JUNE 7, 2017

IN ITS 16TH YEAR- N° 741

A GOOD WEEK FOR OUR POSITIONS

Inflation pressures, the back-bone of gold's rise since the 2015 lows, are sliding... The yield on 10 year U.S. Treasuries declined to the lowest level since Trump's election. Plus, the yield broke below its 200-day MA confirming a strengthening bear...

But gold continued to rise, surpassing its April highs, and reaching highs seen last November.

And this time we can thank safe haven demand as global uncertainties and geopolitical worries rise...

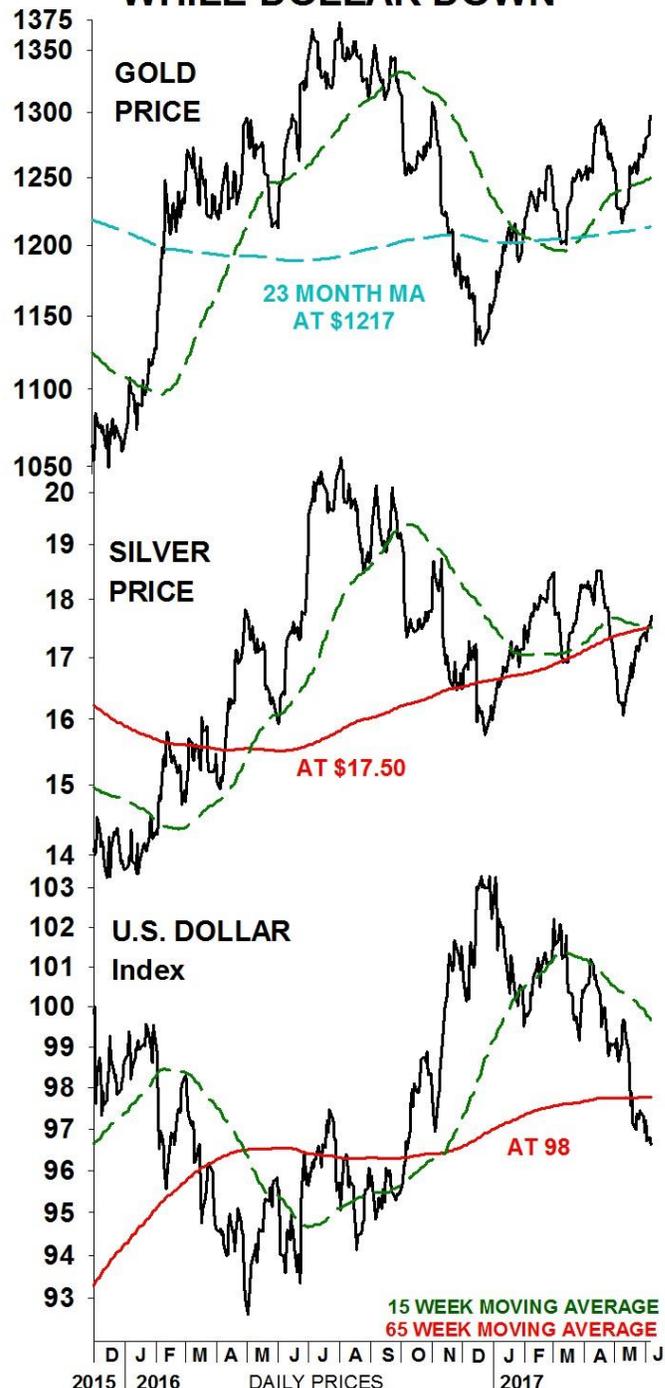

This week alone, we saw President Trump pull the U.S. from the Paris Agreement on climate change, renewed terrorist attacks in London and escalating tensions in the Middle East as many sever relations with Qatar due to its financing of terrorism and closeness to Iran.

Plus the U.K. election and the ECB meeting added to the list of uncertainties.

