IN ITS 19th YEAR – Nº 878

STIMULUS JUST KEEPS ON COMIN' RATES POISED TO BOUNCE UP... A SIGN HYPER INFLATION IS AROUND THE CORNER?

OUR QUARTER IN REVIEW

Governments across the globe continue on a massive spending spree in the name of health. They're ordering a global shut down... it's for economic activity to stop at whatever the cost!

Governments are promising stimulus of all sorts.

From debt and rent relief, to tax payment relief, to business stimulus thru easy money, negative interest rates... it's the promise and commitment to unlimited liquidity.

They will do anything to keep the lights on...

But could the cure be worse than the disease itself?

How long can governments pay for the world to be shut down?

**"Buy on weakness, sell on strength."
-Michael D. Sheimo**

How long will it take people to challenge their fears and get out of their homes, work, give a hug, grab a drink? Will it ever be possible with the growing stigma against sneezers and coughers?

The math suggests it could take the entire month of April on lockdown to make some type of a difference in mitigating the spreading of the virus.

Liquidity to infinity should make it easy for businesses to jump start, to refinance their existing debt cheaply or even write off some of the bad ones. But didn't you hear?... The Fed is buying!

And if stimulus measures are used properly, they could provide relief to debt holders; reducing deep social consequences from economic downfall. This in turn could allow a speedier recovery. It will allow us to jump back where we were before this all started.

Could it go wrong?

Yes, of course it could.

It could be that the economy doesn't jump start. That society grapples with implementing a new normal that changes in many ways the mechanics society has lived by until recently.

There could be an adjustment. It's hard to believe the tourism industry for example, which accounts for 10% of global GDP, will easily forget about the cooties in airplanes and airports.

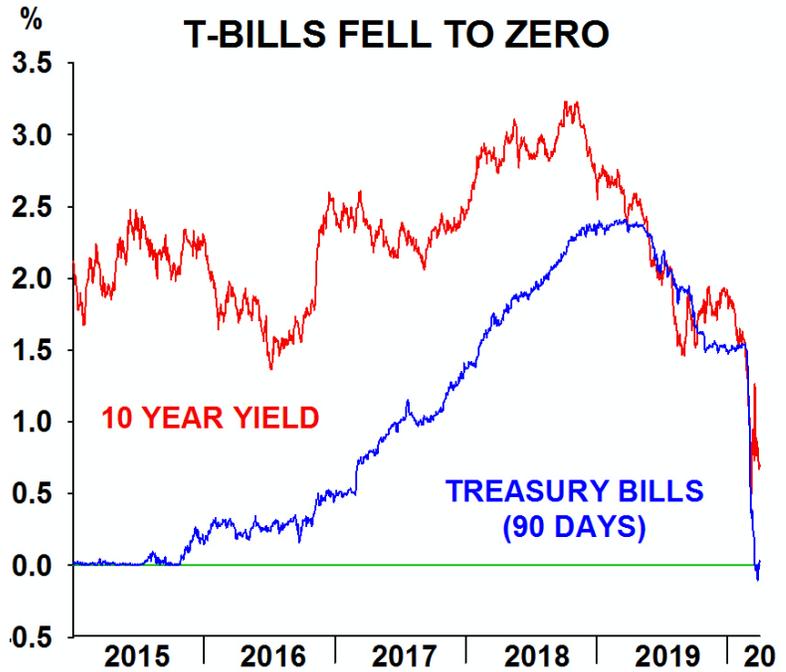

Countries will have to come to terms with opening borders, potentially allowing a health crisis to breakout that could cripple their economies once again. Who will be responsible?

Countries and people that rely on the U.S. dollar as a store of value could see the value of their hard earned dollars dwindle as trillions of dollars are created out of thin air to pay corporate debt, and in many cases I'm sure, corporate mistakes.

Longer term interest rates are starting to bounce up as short term interest rates remain at zero or lower.

The market is pricing a higher cost of money down the road. Could it be the doldrums of hyper-inflation?

Our first chart shows the yield on a 90 day U.S. Treasury-bill together with the yield on a 10 year U.S. T-note, on the same scale. Notice the rate on the 90 day T-bill dipped below zero, while the 10 year yield held up higher and it looks poised to rise further.

