TREASURY YIELDS JUMP UP! U.S. DOLLAR INDEX BOUNCES UP FROM SUPPORT GOLD RISES, BUT THEN TAKES A HIT NXE SOARS! PROTECT SOME PROFITS!

Price action over the past week has been hard to decipher... high volatility continues as the rotation out of resources and into precious metals settles.

At times the market seems erratic, trend-less and whipsawing which tends to occur when prices approach key resistance and support levels.

It's during times like these that we must take a close look at the data, the fundamentals, the macro economic perspective and most importantly, price action and chart patterns.

The disappointing jobs report from Friday was further indication inflation has peaked and it's losing steam. Some of the biggest names in the financial world are already slashing year-end growth forecasts.

It's also giving the Fed fuel to delay the tapering of assets by December as suspected.

**"The most contrarian thing of all is not to oppose the crowd
but to think for yourself" -Peter Thiel**

More and more it seems like disinflationary pressures or right out deflation are in our near future.

And it shouldn't come to as a surprise, with financial aid out of the U.S. wearing out and the Covid 19 variants growing, that a push towards safety is coming.

The U.S. dollar index dropped on Friday to a ST support level near 92. Dollar weakness pushed most asset classes up, especially gold. But today's rebound at the key ST support level has been equally crippling for assets, particularly gold.

But despite the knee jerk reaction, the rise in the dollar is on safe haven demand. The same type of demand that will ultimately push U.S. Treasuries and gold higher.

ST, however, it seems U.S. Treasury yields could rebound from the recent lows. My first chart shows the yield on a 10 year U.S. Treasury with its leading indicator. Notice it's looking ready to bounce up. A rebound rise to the 2021 highs in the 1.50%-1.70% level is likely.

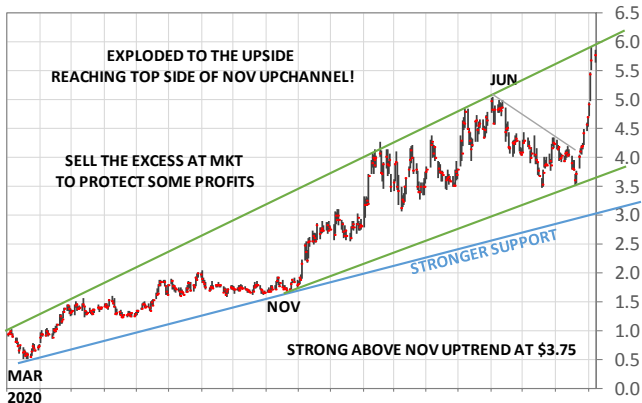

The rise in the 10 year yield tends to signal inflation but it's yet to be seen how strong the 10 year yield can bounce up with growing signs of a decelerating economy.

The intermediate trends are in place; the fundamentals are also strong; the data coming out continues to confirm the rotation the charts have been showing.

Noteworthy, NexGen Energy (NXE) reached a new high yet again. It reached the

NEXGEN ENERGY LTD. (NXE)
09/07/21 CLOSE = 5.78

top side of the Nov up-channel showing impressive strength. NXE's next resistance is at \$6. It must break above this level to show renewed strength. With its leading indicator extremely overbought, I'm taking advantage of the surge to protect some profits on the excess (50%+) and still keep a full position.

Portfolio allocation remains proper, with a 50% in precious metals, a 20% in resources (after selling some NXE later on today), 18% in stocks and 12% in U.S dollars.

We'll continue to hold the rest of our positions.

COPPER DEC 2021 (HGZ21)
09/07/21 CLOSE = 4.2815

OPEN POSITIONS
RESOURCES

Resources overall continue to downtrend showing weakness. Dr. Copper has been downtrending since May with strong resistance at \$4.50. Similar with crude oil that remains near the highs, but unable to break up into new ground. The declining price action is also very indicative of a slowdown in demand or the re-establishment of global supply chains.

