Achieves gains by trading commodities, currencies and stocks

May 13th, 2020

IN ITS 19th YEAR – Nº 884

UNCERTAINTY PUTS DOWNSIDE PRESSURE ON MARKETS FED BUYS CORPORATE BONDS SILVER CATCHES A BID, SHOWING POTENTIAL!

Fear and uncertainty are rising as governments and society struggle with returning to normal.

Unwinding the lockdown is harder than most would think.

And the main reason is this... How can one convince society to return to normal after being made aware of the all the 'cooties' that we're exposed to on a daily basis?

I suspect that as lockdown restrictions are lifted, many people will still stay at home, consumption will remain subdued and other industries will temporarily disappear until they can adjust or reinvent themselves.

"Don't fight the Fed!" - Anonymous

Moreover, globally the number of workers on unemployment is at record high levels and it won't likely return to normal anytime soon.

It remains to be seen at what pace businesses will be able to generate enough activity to bring those lost jobs back. Also unclear is what the "new normal" will entail and at what cost will the market and society feel comfortable.

Some industries will no doubt take longer to recover than others (i.e. tourism), adding to uncertainty.

Warren Buffett's sale of airlines is not about the capital losses. As a trader and investor, he understands that if the value is there, the price will re-adjust and reflect.

However, uncertainty as to what the market will demand from this industry is too great to be measured.

Other industries are poised to thrive. New ones will likely emerge.

One thing seems certain, the largest, most diversified companies are the ones that are better equipped to weather the storm.

I've held certain stocks during the recent bounce up (not many). Not because I believe there's economic activity that supports it, but rather because central banks across the board promote it and to a degree, insure it.

Just today, in an unprecedented move and for the first time ever, the Fed purchased corporate bonds (thru ETFs)!

And with bond yields at or near negative, investors are not really given a choice. Many end up buying equities simply because there's nothing else with a yield.

Our chart of the week below shows the S&P 500, crude oil and the yield on a 10-year U.S. government note bond. You'll notice that all three charts move together.

Until 2019 that is, when the S&P 500 decoupled from crude oil and the 10YY. At that moment, crude oil and the 10YY started moving sideways to down while the stock market shot up.

The virus decline in March affected all three and while stocks held up the strongest, they are now extremely overbought ST.

Could rates and energy rise as stocks consolidate or start turning down? Or will the Fed propped-up stock market pull everything up with it?

Interestingly, my stop for ATT (T) was triggered last week on Thursday. I sold my positions for a loss on Friday.

Even though we logged a loss, our stock portfolio this year remains up double digits, thanks mainly to amazing returns on Shopify (SHOP) earlier this quarter.

T has broken below the uptrend since Mar, invalidating the bullish ascending triangle, showing signs of