This is also the underlying reason backing gold’s secular bull mkt.

This global pandemic could be the very thing that ends up breaking the currency system as we know it.

But there have been many things driving gold up. It's not only speculation of currency destruction.

Global uncertainties due to the virus, geo-politics, local politics, the upcoming democratic process and other reasons have also been supportive of gold and look set to continue.

However, there is some downside pressure brewing. Notice gold’s recent bounce up, from the Dec low, failed to reach a new high showing resistance.

Together with Spinner, price action suggests gold could fall back to test support at \$1450

(Dec lows). A break below this level could push gold to its stronger/deeper support at \$1365.

Keep in mind the underlying fundamentals fueling gold are strong and perceived value can quickly change.

This is why I will keep my position during weakness and add more once our indicators signal gold is cheaper.

The relationship between gold and crude oil is yet another solid example that the pendulum might have swung too far in favor of gold versus black gold.

My next chart is the gold to crude oil ratio since 2003. Notice the ratio favors gold longer term. The ratio reached the top side of the mega up channel just like it did at key moments over the past 20 years.

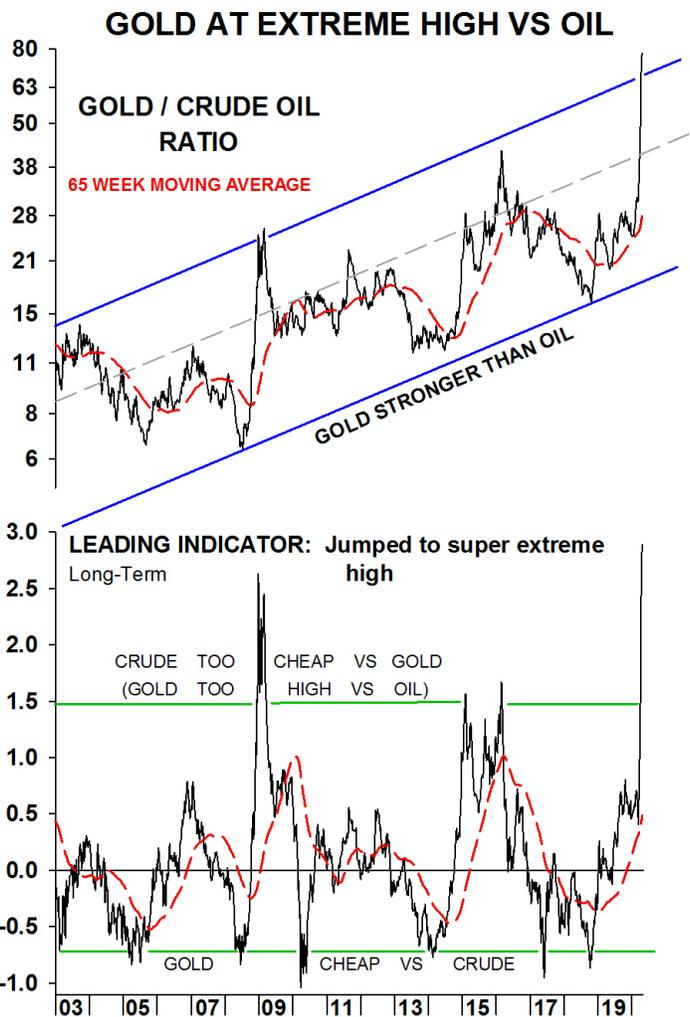

Notice the ratio swung grossly in favor of gold at the depth of the recession after the 2007 stock market peak; then again in 2015 at the secular bottom and once again now.

Notice that on those major dates, the indicator below the ratio also sprung up, to the "Crude too Cheap vs Gold" level.

More interesting is that after each of the peaks, the ratio turned in favor of crude oil for the ensuing years.

The ratio suggests crude oil could be favored versus gold in the foreseeable future.

Just recently, we showed the silver to gold ratio and how it also had reached an all time high

of nearly 125 to 1. The extreme swing in that ratio also suggests the pendulum could swing in favor of silver.

The question begs, are resources poised for a rebound?