Are renewed global uncertainties reviving gold's 'A' rise, or is gold embarking on a new 'C' rise following a mild 'B' decline?

"He who owns the gold, makes the rules" – old gold bug's adage –

GOLD & SILVER BOUNCING UP, WHILE DOLLAR DOWN

It's too soon to tell. However, gold is breaking above the Aug downtrend and surpassing what we've thought to be the 'A' peak in April. We've been saying the key resistance area for gold is between \$1290 and \$1300. Gold closed right in the middle yesterday.

One thing seems certain, and that is when markets rise on safe haven demand, it doesn't tend to last long. We could still see volatility at current levels in gold. However, the longer-term back-bone support for gold remains in play.

And if uncertainties ease and inflation continues to slide, we could see gold fall from current levels to key support levels near \$1240 or lower. And if that ends up being the case, the 'A' rise could be forming a double top.

For now, a Fed rate hike next week remains on the radar. Although a rate hike is likely to give gold support, it could also dampen upside potential...

Why?

If inflation slides and rates rise, real rates rise. Rising real rates tend to compete with gold and add downward pressure...

Fed's Brainard told it best last week. She said "If the soft inflation data persist (meaning decline in PCE Index over a 12 month period to 1.5%), that would be concerning and, ultimately, could lead me to reassess the appropriate path of policy."

Here's an interesting article from Bloomberg regarding softening inflation:

<https://www.bloomberg.com/news/articles/2017-06-05/so-much-for-xiflation-china-slowdown-derails-inflation-calls>

Another key driver for gold, although not completely independent from the reasons cited, has been dollar weakness, which is our **Chart of the Week** today. You can see the dollar remains weak at current levels. It remains near a soft support level at 96.50.

Last week we bought a call spread on the dollar for a potential bear market rebound to the 100 level. The trade has 93 days until expiration. If you didn't buy some and are looking for exposure to this trade, we recommend buying the call spread at mkt.

Remember this trade is designed to gain from a 'dead cat bounce' essentially, don't load up on it as the dollar outlook remains bearish with more downside risk.

Keep in mind, the dollar's next real support level is at the bottom side of a 2+ year sideways band near 93.50. A decline to this level is likely before the end of the year, see the chart.

Silver linings... Silver had an even better jump yesterday. You can see it broke above its 15wk MA confirming strength shown earlier in May when silver surpassed its 5wk MA.

Silver is picking up steam while it approaches a key downtrend and resistance level near \$18.25. A break above this level could turn silver bullish, exposing a stronger side of silver's recent bull market run.

Remember, as we've shown in the past, when gold gets hot, silver gets hotter. Stronger silver is definitely a bullish indicator for gold. Our full position is set!

Gold shares are also displaying good strength. They rose sharply yesterday and are at the brink of breaking a key resistance level of its own (the Aug downtrend).

Junior gold miners led the bullish rise which tends to be another bullish indication for the entire gold universe. Interestingly, the next chart compares gold shares to gold close up. Both are indexed to 100 since last December.

Note that gold shares have been stronger than gold this year. And each time gold shares have fallen to meet gold, gold shares jump up once again. Yesterday was no exception.

