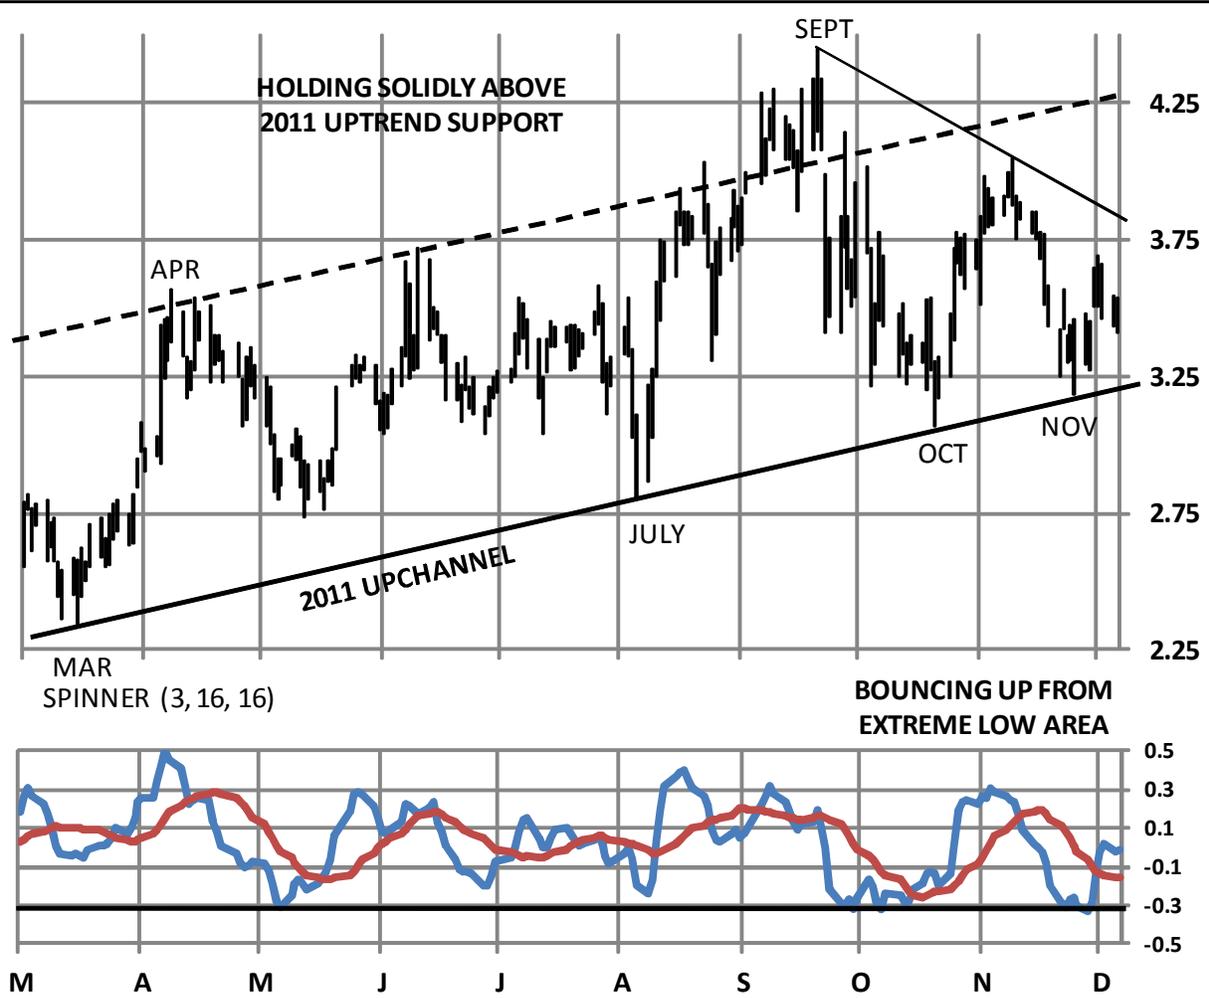

Yamana Gold (NYSE:AU); gold: US\$ Also trade TSX:YRI

Open trades:	Long at:	Entry Level: 16.50 (Sept-21-11), 13.90 (Sept-28-11) and 13.40 (Oct-3-11). Sold all at 16.50 for an average gain of 13% gain!
	Stop:	S/T & M/T: 2dc below 12.80.
	Profit Target:	16.50 (reached!) &/or 20.