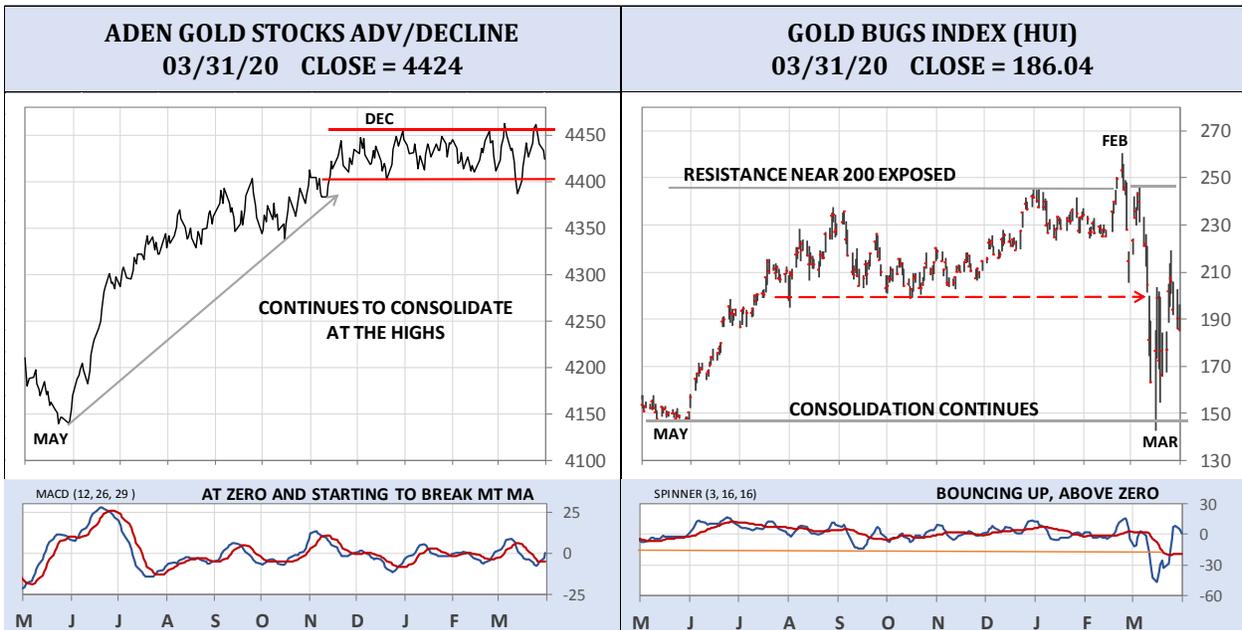

Silver has been coming out of the pits.

It fell hard with resources. It didn't get any safe haven luster from gold. But it's quickly bouncing back up. Since we added positions recently, silver is

up over 20%.

Silver is now testing resistance at a previous support level (\$15). A break above it would show signs of renewed strength. If not, silver could then pull back to the recent lows. Keep your positions for now as the downside seems limited.

Gold and silver shares have also risen with strength and are showing potential for more upside.

Gold shares continue to move similarly with silver, even though gold shares have held up better than silver (it recently fell to a 10 year low).

Notice HUI found support at the May low near 150. It's bouncing up with strength, trying to regain the 200 handle. Resistance at the previous support is gaining relevance.

Spinner is above zero showing strength, but also struggling to clearly breakout. Weakness exposes downside pressure and suggests gold shares are not entirely out of the woods and in the clear.

HUI must break above 200 convincingly for signs of renewed strength to emerge. Otherwise, a decline to re-test the 150 support would be likely.

The chart to the left of HUI is our in house A/D Line. Notice it has been moving sideways since Nov last year. It's suggesting gold shares broadly continue to consolidate. A break above the top side of the channel would be very bullish, just like a break below support at 4400 would expose deeper weakness.

We're holding Agnico Eagle Mines (AEM), Kirkland Lake (KL), NovaGold (NG), Silvercorp Metals (SVM) and Hecla Mining (HL) and Sabina Gold & Silver (SBB.TO).

AEM is holding near the May lows near \$40. High volatility could be telling us the lows are near. Spinner on the rise, but below zero showing weakness.

AEM must rise above the Jan downtrend near \$47 to confirm support at the \$40 level and rise to the recent highs near \$62.50.

Keep your positions. If you're looking to buy or increase exposure, buy at mkt, below \$40.

KL's price pattern is very similar.