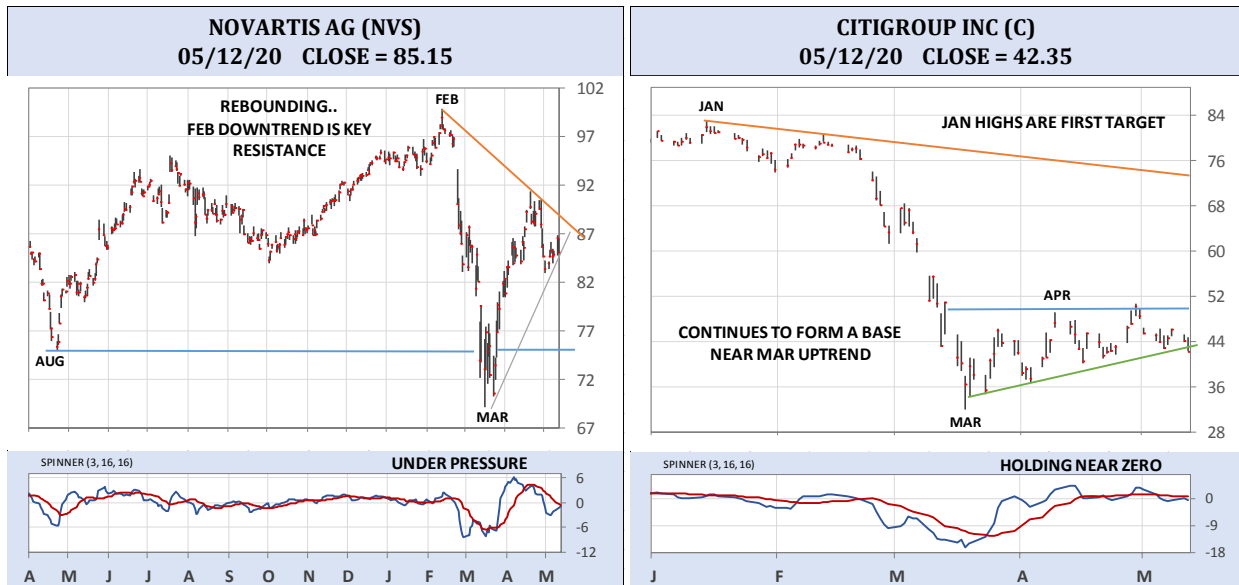

weakness. Although ATT is a great company with strong stability, I'm staying away from it now, as both a way to increase cash positions and also reduce exposure to stocks a bit more.

With the sale of ATT, exposure to equities other than miners and producers is in the single digits. I continue to hold positions in Novartis (NVS) and Citigroup (C).

NVS is a giant healthcare company. Big Pharma. A company that has a seemingly bright future in the post-virus new normal.

It's showing some weakness today, together with most stocks. Allow for some leeway, keep your positions as long as NVS holds above \$80.

NVS must break above \$92 to show renewed strength. Keep your positions.

Citigroup (C) is another company that is hurting, but with a bright future as it will most likely benefit directly from the massive amounts of stimulus that have been created.

It's showing weakness today, falling below its 5wk MA. It's back at the lower \$40s, testing support.

If C holds above \$40, it could show signs of renewed strength that could push C to its 15wk MA near \$55. Keep your positions.

Resources Trying to Rebound

Resources are attempting a rebound rise. Crude oil had a breakout week, breaking above Feb 2020 resistance, opening the path to \$40.

With Trump's eye on helping the oil industry, we could expect upside potential.

Crude oil will remain bullish by holding above its 5wk MA at \$21.75.

Other resources, such as copper, are also staging a rebound. It hasn't been as noticeable as crude oil's rise, but it is key.

Dr. Copper has been rising for nearly two months. It broke above the Jan downtrend and resistance level showing upside potential.

However, copper's up move has been tepid given the fragile global recovery. It remains vulnerable to more downside, particularly if it fails to surpass resistance at \$2.40.

On the downside, keep an eye on support level near \$2.30. A break below this level would be bearish.

Exposure to resources remains low at under 15% of our total portfolio. Exposure is concentrated in two big, well-established low risk companies: Exxon Mobil (XOM) and BHP Billiton (BHP).

XOM gave back most of its gains achieved this week on overall stock market weakness.

However, XOM is holding above its 5wk MA near \$44 looking poised for more upside. XOM must rise above \$48 initially to show a sign of strength that could push it to the 2020 highs near \$70.

On the downside, if XOM fails to surpass \$48, and falls below \$43, it

could show weakness with more downside pressure. A decline to \$38 would then be likely.

XOM recently released quarterly earnings posting a net loss for the quarter. However, the loss was nominal compared to normal business activity and one that will likely be sustained without major complications.

XOM also confirmed its dividend payout. At our average entry level, the 0.87 cents per share ends up being a 1.5% yield since we bot (project 6% per year).

The dividend yield is already eating away at the small capital losses we've sustained to date. Keep your positions.