New Recom: You're out. Looking to buy back in.

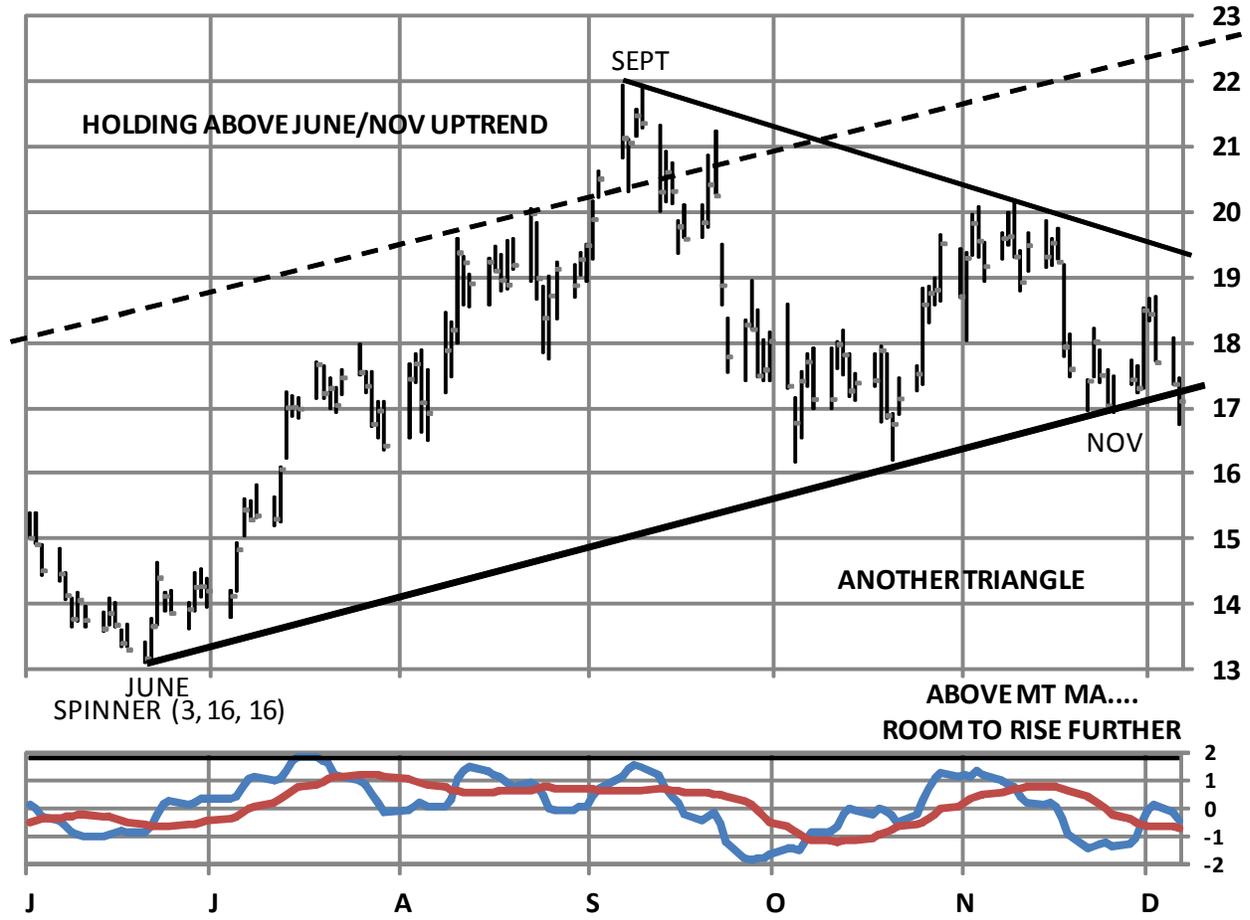

Comment: Has been a great ride with AU. With overbought levels now quickly being reached, it tells us that the Sept high resistance is strong and some weakness is likely before AU breaks above it. We'll be looking to buy again on weakness.