It's also holding at the Apr/May lows near \$29. Price movement has been volatile which tends to coincide with bottoms (or tops). Spinner broke above zero suggesting momentum could be shifting to the upside.

Although support above the Apr lows seem set, KL must rise above the Nov downtrend to confirm support and show renewed strength on a 2dc above \$38.

Keep your positions for now. KL continues to bottom.

NG is one of my favorites. It's a rising star given its stellar management team and prime assets. NG has held up stronger than most, and well above the May lows.

NG tested the Oct lows earlier in Mar only to jump back to the top side of the band near the resistance at \$9.50. Spinner is above zero showing strength.

NG is now lingering near the middle of the band not providing clear technical indication. However it's a great company poised to rise with strength during gold's secular bull mkt. Keep your positions.

Take a look at Sabina below. It was one of the only gold shares that rose. It's showing support at the May lows near CA\$1 with room to rebound further before

reaching a key resistance at the Aug downtrend near CA\$1.80. The rise to just that level alone would be impressive and would give us a great return.

However, SBB.TO is poised for more as a rise eventually back to the Aug highs near \$2.40 is likely. That's a rise of 100% from current levels. Keep your positions.

SVM is above its 5wk MA. It reached our break even level and fell back. It's showing some resistance at the Jan downtrend near \$4.50; coincidentally SVM's 15wk MA. A break above \$4.50 would show renewed strength that could push it initially to the Feb highs near \$6.

Keep your positions. Buy below \$3 if you're looking to increase exposure.

HL has not been as strong as SVM. It's resisting below its 5wk MA at \$2.20 showing weakness. HL must rise above its 5wk MA and the \$2.50 level to show signs of renewed strength.

Spinner is on the rise, but it could be resisting near the zero area showing weakness.

Keep in mind, price action suggest the lows (\$1.50) are strong support and HL could rise to the Jan highs if it holds above the deeper support at \$1.50.

Keep your positions.

The U.S. dollar is holding its own. It tends to be sought in times of distress and whenever there's a liquidity crunch. However, the Fed and the U.S. central government are making sure there's plenty of greenbacks out there for everyone.

The endless supply could eventually end up giving assets across the board an upward boost; a price adjustment reflecting inflation and real cost.

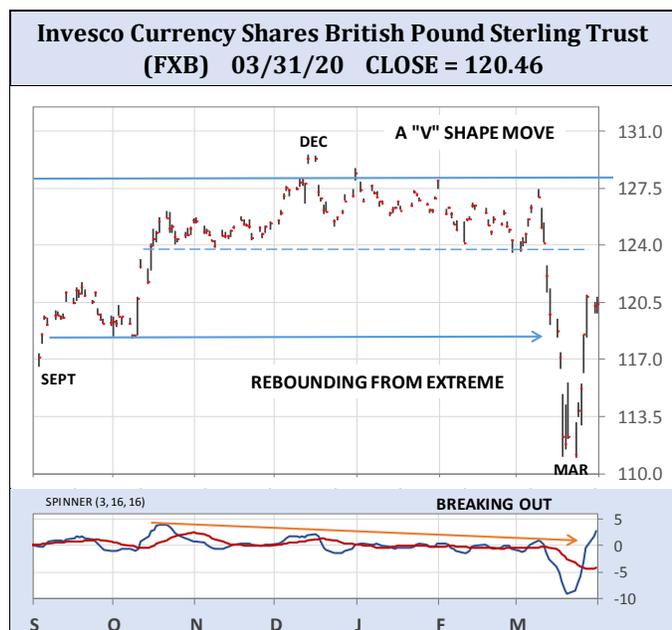

But as uncertain as the dollar's future looks, it's not worse than the Euro, or Latin American currencies, Asia, Africa, you name it. The U.S. dollar today buys most currencies cheaply and it's the most liquid. Most places will take your hard earned dollars with gusto.

This is why we keep our cash position mainly in U.S. dollars.

To a lesser extent, we own some pound sterling too. It's part of our cash pile.

Pound sterling has traditionally been the poster child of price stability and conservatism. Although some of that may have eroded over the years, it's still a symbol of strength.

And with the U.K. in a political environment that will allow it to implement an economic agenda that could spur growth, unshackled by the European

Union's inflexible guidelines, it has also suffered from pandemic fears and panics.