BHP had regained the \$40 handle earlier this week, but quickly gave it back with today's broad spread decline.

BHP is resisting at \$42 while showing support at \$39. If BHP breaks below \$39, weakness could extend. Conversely, if BHP holds at \$39, it could then rise above resistance at \$42.

A break in either direction will be very telling.

Consider BHP is showing lots of strength. It has rock solid financials and it's committed to keeping its dividend payment. One of the primary reasons we're holding through weakness; it's tougher with XOM.

Keep your positions for now.

Silver Catches a Bid

Rebounding resources are being welcomed by silver.

Not only is silver following gold on its safe haven rise, it's also showing added support from resources as they jump up from extreme lows.

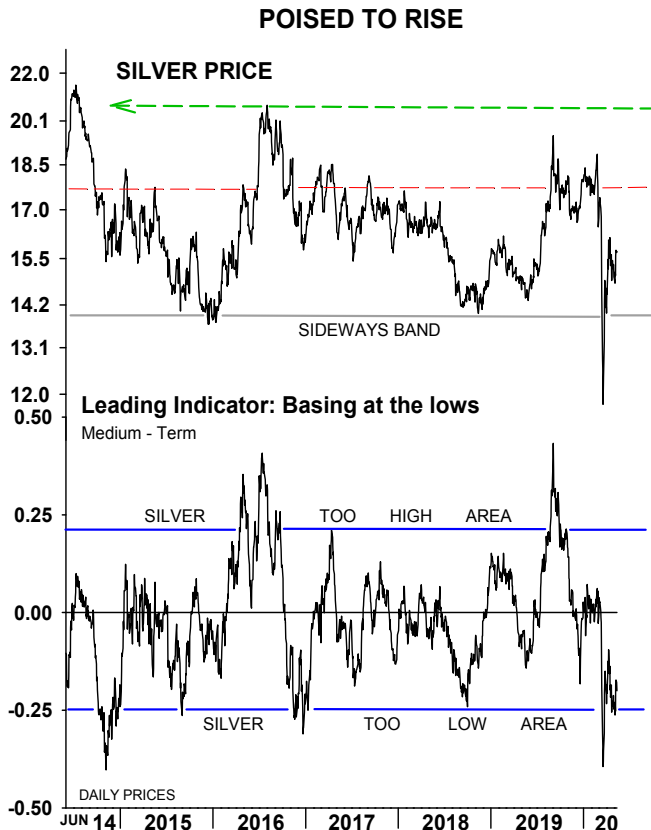

Silver is showing great potential that cannot go unnoticed.

I already have a full position. Readers from the past year will most likely have a full position too.

I recommended new readers who might be out, to buy some at mkt last week. Hopefully those of you who did bot at the lows before it took off!

Silver broke above its 5wk MA. It's showing upside potential. On the chart, notice silver coiling at the bottom side of a sideways band since 2015.

Moreover, the indicator below is also suggesting silver might be too low.

The chart is bullish for silver. It suggests the downside is limited and some upside is likely.

A break above \$16.50 on a 2dc could push silver to our profit target above \$19. If silver fails, however, and falls below \$15, more downside pressure would be likely.

Silver shares have been looking good. They're showing more upside potential than gold shares. They'd been lagging gold shares too.

I have two positions: Silvercorp Metal (SVM) a low-cost silver producer that's slowly merging into a more diversified production within precious metals and a traditional silver mine with increasing exposure to gold mining, Hecla Mining (HL).

SVM just recently broke above resistance at \$4. It's showing upside potential above \$3.80 but is still struggling to surpass the downtrend since Jan at \$4.20.

Consider SVM must break above this level to show renewed strength. If it fails and falls back below \$3.80, a decline to \$3 initially would be likely.

Keep your positions for now.

HL is also showing strength. It recently broke above a key resistance at \$2.50 and it's held above.