B2GOLD CORP. (BTO.TO) 12/6/11 CLOSE= 3.520 CAD\$

Open Positions	Entry Level	3.40 (Nov-23-11)
	Stops	All 2dc below 3.20
	Profit Targets	3.75 (adjusted) &/or 4.05 (adjusted)
New Recom:	Keep your position. Sell half at our next profit target. Sell the rest at our second profit target.	
Comment:	Looks good! BTO.TO continues to bottom above its 2011 uptrend line. Spinner bouncing up from extreme oversold and above its MT MA. Other indicators showing BTO.TO at a bottom with plenty of upside potential. On the downside, BTO.TO could continue resisting below the Sept downtrend. If BTO.TO is unable to break above it, it could fall back to its 2011 support. Keep your positions; sell at profit targets.	

ELDORADO GOLD (ELD.TO) 12/6/11 CLOSE= 17.13 CAD\$

Eldorado Gold (TSX:ELD) Also traded in NYSE:EGO, ASX:EAU

Open trades:	Long at:	Entry Level: 19.25 (Aug-31-11), 18 (Sept-28-11), 17.30 (Oct-3-11) 17.50 (Nov-23-11) and 17.30 (Nov-30-11).
	Profit Target	19.50 &/or 21
	Stop:	ST & MT: 2dc below 16.50.

New Recom: Keep your position.

Comment: ELD.TO slipped below the June/Nov upchannel but held above 17 on a closing basis, showing strength. Spinner above MT MA with plenty of room to rise further. Other indicators also showing ELD.TO at a bottom and poised to continue rising. Must break above its Sept downtrend line resistance to show renewed strength that could take ELD.TO to test its old highs. Keep your positions and sell at our profit targets.