I keep some pound sterling as a way to diversify sidelined cash. Keep your positions.

Resources have been the most exposed.

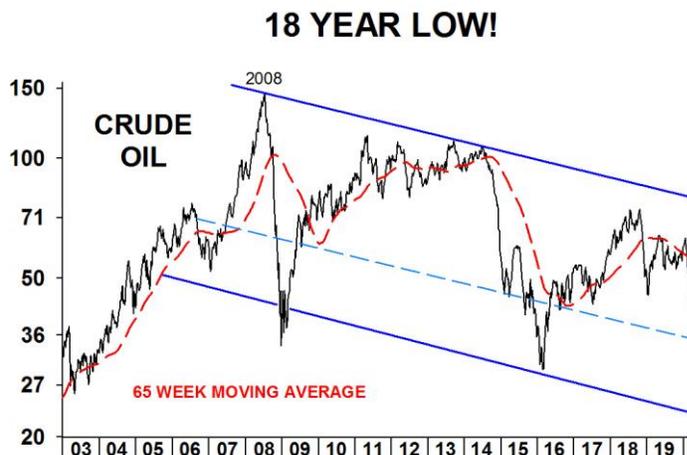

Copper broke down and it's testing a psychological support at \$2.

It bounced up with strength yesterday showing signs of a rebound that could reach the Jan highs near \$2.40. Spinner is perky, but still below zero. If copper fails to rebound stronger and falls below support at \$2, a continued decline to possibly the \$1.50 level would be likely.

Stay out.

Crude oil is another resource that has been punished from lack of global demand. It fell to the bottom side of a downchannel since 2008!

Just today, crude fell to an 18 year low, slipping below \$20. The recent waterfall decline, however, is forming a bull downside wedge pattern with upside target near \$40. A break above \$23 shows strength that could fuel the rise to the mid-channel line near \$40.

Price swings in commodities are heavy given the uncertainty surrounding everything. This is why I have a limited exposure to resources thru blue chip companies like Exxon Mobil (XOM) and BHP Billiton (BHP).

I locked in a great dividend yield on both companies that allows me to look over the valley as panic of a pandemic continues to unravel. Price appreciation alone could likely to be a main contributing factor too once things go back to normal.

Notice BHP rising from an extreme low. It reached the bottom side of a 8 mo long funnel.

BHP is now bouncing up, forming a bull flag pattern with pole resistance just below \$40. A break above \$40 confirms the bullish flag pattern that could push BHP initially to the Jan downtrend near 44.

A break above \$44 could see BHP rise to the top side of the funnel near \$60. Spinner is bullish, above zero, with room to rise further.

Keep your positions.

XOM has a similar story. It's bouncing up from the bottom side of the Jan downchannel. It's testing the mid-channel line at \$40. A break above \$41 will show strength that could push XOM to the Jan downtrend near \$58. A break above this level pushes XOM to the higher \$60s.

Spinner is breaking out from zero, but still struggling to overcome its resistance. Keep your positions.

We're also holding blue chip U.S. stocks that will likely hold on during weakness as the pandemic remains. U.S. companies especially will be receiving loads of stimulus money to help them weather the storm.

We bot some more Citigroup (C) last week as it was starting to rebound. It rebounded even stronger after breaking above resistance at \$40.

C is now forming a bullish flag pattern with pole resistance at \$46. The price pattern suggests a break above \$46 on a 2dc could push C to the Jan downtrend near \$60.

Spinner is still sluggish, rising from an extreme and testing zero. It's suggesting momentum is rising. Keep your positions.

ATT is also another great blue chip company that we locked in a great dividend yield in. It will allow us to hold on thru weakness and remain exposed to the post virus era that will likely be somewhat contact-averse.

ATT is bouncing back, forming a bullish flag with pole resistance at \$31. This tells us a break above this level could be bullish for ATT. Keep your positions.

Two other companies that could thrive in the new post-virus normal are healthcare companies as consumers will gear towards medical products and services as self awareness grows.

Notice NVS reached a new high today, surpassing resistance at \$82. Spinner is also on the rise, breaking above zero with room to rise further. This suggests NVS could soon regain the \$90 handle and eventually test the Feb highs near 100.