Today's price action was caused by the greater market decline but remains up trending above \$2.40. HL has held up better than most silver miners given its recent pivot to increasing gold production.

Keep your positions for now.

I'm adding a new position to our recommendations - Fortuna Silver (FSM). It's a low-cost silver miner with operations in Peru and Mexico. More recently FSM started developing a gold project in Argentina.

FSM has amazing proven silver and gold reserves that far outweighs the value of the stock. Trading FSM is a cheap way of having exposure to silver.

If you're not exposed to silver shares, consider buying some at mkt and more on a dip below \$3. Because two of my largest positions are silver shares, I will wait for a decline in FSM below \$3 to buy.

Gold: the only game in town

Gold edged lower as risk on sentiment grew earlier this week. It pushed gold down below \$1700. For the first time, signs of weakness had emerged. A sign the bullish up move was done had started to show up everywhere.

However, uncertainty and fear are back. It's louder. It pushed gold back above \$1700.

Gold continues to form a mega bullish flag pattern with support at \$1680 and pole resistance at \$1780.

This means a break above \$1780 confirms strength and a rise to the all-time highs near \$1900 would then be likely.

Conversely, a break below \$1680 shows weakness and voids the bullish pattern.

You'll remember that I sold the second part of my positions in gold just before the virus led collapse to \$1450.

We protected a 32% gain in the first quarter. And a bit later, when gold fell with most other asset classes, we picked up new positions.

Positions in gold are reduced. It's the smallest position within my precious metals' portfolio. I have more exposure to gold shares, silver and silver shares. Silver and the miners are poised to outperform gold moving forward.

This is why I will keep my gold. I already took profits and I'm holding an amount that I feel comfortable with. If you have not sold any gold during the past 18-month bull

mkt rise, then consider selling some at mkt.

But don't sell all, fundamentals fueling gold are very strong. Patience on any downside action is encouraged.

Gold shares are also looking good. They reached new highs, just before they fell along with most asset classes yesterday.

But HUI is holding near the highs. It's very bullish above its 5wk MA near 260. The breakout above the 2016 top was a very telling one, suggesting bullish upside potential.

Miners overall are primed to rise further as gold's secular bull mkt unravels.

We've taken partial profits in Agnico Eagle Mines (AEM), Kirkland Lake Gold (KL) and NovaGold (NG) and sold the totality of Sabina Gold & Silver (SBB.TO)... all for great profits.

AEM rose to new highs this week. It surpassed resistance at \$62.50, breaking to new highs for the move.

Price pattern and breakout are very bullish and suggest continued upside.

Spinner, however, is sluggish. It's declining, below its MT MA showing weakness. This suggests some downside is likely before the rise ensues.

Keep your positions.

KL is resisting below the Jan 2020 high near \$45. It's now testing ST support at \$39. A break below this level could push KL to deeper support level.

KL's stronger support level is \$36. If KL holds, a rise to the \$50s would be likely, initially.

Keep your positions.

NG is one of my favorite gold miners. It has great assets and management and it's poised to rise further as long as it stays above \$10.50.

Noteworthy, NG rose to new highs first, leading the pack of gold shares. It was then followed by others. It has been declining since last month, forming a bull flag pattern.

A break above \$13 confirms the pattern and a rise to higher highs would be likely.

U.S. Dollar Index: Flexing

The dollar index continues to consolidate between the narrowing trading range of 99 and 101.

A break in either direction will be very telling as to the next move in gold (and most asset classes). A break above 101 will put downside pressure on all assets. A break below 99 takes it away.

Although there are many issues that are eating away at the dollar's purchasing power, it remains the strongest currency out there. The reason is basically its liquidity and easy to use payment system.

Consider also that most other countries have embarked upon fiscal ventures that are not sustainable. Any loss in currency value will likely be widespread.

I also have a bit of my cash in pound sterling.