URANIUM ROYALTY CORP. (URC.V)
09/07/21 CLOSE = 3.95

Uranium Royalty Corp (URC.V) broke clearly above a downtrend since May, showing impressive strength. It's now testing the Dec mid channel line near \$4.20. A clear break above this level and it's off to the races; URC could then reach the top side of the up channel near \$5.50. Keep full positions.

Altius Minerals (ALS.TO) is another of my favorites. It's holding above the Oct 2020 uptrend near \$16. However, downside pressure is growing below the Jun downtrend

ALTIUS MINERALS CORPORATION (ALS.TO)

09/07/21 CLOSE = 16.36

near \$18. This means, ALS.TO must break above \$18 to show signs of renewed strength that could open the door to more upside potential. On the downside, if ALS.TO fails to rise above resistance and breaks below support at \$16, it'll remain vulnerable with increased downside risk. Notice the leading indicator below, rising from an extreme low area, showing momentum picking up. Keep your positions through some weakness.

CLEVELAND-CLIFFS INC. (CLF)

09/07/21 CLOSE = 23.93

Cleveland Cliffs (CLF) is also holding near the highs. It remains bullish above the Oct 2020 uptrend near \$20. Lower highs since Aug suggests CLF could fall back to re-test the Oct 2020 uptrend near \$20. Moreover, notice the leading indicator below remains under pressure. Keep your positions for now. Consider buying more on a decline to \$20.

PRECIOUS METALS

GOLD DEC 2021 (GCZ21)

09/07/21 CLOSE = 1798.5

Down but not out. Gold broke to a new high on Friday for the move, showing strength. It had reached the critical resistance level at the \$1850-\$1900 level showing poise. But resistance was strong and it's now pushing gold back down to the \$1800 level suggesting the 'B' decline is not over just yet. Consider gold has growing ST support at \$1790 (5wk MA) and deeper support at the \$1760 (23 month MA). Gold remains bullish above both of these support levels. Keep your positions as long as gold holds above critical support at the Mar lows near \$1675.

Silver broke above the Jun downtrend confirming the \$22-\$24 level showing impressive strength. Silver is now pulling back in normal bullish fashion, and if it now holds

above the support area, it could resume its rise and test stronger resistance near \$29. Notice the leading indicator below rising, picking up steam. It's suggesting silver is positioned to rise further.

The HUI Index is holding at critical support near 250. It's been weaker than gold and silver but it could be ready to bounce up. A break above 265 confirms support and the recent 'bear trap'. On my next chart you will see a ratio between gold shares and silver...

Notice the ratio is at a key support level from the 2015 lows. Moreover, the leading indicator below fell further to an extreme, showing momentum could start favoring gold shares over silver. You'll notice the last time the indicator on the ratio was at current extremes, it preceded a violent upmove in gold shares, back at the beginning of 2016.

Our individual positions are down, but not out. Most are starting to show stronger base building, getting ready for an explosive upside.

NovaGold (NG) has been showing higher lows since breaking above the bullish downside wedge pattern. It's edging upward, showing momentum building and upside potential. If NG holds above the recent lows, it could rise to test the Sept downtrend near \$10. NG's leading indicator is rising suggesting a continued rebound rise is likely. Keep your positions.

Blackrock Silver (BRC.V & BKRRF,OTC) remains one of my favorites. It continues to hold with strength above the Mar 2020 uptrend near CA\$0.80. It's leading indicator below is starting to rise, picking up steam, suggesting

BLACKROCK SILVER CORP. (BRC.V)
09/07/21 CLOSE = 0.88

momentum is on the rise. The chart suggests BRC could now rise to the Aug downtrend near CA\$1.10. A break above this level and it's off to the races! Keep your positions.

KIRKLAND LAKE GOLD LTD. (KL)
09/07/21 CLOSE = 41.43

Kirkland Lake Gold (KL), another of my favorites is among the best of our positions. It bounced up with strength, nearly reaching critical resistance at \$45. It's leading indicator is very bullish showing room for more upside. Watch for a break above \$45 to show signs of renewed strength. On the downside, remember \$38 is key support. Keep your positions.