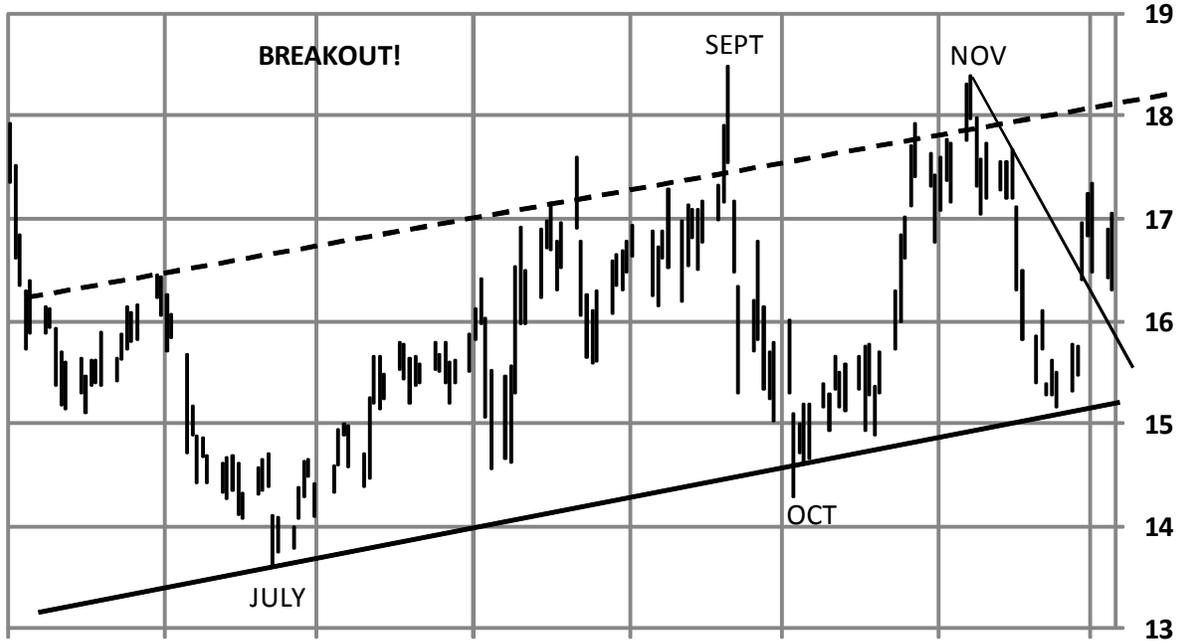

MKT VECTORS JR. GOLD MINERS (GDXJ) 12/6/11 CLOSE= 30.07 US\$

Junior Gold Miners ETF (GDXJ)

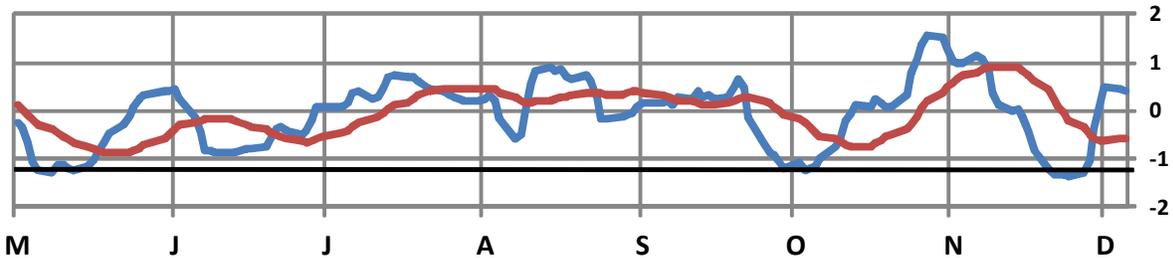

Open trades:	Long at:	Gamblers bought at 29.40 (Nov-30-11)
	Stop:	ST & MT: 2dc below 26.65
	Profit targets:	32 &/or 35
New Recom:	Keep your position.	
Comment:	Continues to resist below its 75 day MA (32) while rising within the Oct upchannel creating a symmetrical triangle. Spinner rose from oversold and broke above its MT MA with room to rise further, showing underlying strength. If GDXJ can break above its Sept downtrend after a 2dc, it could rise to its next resistance level, the Apr downtrend line. On the downside, the Oct lows are important support. A break below this level would confirm weakness and its downtrend.	