Pound sterling has yet another strong foundation. It's weaker than the U.S. dollar, but stronger than most of its kind. Britain's conservative congress will allow the country to move faster and stronger, unconstrained in the implementation of a solid economic agenda. Keep your positions.

Our strategy for this week is to thin out your portfolio by selling ATT (if you didn't already). Keep an eye on the critical levels in gold shares to identify renewed strength or developing weakness.

Good luck and good trading,

Chief Trading Strategist/GCRU

PRECIOUS METALS PORTFOLIO (40%)						
GOLD (GCM20)	Bullish and approaching key juncture... gold is forming a massive bullish flag pattern since the Mar lows. A break above \$1740 exposes strength and a break above \$1785 confirms the bullish pattern that could push gold to the old highs. If gold fails to break resistance, it'll show weakness and could then fall to test ST support at \$1680. A break below support opens the door to a deeper decline, to possibly even the Nov lows. Keep your positions for now. Sell at profit target (\$1900).	L	Bot: 1485 (Mar-18-20).	1706.80	2dc below 1300.	1900
PHYS	Keep your positions. Sell when gold reaches profit target.	L	11.75 (Mar-18-19).	13.76	Holding	Open
SILVER (SIN20)	Silver continues to show higher lows since bottoming in Mar. It's forming a bullish ascending triangle. Silver is strong above the Mar uptrend at \$15. And if it holds above this ST support, and rises over \$16.50, silver could then reach our profit target at \$19. But if silver breaks below, the bullish pattern would dissolve, and a decline to the Mar lows would then be likely. Spinner is showing momentum is rising. Keep your positions.	L	Bot: 15.80 (Jul-17-19), 16.50 (Aug-7-19), 16.80 (Nov-8-19), 12 (Mar-18-20) (AVG: \$15.275)	15.709	Holding.	19 & 25
PSLV	Keep your positions. Sell when silver reaches first profit target.	L	Bot: 5.50 (Jul-17-2019), 6.25 (Aug-7-19), 6.19 (Nov-8-19), 4.65 (Mar-18-20) (AVG: 5.65).	5.52	Holding	Open
HUI Index	Bullish. HUI Index rose nearly 100% intraday from the Mar lows to the recent 7+ year highs. Indicators of different sort and lengths are starting to show gold shares might be entering into a high area and momentum ST could start fading. The Feb highs near 260 are key. It's a previous resistance that could become support ST. Interestingly, HUI's key 5wk MA is also at 260. A powerful convergence telling us that gold shares remain very bullish above this level. But if HUI breaks below, it could lead to a deeper pull back, initially to 200. Over the past month we've protected some profits built, increasing cash positions. However, we still have solid exposure and will buy more at the right time.	--	-	275.46	-	-