EQUINOX GOLD CORP. (EQX)
09/07/21 CLOSE = 7.31

Equinox Gold Corp (EQX) has been in high demand, It's been enjoying one of the strongest rebounds since the recent lows. EQX has clearly regained the \$7 handle and it's now testing the Oct downtrend & support near \$8. A break above this level could propel EQX to stronger resistance near \$10.50. Leading indicator below is bullish in its strongest move in almost a year. Keep your positions.

OSISKO GOLD ROYALTIES LTD (OR)
09/07/21 CLOSE = 12.07

Osisko Gold Royalties (OR) continues to form a base above critical support at \$12. To

HARMONY GOLD MINING COMPANY LIMITED (HMY)

09/07/21 CLOSE = 3.27

validate support, OR must rise above the Jun downtrend near \$13. The leading indicator below suggests momentum could be shifting to the upside. If OR breaks above \$13, it could then float to the Jun highs near \$15. Keep your positions.

Harmony Gold Mining (HMY) is also under pressure below the May downtrend. However, it's forming a downside wedge pattern at a critical support suggesting a rebound is now likely. HMY must break above \$4 to confirm rebounding strength. On the downside, notice the leading indicator, it's bearish, but near an extreme. Hold on during some more weakness, it'll likely be short lived.

HECLA MINING COMPANY (HL)

09/07/21 CLOSE = 6.14

Silver shares have also moved up from the recent lows. Their rebounds haven't been as explosive as some of our gold miners. However, they're confirming support and building a base to jump from. Price action suggests the lows are in.

Hecla Mining (HL) held above key support at the Mar 2020 uptrend near \$5.50 showing longer term strength. If HL now holds above the support level at \$5.50, it could then rise to the top side of the Mar 2020 up-channel near \$10. Conversely, a decline below the uptrend & support would be bearish and could push HL lower. Keep your positions for now.

FORTUNA SILVER MINES INC. (FSM)

09/07/21 CLOSE = 4.39

Fortuna Silver Mines (FSM) is forming a bottom at an extreme low. The recent breakout from a downside wedge confirms support at \$4. The leading indicator is on the rise, breaking above zero, suggesting a continued upside in momentum is likely. FSM could now rise to the

Feb downtrend near \$5.50. Keep your positions.

OTHER STOCKS

Airbnb (ABNB) broke out, reaching a new 4 mo high! It's looking bullish & ready for more. Notice its leading indicator below, is above zero & taking off! The indicator suggests momentum continues to rise and could push ABNB to stronger resistance at the Feb downtrend near \$180. Keep your positions for now and enjoy the ride.

Coinbase (COIN) is showing consistently higher lows since the Jul lows. The current decline pushed COIN lower, but it remains above the Jul uptrend near \$260. The leading indicator below is on the rise, showing momentum picking up steam. If COIN holds at \$260, it could then rise to the top side of the Jul up-channel near \$320. Keep your positions for now.

PayPal (PYPL) has been among our best. It's also rising with strength, breaking above a recent consolidation, approaching the Feb highs near \$310 & forming a bullish ascending triangle. It's leading indicator below is bullish, on the rise, with room to rise further. Keep your positions for now but be ready to take partial profits if targets are reached.

Shopify (SHOP) is also holding strong near the recent highs. It's struggling to rise higher. To show renewed strength, SHOP must rise above \$1650. Otherwise, it could fall back. A break below the May uptrend near \$1500 could open the door to a continued decline, to

possibly the Jun 2020 uptrend below \$1200. If SHOP falls to this level, it'll be time to buy. Keep your reduced positions.

UBT, our LT U.S. Treasury ETF is starting to break below a symmetrical triangle. It's looking weak below the Jul downtrend and its leading indicator, Spinner, looks bearish. UBT could now fall back and retest the Mar uptrend near \$50. Buy more on a dip that holds above the Mar uptrend near \$50. Keep your positions for now and during some weakness.