GOLD FIELDS Ltd. (GFI) 12/6/11 CLOSE= 16.97 US\$

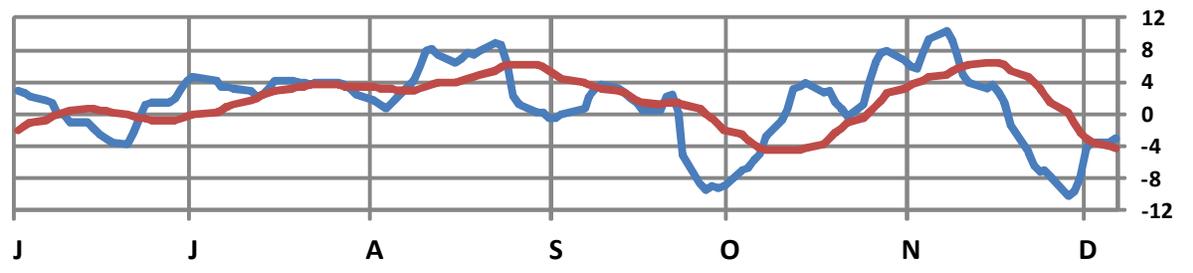

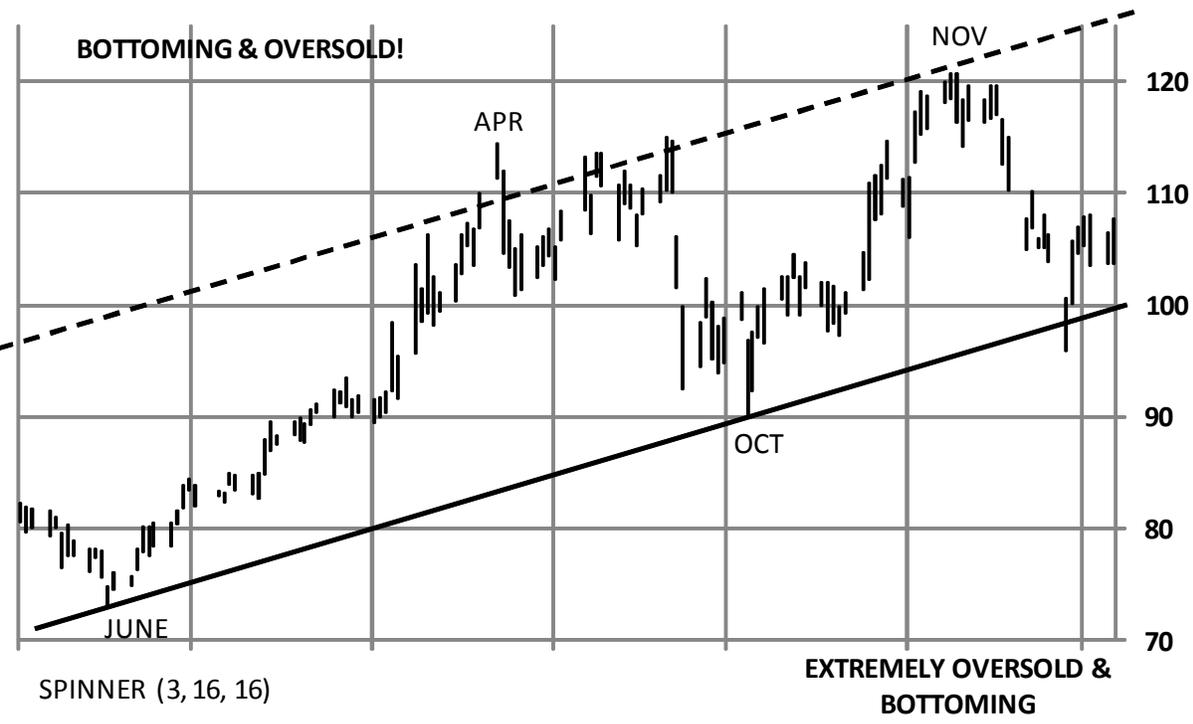

SPINNER (3, 16, 16)

BOUNCING UP ABOVE MT MA

Open Positions	Entry Level	15.40 (Nov-23-11). Sold half at 17.15 for a 11% gain!
	Stops:	ST & MT: 2dc below 14.75
	Profit Targets	17.15 (reached!) &/or 17.65 (adjusted).
New Recom:	Sell second half of position at 17.65.	
Comment	GFI broke above the Nov downtrend line, reaching our first profit target. Volume has been strong on the rises while GFI's RSI is still in the high 40s. Spinner rose with strength from extreme oversold, breaking above its MT MA and with room to rise further. Other indicators show GFI has good upside potential. On the downside, watch the July uptrend line near the 15 level. A clear break below it would show weakness. Keep your position for now.	

RANDGOLD RESOURCES Ltd. (GOLD) 12/6/11 CLOSE= 106.38 US\$

Open Positions	Entry Level	105.5 (Nov-30-11)
	Stop	ST & MT: 2dc below 96.
	Profit Target	115 &/or 120
New Recom	Keep your position. Sell half at each profit target.	
Comment:	Bouncing up from June uptrend at extreme oversold levels. Looks good! Spinner rising from extreme oversold and is breaking above its MT MA, showing renewed strength at hand. On the downside, the 100 level is becoming important intermediate support. A break below this level would show weakness and a decline to its next support at the 90 level would then be likely. Keep your positions, sell at our profit targets.	