AEM	Breakout! AEM broke above key resistance at \$62.50 exposing strength and more upside potential. Spinner is under pressure, suggesting ST the rise may be overdone. AEM is very bullish above \$60. Keep the rest of your positions.	L	58.75 (Jan-9-20), 49.50 (Feb-19-20), 36.50 (Mar-18-20), 39.65 (Apr-1-20) (AVG: \$46); Sold half via alert at \$61+ for 32 ½ % gain.	64.23	2dc below 46.	80
KL	KL is showing resistance below the Jan highs near \$45. Spinner on the decline, showing momentum waning ST. Price action suggests ST weakness. However, an adj uptrend since the Mar lows exposes bullish support at \$37. Keep your positions for now.	L	37.50 (Feb-19-20), 34.50 (Mar-4-20), 26 (Mar-12-20), 29 (Apr-1-20) (AVG: \$31.75). Sold half at \$43.50 for average 40% gain (Apr-29-20).	39.66	2dc below 30.	Open
HL	HL is holding above a recent resistance level near \$2.50 just after breaking above it. Price action is bullish. If HL holds above this ST support, it could rise to the top side of the Mar upchannel near \$3.50 (near our first profit target). Keep your positions. Sell half at first profit target.	L	2.96 (Jan-28-20), 2.65 (Mar-4-20), 1.65 (Mar-18-20) (AVG: \$2.42).	2.53	2dc below 1.50	3.50 & 6
SVM	SVM continues to rise, approaching the key Dec downtrend & resistance level near \$4.20. This time, Spinner is starting to gain steam, and looking ready to take off. If SVM breaks above \$4.20 and stays above this level, it could rise to the Dec highs, near our first profit target. We've been patient with SVM, but its time to shine might be approaching. Keep your positions.	L	5.49 (Jan-6-20), 4.92 (Feb-4-20), 3.40 (Mar-4-20), 3.45 (Apr-7-20) (AVG: \$4.40).	3.90	2dc below 2.25	6 & 9
FSM	Fortuna Mining is a growing precious metals producer with 2 low cost mines in Peru and Mexico. It's also developing the Lindero gold project in Salta, Argentina. FSM has great assets. It's a great play on gold and silver. If you're underexposed silver shares, buy some at mkt and more below \$3. I already have exposure to silver shares through HL and SVM. I'll wait for a dip below \$3 to buy. Place stops at 2dc below 2.25. Profit target at \$4 & \$5. FSM is rising from Mar lows with strength. It's looking very bullish above the Mar uptrend near \$2.80.	O	-	3.28	-	-
NG	NG is forming a bullish flag pattern with \$10.50 and pole resistance at \$13. This means, if NG holds at \$10.50 and rises above \$13, it'll show renewed strength with more upside potential. Conversely, if NG breaks below support at \$10.50, it'll suggest the current upmove is over and some more down time or consolidation would be likely. We already sold half of our position for a profit. Keep the rest for now.	L	8.50 (Mar-4-20), 7.65 (Mar-18-20) (AVG: \$8). Sold half at 11.50 (Apr-15-20) for 45% gain.	10.85	2dc below 6.50	10.50 (surpassed!) & 13 (almost reached!)