Buy a bit at mkt, ideally below \$80 to increase exposure to healthcare companies.

And together with a likely increase for health products, we'll see continued growth in online sales and product delivery. SHOP provides a platform to be able to offer goods and services throughout the system's database.

We picked up SHOP a couple of weeks ago at the lows, below \$350. SHOP is up over 20% since we bot.

SHOP remains very bullish above the May uptrend near \$300. Keep your positions.

Our First Quarter 2020 results

The end of a new quarter is upon us. It hasn't been pretty. Quite the contrary. The unexpected declines due to fears of the spreading virus has taken a toll on Wall Street and Main Street.

We sold the second half of our position in gold after a year + long run up. We ended up protecting a 32% gain for the move in just over a year.

This quarter we also did well trading U.S. government bonds. We first started with TBT, which rises with interest rates, and secured a 5% gain. After selling, we jumped into UBT a bond ETF and made nearly 18% in profits (combined total of 23% in just one quarter!).

We also did well selling our positions in Procter and Gamble (PG) protecting handsome profits. Those gains, however, were offset by losses in Guangshen Railways (GSH) given the virus breakout.

Noteworthy, GSH ended up falling deeper (nearly an additional 30%) after we sold. So although a loss was logged, we avoided going thru weakness with a company that is not as strong as the blue chip stocks we're holding.

Our biggest loss was in resources. We took losses in Denbury Resources (DNR) and crude oil. The losses offset most gains from the quarter. I honestly didn't count on crude's mega support at \$40 broken to the downside nor on Saudi Arabia and Russia waging a price war.

We're positioned to do well in the upcoming future. Keep your positions. They're good ones!

TRADER SHEET

Symbol	Trade Update &/or Current Position	Status L=Long S=Short O=Out P=Put C=Call	Long or Short	Last Closing Price	Stops	Targets
PRECIOUS METALS PORTFOLIO (40%)						
GOLD (GCM20)	Wild moves! Gold completed a V shape recovery after falling to the Dec lows earlier this month. It's now consolidating the bounce up near the highs. It's starting to form a bullish flag pattern with an upside target at \$1800. For the pattern to be confirmed, gold must break above the Feb high and stay above it. Keep your positions. Wait for further weakness near \$1400 to buy more.	L	Bot: 1485 (Mar-18-20).	1596.60	2dc below 1300.	Sold
PHYS	Keep your positions. Wait for weakness to buy more.	L	11.75 (Mar-18-19).	13.12	Holdin g	Open
SILVER (SIK20)	Previous support at \$15 becoming key resistance. Spinner under pressure, below a downtrend since Sept suggesting momentum remains lackluster. This could mean slack in resources remains and it could continue weighing down on silver in the month or so to come. However, a break above \$15 would be very bullish for silver and a continued upswing would then be likely. Keep your positions.	L	Bot: 15.80 (Jul-17-19), 16.50 (Aug-7-19), 16.80 (Nov-8-19), 12 (Mar-18-20).	14.156	Holdin g.	Open
PSLV	Keep your positions. Wait for weakness to buy more.	L	Bot: 5.50 (Jul-17-2019), 6.25 (Aug-7-19), 6.19 (Nov-8-19).	5.95	Holdin g	Open