NEW GOLD (NGD) 12/6/11 CLOSE= 10.650 US\$

New Gold Inc. (NYSE/AMEX:NGD) Also traded in TSX:NGD

Open trades:	Long:	Entry Level: 11 (Sept-28-11), 10.95 (Oct-17-11), 10.60 (Oct-18-11), 10 (Nov-23-11). Some may have bought at 10.85 (Nov-30-11).
	Profit Target	12 &/or 13 (adjusted).
	Stop:	ST & MT: 2dc below 9.50.
New Recom:	Sell half at the 12 level. Sell the rest at 13.	
Comment:	Continues to look strong as it consolidates near the bottom side of the 2011 upchannel. Spinner above MT MA with room to rise further. RSI still at the 40 level with room to rise further. Indicators tell us that NGD is poised to rise once again to test the Oct/Nov highs at the mid 12 level. On the downside, the Sept downtrend is putting downward pressure on NGD. Look to sell half of your position when NGD reaches the 12 level.	

FUTURES

LIGHT CRUDE OIL JAN 2012 (CLF12) 12/6/11 CLOSE= 101.28

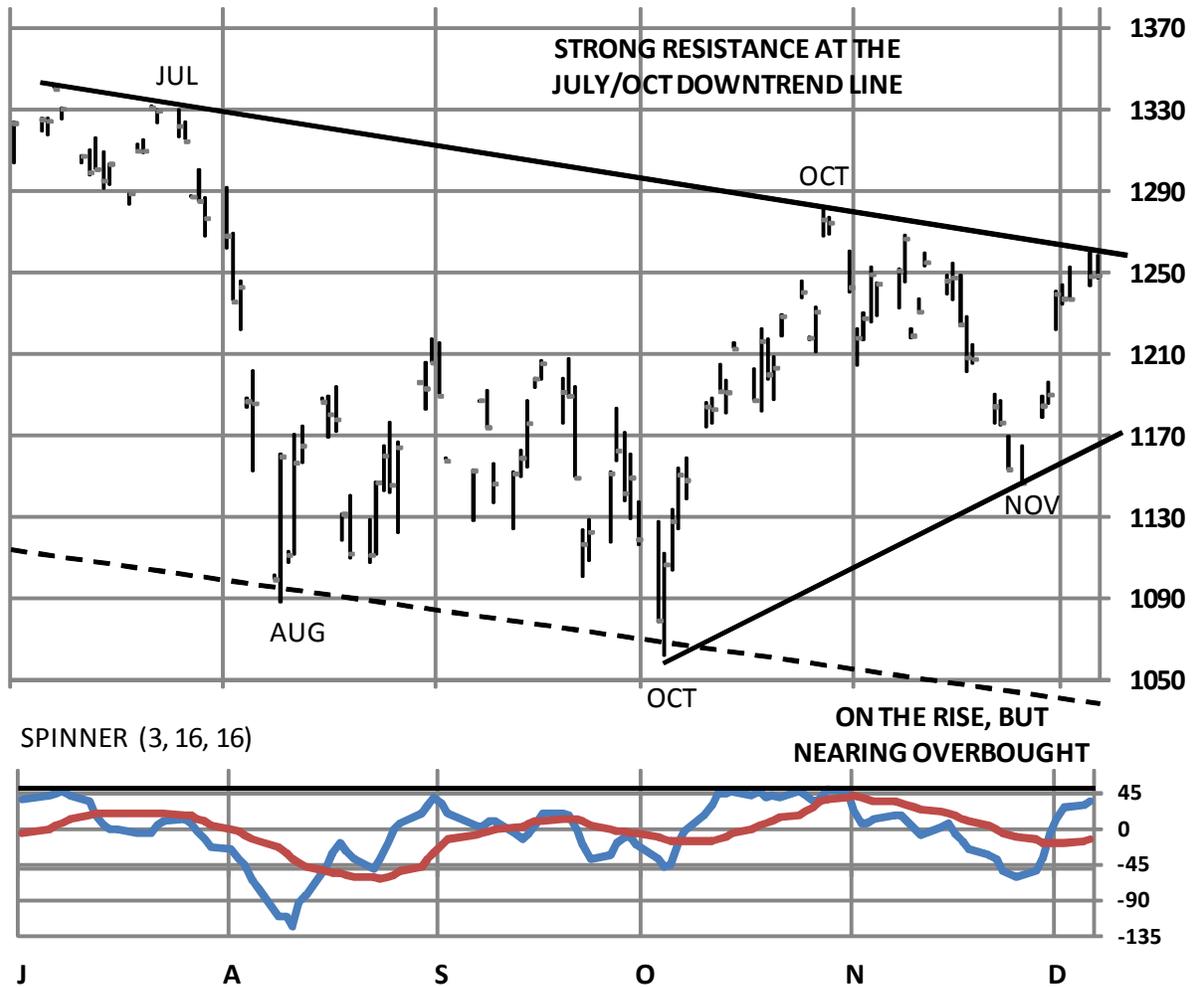

New Recom:

Buy after a decline below the 92 level that holds above 89.50.

Comment:

Crude has formed an ascending triangle as it resists below the July highs near 102. A break above this resistance would show strength and a rally to the May highs would then be likely. However, if oil continues to resist below the July highs, it'll be poised to break below its Oct uptrend and decline to the low 90s. Keep an eye on the Oct uptrend as a break below it would show weakness. Spinner within an overbought area and losing steam. Stay out of crude for now but be ready to buy on weakness... if it declines and holds above the high 80s and low 90s.