Good luck and good trading,

PRECIOUS METALS PORTFOLIO (50%)						
GOLD (GCZ21)	Overweight. Gold bounced up higher last week nearly reaching the key resistance area at the \$1850-\$1900 level. Today's price action, however, shows resistance remains strong as gold is back to testing support at \$1800. If gold now breaks clearly below this level, on a decline below \$1790, it could then fall further, to possibly deeper support, gold's 23 month MA near \$1760. If gold holds above \$1760, it could rise to re-test critical resistance at the \$1850-\$1900 level. A break above resistance would confirm the end of gold's 'B'decline and the start of a 'C' rise. EQX	Holding full position. EQX rose to a new 2+ mo high looking sharp and strong. A very bullish leading indicator suggests more upside. EQX's next key "test" will be to break above resistance at \$8.25 (the Oct downtrend). If it does, a continued rise to \$10, the next key resistance, would then be likely. If EQX fails to break \$8.25, it could then fall back to test ST support at \$7 or lower. Keep your positions.	H	\$10.20 (Dec-22-20), \$10.80 (Jan-6-21), \$9.20 (Feb-17-21), AVG: \$10. CURRENCY - CASH (10%)						
U.S. DOLLAR (DXM21)	The U.S. dollar index is confirming support at the May-Jun uptrend near 92. It's bouncing up with strength suggesting it could resume the uptrend and rise to the top side of the May-Jun upchannel. The U.S. Dollar Index is looking bullish and a continued rise would be dis-inflationary or right out deflationary. The deflationary scenario is bullish for U.S. Treasuries and gold, even though the initial knee jerk reaction for gold was to fall precipitously. Keep your cash position in U.S. dollars. Trades are driven mainly by technical analysis but stocks are picked based on their fundamentals, momentum and their overall strength in their sector. All recommended companies are great assets, and even though we trade short and intermediate trends, they are worthwhile keeping longer term if you're building a longer-term portfolio.

I also believe in an approach that allows us to average in and average out. This is important because averaging in near a low, and averaging out near a peak gives us great profit advantages.

My portfolio is designed for you to follow it down to the penny, but you can also use it as a reference or guide. Or you can just use the individual trades I'm constantly coming up with.

The track record I keep takes into account all of the trades executed. It doesn't take into account performance on cash, dividends nor does it contemplate associated fees or expenses.

For trading purposes, I consider a full position to be one that is 4% of my total portfolio. I tend to buy partial positions (consisting of 2% of total portfolio) and at any given moment I could be overweight, meaning owning more than a full position.

On the trader sheets found in the final pages of each issue, you'll see a reference to our positioning, be it overweight, full, reduced or small. I also include next to each portfolio section, the percentage allocated to that particular sub portfolio.

Transparency, communication and discipline are keys to successful trading. If you have any questions or concerns, please feel free to email me at oayales@adenforecast.com.

Note: U should NOT feel our recommended prices are set in concrete. If mkts suddenly feel hot or cold to U, or dramatic news occurs, U can buy or sell, or stop at slightly higher or slightly lower prices. It also hinges on your experience level. Some people can use our prices as guides & know when they can take bigger risks.

Spinner: Spinner is an in-house momentum indicator (not always shown on charts). Momentum indicators use the rate of change in price to determine predominant energy flows. Spinner trading signals are generated when the faster timing line crosses above or below the slower confirming line. Upside crosses in the lower range of positive territory offer the most reliable signals for longs; downside crosses in the top range of negative territory for shorts. Avoid trading against the timing line, i.e., buying/selling if the timing line is in corrective mode (against direction of trade) unless the confirming line is positioning for a new 'confirming cycle'. It's important to always be aware of location, direction & cycling phase of the confirming line. Spinner signals are more effective in trending mkts than in trading ranges where indicators such as Stochastic & Williams %R should be used.