HUI Index	Rebound rise underway! Gold shares continue to stage a strong rebound from the May lows. It's showing some resistance at the 200 level, previously an important support level. A clear break above 200 ST would show strength; however, HUI must surpass the old Feb highs to be out the woods with more upside potential. Encouraging has been the action in A/D Line. It hasn't fallen below the sideways consolidation band that began in Nov-Dec. This suggests, after removing all of the volatility and noise, a consolidation in gold shares continues. We have solid exposure to miners. Keep your positions and look to add more on weakness if you're underweight.	--	N/A	186.04	N/A	N/A
AEM	Consolidation continues... Volatility remains high as AEM looks to consolidate a bottom near a key support area. Spinner has bounced up from an extreme, but looks sluggish below the zero line. This suggests, downside pressure is still present. If AEM holds above the support area it's forming and rises above the Jan downtrend at \$47, we could see a stronger rebound that could reach the Feb highs near \$62.50. Keep your positions. Buy on weakness below \$40 if you're under exposed.	L	58.75 (Jan-9-20), 49.50 (Feb-19-20), 36.50 (Mar-18-20).	39.79	Holdin g.	65 & 80
KL	Consolidating above previous Apr low & support level. Volatility remains high, and wild swings are common. However, it seems KL is looking to consolidate its support area which appears to be \$29. Keep in mind, KL must rise above the Nov downtrend at \$37 to show a stronger phase of its rebound rise. Keep your positions. Buy on weakness below \$30 if you're underexposed.	L	37.50 (Feb-19-20), 34.50 (Mar-4-20), 26 (Mar-12-20).	29.60	Holdin g.	-
HL	Consolidation. Just like most gold shares, HL is consolidating the bullish rise from the Mar lows. The rise since was nearly an 80% rise in just a few days. Spinner just broke above zero suggesting momentum may be turning up. More upside is likely. But be patient. Some more consolidation and volatility is likely until a bottom is clearly established.	L	2.96 (Jan-28 -20), 2.65 (Mar-4-20), 1.65 (Mar-18-20).	1.82	2dc below 1.30	3.50 & 6
SVM	Pulling back after nearing Dec downtrend exposing key ST resistance at \$5. A break above this level would be very bullish. The Jun lows, on the other hand, are key lows. Spinner is suggesting SVM might start consolidating. Keep your positions. Buy a bit more on weakness below \$3.	L	5.49 (Jan-6-20), 4.92 (Feb-4-20), 3.40 (Mar-4-20).	3.27	2dc below 2.25	6 & 9
SBB.TO	The laggard... Sabina has seemingly confirmed the May lows as strong support. Spinner is rising from an extreme low and just pierced above the zero line, suggesting momentum could pick up the pace. Sabina's next key resistance is at the Aug downtrend near \$1.75. A rise to that level ST is likely. Keep your positions. If you're looking for more exposure to Sabina, buy on weakness, ideally below or near CA\$1.	L	1.55 (Mar-4-20)	1.17	Holdin g	-
NG	NG is also consolidating below the Feb high & resistance level near \$9.50. Spinner on the rise from an extreme. It's now above zero, with lots of room to rise. The move seems promising. NG has seemingly confirmed the Oct low as key support and if this level is held during consolidation, a break above the key resistance at \$9.50 would be likely. Keep your positions. Still waiting for weakness below \$7 to pick up more.	L	8.50 (Mar-4-20), 7.65 (Mar-18-20).	7.38	2dc below 6.50	10.50 & 13