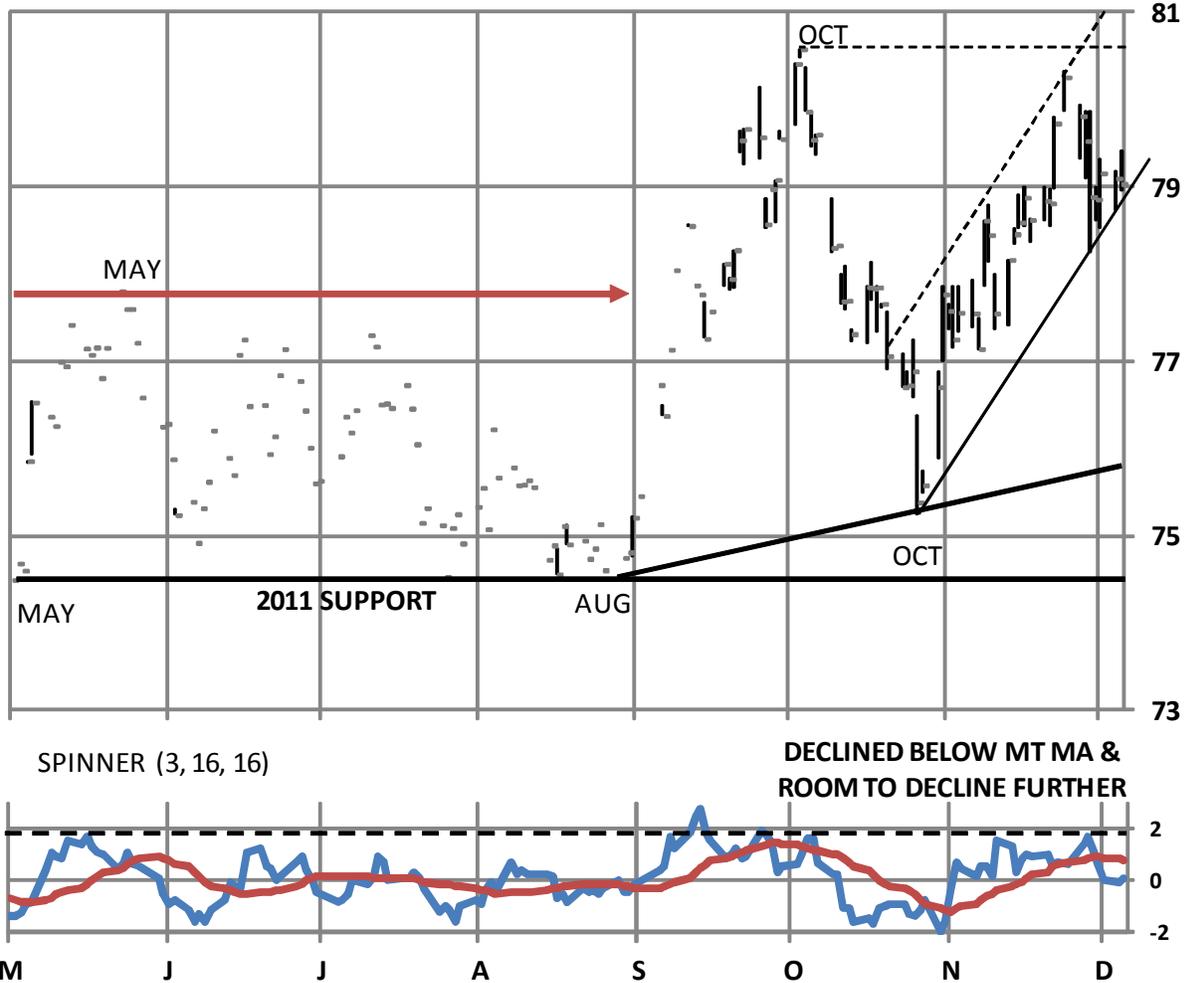

S&P 500 INDEX MAR 2012 (SPH12) 12/6/11 CLOSE= 1249.1

Open trades:	Long at:	Entry Level: 1210 (Aug-11-11) and 1170 (Sept-21-11).
	Stop at:	M/T: 2dc below 1100
	Profit targets:	1280 &/or 1330
New Recom:	Keep your position. Sell more at 1280.	
Comment:	S&P is rebounding nicely, but it's still resisting below the July downtrend. Spinner rose from an intermediate oversold area, above its MT MA and now nearing the overbought levels, confirming S&P's strong resistance. This means, at current levels, S&P's downside risk is higher than its upside potential. However, S&P is strong above its Oct/Nov uptrend line, above 1170. As long as S&P stays above this uptrend on weakness, S&P could break above its July/Oct resistance.	

U.S. DOLLAR INDEX MAR 2012 (DXH12) 12/6/11 CLOSE= 79.037

HOLDING AT THE OCT UPTREND LINE

Open Trades	Long at:	76 (Sept-7-11), 77 (Sept-13-11) and 77.50 (Sept-14-11). Some may have sold at 79 or higher for a profit.
	Stop:	M/T: Sell after a 2dc below 75.
	Profit Target	80 (almost reached!) & 82.
New Recom:	If you did not sell, sell the rest at 79.50.	
Comment:	Dollar dipped to the 78 level but held above its 25 day MA near 78.25 showing the dollar's underlying strength. If the dollar can hold above its 25 day MA, it'll likely rise again to test its resistance level. Otherwise, a break below its 25 day MA would show weakness and a reversal in its uptrend since Oct. We'll wait for Spinner to show more weakness before buying again.

Note: U should NOT feel our recommended prices are set in concrete. If mkts suddenly feel hot or cold to U, or dramatic news occurs, U can buy or sell, or stop at slightly higher or slightly lower prices. It also hinges on your experience level. Some people can use our prices as guides & know when they can take bigger risks.

Spinner: Spinner is an in-house momentum indicator (not always shown on charts). Momentum indicators use the rate of change in price to determine predominant energy flows. Spinner trading signals are generated when the faster timing line crosses above or below the slower confirming line. Upside crosses in the lower range of positive territory offer the most reliable signals for longs; downside crosses in the top range of negative territory for shorts. Avoid trading against the timing line, ie, buying/selling if the timing line is in corrective mode (against direction of trade) unless the confirming line is positioning for a new 'confirming cycle'. It's important to always be aware of location, direction & cycling phase of the confirming line. Spinner signals are more effective in trending mkt's than in trading ranges where indicators such as Stochastics & Williams %R should be used.