TRADER SHEET CONTINUED

Symbol	Trade Update &/or Current Position	Status L=Long S=Short O=Out P=Put C=Call	Long or Short	Last Closing Price	Stops	Targets
CURRENCIES (39%)						
U.S. DOLLAR (DXM20)	The U.S. dollar index continues to consolidate within the narrow trading range between 99 and 101. The dollar remains the most sought currency globally for its liquidity and payment systems. That hegemony will remain during lockdown and times of fear. However, as the dollar breaks out from its consolidation (whichever way it does), it will influence what happens in other markets. A break above 101 puts downside pressure on most asset classes. A break below 99 would be supportive. Keep your sidelined cash in dollars mainly.		-	99.96	-	-
FXB	Pound sterling also continues to consolidate. Recent price movement has been similar to that of the U.S. dollar as it consolidates between \$1.20 and \$1.23. Spinner remains under pressure. Keep some of your cash in pound sterling.		-	118.97	-	-
RESOURCES AND ENERGY (13%)						
Crude (CLM20)	Crude is staging a comeback. It broke above the Feb downtrend showing the rebound has legs. It has support at \$20. Crude oil's next resistance is the Jan downtrend near \$40. Spinner is bullish, but may be nearing an overbought level. Stay out for now. The demand/supply mechanics remain shocked. I continue having exposure to energy through Exxon Mobil (XOM).	O	Out	26.33	-	-
XOM	XOM continues to show signs of strength. It continues to rise above its Mar uptrend. It's now testing a key resistance: the Jan downtrend near \$48. A break above this level would show renewed strength with more upside potential. A rise to the Sept downtrend near \$67 would then be likely. Keep your positions for now. We're near break-even for the year, with handsome upside potential.	L	61.90 (Feb-6-20), 61 (Feb-12-20), 50 (Mar-5-20), 32 (Mar-18-20) (AVG: \$51)	44.12	2dc below 30.	69 & 75
COPPER	Copper confirmed rebounding strength by rising to a new high for the move. Spinner is showing momentum picking up steam. This tells us, if copper can hold above the Mar uptrend near \$2.35, a rise to the top side of the channel, near \$2.60 initially, would be likely. A pick up in resources is likely to coincide with a pick up in business activity globally as the world seeks out of a lockdown. I continue to have limited exposure to resources through BHP Billiton (BHP).	O	-	2.3590	Out	-
BHP	BHP is looking very strong above the Mar uptrend near \$39. It recently regained the \$40 handle but it's struggling to hold on to it. A clear break above \$41 on a 2dc will confirm strength, opening the door to a stronger rise, to possibly the Jan highs in the mid \$50s. Keep your positions.	L	54.75 (Jan-15-20), 52.50 (Jan-30-20), 43 (Mar-5-20), 31.50 (Mar-18-20) (AVG: 45.40)	39.41	2dc below 30.	56
MELT UP RISE PORTFOLIO (8%)						
C	Renewed downside pressure in May is putting a lid on C. Although C has support at the Mar uptrend (\$42), a break below could shift momentum down. On the upside, if C holds at the Mar uptrend and bounced above the Apr high resistance near \$50, C could pick up momentum and continue rising to the Jan downtrend near \$75, initially. Keep your positions for now.	L	73.75 (Nov-20-19), 40 (Mar-25-20) (AVG: \$57).	42.35	2dc below 36.	75 & 85
T	ATT is showing weakness. It broke below support on a 2dc below 29, triggering our stop. ATT broke below its bullish ascending triangle, showing weakness. I sold on Friday logging in a loss. Although ATT is a great company to own all of the time due to its rock solid stability, I will stay out for now, reducing exposure to stocks, and add to my cash pile. Sell if you didn't last week.	O	38.75 (Jan-22-20), 37.50 (Feb-4-20), 28 (Apr-1-20). (AVG: \$34.75). Sold via stop loss at \$29.75 for 15% loss.	28.89	2dc below 29 (triggered)	50
NVS	NVS is rebounding from the recent fall. It touched \$87 reaching a new high for the rebound rise, but failed to hold on to the gains. It's telling us resistance at the Feb downtrend near \$87 is strong. This means NVS is vulnerable below this level. It also means a break above it is necessary to see stronger price action. The healthcare industry is one of few that seems to have a secured place in the post virus new normal. Keep your positions.	L	94.75 (Jan-23-20), 80.75 (Apr-1-20) (AVG: 87.75).	85.15	2dc below 80. 15	100

Quoting *GCRU* is permitted provided *GCRU* name, website address & subscription price are given.

All charts in *GCRU* are daily prices.

Subscribers can obtain free online chart updates for all gold shares in *GCRU* via: www.bigcharts.com. To view Canadian stks please use CA as prefix (i.e., to view Agni Eagle (Toronto) you must use CA: AEM).

Note: U should NOT feel our recommended prices are set in concrete. If mkts suddenly feel hot or cold to U, or dramatic news occurs, U can buy or sell, or stop at slightly higher or slightly lower prices. It also hinges on your experience level. Some people can use our prices as guides & know when they can take bigger risks.

Spinner: Spinner is an in-house momentum indicator (not always shown on charts). Momentum indicators use the rate of change in price to determine predominant energy flows. Spinner trading signals are generated when the faster timing line crosses above or below the slower confirming line. Upside crosses in the lower range of positive territory offer the most reliable signals for longs; downside crosses in the top range of negative territory for shorts. Avoid trading against the timing line, i.e., buying/selling if the timing line is in corrective mode (against direction of trade) unless the confirming line is positioning for a new 'confirming cycle'. It's important to always be aware of location, direction & cycling phase of the confirming line. Spinner signals are more effective in trending mkts than in trading ranges where indicators such as Stochastic & Williams %R should be used.