TRADER SHEET CONTINUED

Symbol	Trade Update &/or Current Position	Status L=Long S=Short O=Out P=Put C=Call	Long or Short	Last Closing Price	Stops	Targets
CURRENCIES (30%)						
U.S. DOLLAR (DXM20)	Breakout, pull back... The dollar is seemingly completing its pull back from the recent highs. It's showing some support near the previous Feb high resistance. Price action suggests, if the dollar holds above 98, it'll remain very bullish and more upside would be likely. The dollar has confirmed and established support at 96. A clear break below this level could change dollar's trend to down. I'm still keeping most of my cash in U.S. dollars.		-	99.09	-	-
FXB	Pound Sterling seems to be developing a clean 'V' shape recovery. Notice Spinner breaking above a downtrend showing momentum picking up steam. A break above 124 would show a stronger rebound rise that could test the Dec high & resistance near 130. Keep part of your sidelined cash in pound sterling.			120.46	-	-
RESOURCES AND ENERGY (14%)						
Crude (CLK20)	Crude fell to a new 18 year low. It pierced below \$20, and downside pressure remains strong. However, Spinner has been recovering from an extreme as crude oil forms a bullish downside wedge pattern. The pattern suggests a break above \$22 could ignite a rebound rise that could reach the top side of the Jan downchannel near \$40. I'm not about to jump into crude, although it is tempting. Too much uncertainty still lies ahead. We will continue to play the oil market thru established, blue chip energy stocks like Exxon Mobil (XOM). For those of you who are looking to speculate, price action in crude seems ripe. But be aware as demand remains lackluster and supply continues to grow.	O	Out	20.48	0.00	0
XOM	On the rise... XOM is also showing signs that a bottom above \$30 is forming. Spinner rose above zero for the first time in a few months suggesting momentum could be shifting its way. XOM could rise to the top side of the Jan downchannel near \$55. Buy more on weakness, below \$35.	L	61.90 (Feb-6-20), 61 (Feb-12-20), 50 (Mar-5-20), 32 (Mar-18-20).	37.97	2dc below 30.	69 & 75
COPPER	My more optimistic self sees copper consolidating at a psychological support level near \$2 just as Spinner pierces its MT MA showing upside potential. This suggests, copper could bounce up to the Jan downtrend near \$2.40. However, Spinner remains below zero and a bear flag is forming at the lows. Price action suggests if copper fails to hold onto \$2 support, it could fall to \$1.50. Overall with resources across the board, demand remains lackluster and uncertainty about the time the current situation could last will continue putting downside pressure. Stay out. We'll continue having exposure to copper thru BHP Billiton (BHP).	O	-	2.2280	Out	-
BHP	BHP seems to have confirmed support above \$30. Spinner on the rise, breaking above zero, showing momentum could shift up ST. BHP is a great company, offering a great dividend yield (at the prices we bot). It's the better play on copper, particularly since BHP will likely be the beneficiary of global stimulus. Keep your positions.	L	54.75 (Jan-15-20), 52.50 (Jan-30-20), 43 (Mar-5-20), 31.50 (Mar-18-20).	36.69	2dc below 30.	60
MELT UP RISE PORTFOLIO (16%)						
C	C is forming a bottom at the extreme lows, just as Spinner is testing zero. Price action suggest C could have already set a low just above \$30 and a stronger rebound seems likely. A break above \$46 could show renewed strength that could push C to the Jan downtrend near \$75. We bought more last week.	L	73.75 (Nov-20-19), 40 (Mar-25-20).	42.12	Holdin g.	85 & 100
T	Like with most stocks, T is also staging a rebound from extreme lows. Spinner is also on the rise, approaching the zero line. T is looking healthy above \$30 and if it holds and breaks above \$31, a continued rebound rise to the Jan downtrend near \$37 would be likely. Keep your positions. Buy some below \$30.	L	38.75 (Jan-22-20), 37.50 (Feb-4-20)	29.15	Holdin g.	50
NVS	NVS is benefiting lots from the current bounce up. It's also a great healthcare company that will no doubt benefit from stimulus. NVS is a company that could benefit lots in the post-virus era. Buy some at mkt.	L	94.75 (Jan-23-20)	82.45	Holdin g.	120
SHOP	SHOP has been one of our best stocks. It's a great company that is poised to thrive in the new post-virus era as online shopping becomes more common place (more than it already has become). SHOP could thrive during a stock market bounce up/recovery along with other tech companies that offer similar services including the online retail giant Amazon. Keep your positions. We've already logged in a nice profit, but the rebound could just be starting!	L	350 (Mar-16-20), 315 (Mar-18-20).	416.93 17	Holdin g	600

Quoting *GCRU* is permitted provided *GCRU* name, website address & subscription price are given.

All charts in *GCRU* are daily prices.

Subscribers can obtain free online chart updates for all gold shares in *GCRU* via: www.bigcharts.com. To view Canadian stks please use CA as prefix (i.e., to view Agni Eagle (Toronto) you must use CA: AEM).

Note: U should NOT feel our recommended prices are set in concrete. If mkts suddenly feel hot or cold to U, or dramatic news occurs, U can buy or sell, or stop at slightly higher or slightly lower prices. It also hinges on your experience level. Some people can use our prices as guides & know when they can take bigger risks.

Spinner: Spinner is an in-house momentum indicator (not always shown on charts). Momentum indicators use the rate of change in price to determine predominant energy flows. Spinner trading signals are generated when the faster timing line crosses above or below the slower confirming line. Upside crosses in the lower range of positive territory offer the most reliable signals for longs; downside crosses in the top range of negative territory for shorts. Avoid trading against the timing line, i.e., buying/selling if the timing line is in corrective mode (against direction of trade) unless the confirming line is positioning for a new 'confirming cycle'. It's important to always be aware of location, direction & cycling phase of the confirming line. Spinner signals are more effective in trending mkts than in trading ranges where indicators such as Stochastic & Williams %R should be used.