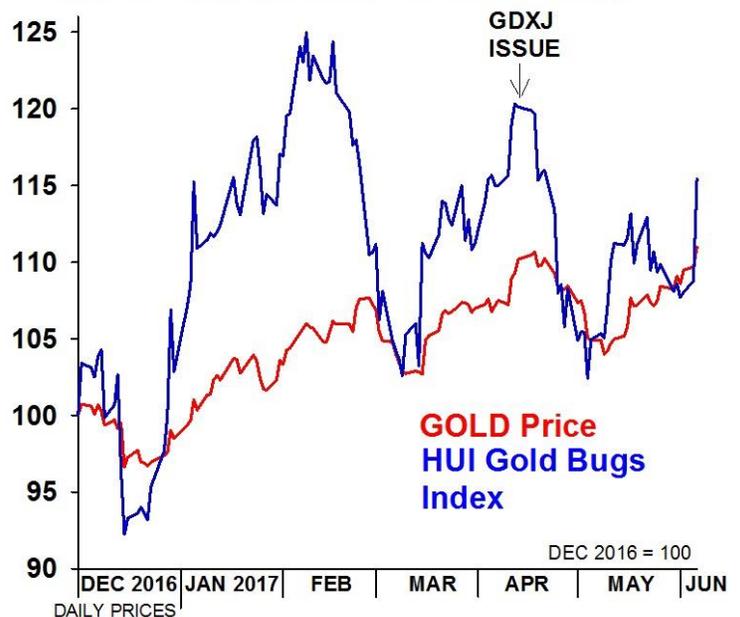

The big jump up yesterday ended the weakness in juniors caused by the GDXJ issue!

Finally, we're seeing stronger signs emerging of a bull market confirmation in gold!

We picked up more juniors at the right moment. We were waiting to pick up more on a further decline and were able to pick up more MUX. However, BTG never reached our re-buy target. We currently have full positions in GDXJ, MUX and some BTG. We also continue to hold a partial position in AEM and WPM (previously SLW).

With yesterday's bullish rise, we're already sitting on built-in profits while our positions approach the first profit targets, particularly in the juniors.

GOLD SHARES LEADING GOLD

Keep your positions and remember to sell partial positions at profit targets.

One of the hardest parts of being a trader is sticking to your original course of action. The reason is that things change and we must be willing to cope with change. However, when strategy has been on point, it's important to follow it and take profits when targets are reached. One of the main reasons why traders end up losing instead of winning is precisely this... failing to follow your original plan.

Also, keep in mind we try to provide key levels for buying and selling. However, it's ultimately up to you how you implement your strategy.

Trading is not for robots, but that is another conversation we can have with a glass of wine... For now, always keep a close eye on your portfolio and its movement. Don't stress over daily movements either. Just keep your eye on targets.

Price movement is prescient. It can foresee future events. And that's because price movement discounts everything and anything. Trust it; it's your best friend when investing.

Crude oil remains below the \$50 handle. Speculation that the oil glut will remain given Trump's removal of the U.S. from the Paris Agreement on climate change put downside pressure on crude. Keep your half position.

However, the privatization of air traffic control in the U.S. is a move towards improving public infrastructure. If this is a sign of anything, it's that we could see Trump's infrastructure bill come to fruition. Something that could crunch demand for resources across the board. This will continue to support copper and crude oil.

And although the jobs report came in lower than expected last week, jobs openings are rising. A sign that the slack in the labor market is not necessarily related to the economic slump but more with the qualifications of job seekers...

The stock market keeps on rising! The Dow Industrials broke above a bullish pattern shown last week (an ascending triangle) when it reached new record highs. The pattern is showing more upside potential for stocks. Keep your DIAs!

Our strategy for this week is to stay tight. Watch the rise in gold, silver and gold shares unfold. Silver and gold's' resistance at \$18.25 and \$1300, respectively, are key for the whole gold universe. A break above these levels could push gold to its 4 year

high near \$1380. But if gold and silver fail to rise above the resistance, we could see the decline resume. Also, keep in mind gold could have fooled us earlier this month, and the 'A' rise could still be developing. My eyes will stay peeled!

Good luck and good trading!

Omar

P.S. Here's another good article from [zerohedge.com](http://www.zerohedge.com). It gives a different perspective on the whole Saudi Arabia/Qatar issue which could increase tensions down the road...

CHART SECTION

GOLD AUGUST 2017 (GCQ17) 6/6/2017
CLOSE = 1297.5

Long	1170 (Jan-5-17), 1220 (Mar-16-17). Sold half at 1287 for an average 8% gain.
Stop	2dc below 1215 (adj)..
Profit Targets	1380 & 1450.
Recom	Keep second half position. Buy some near 1240.

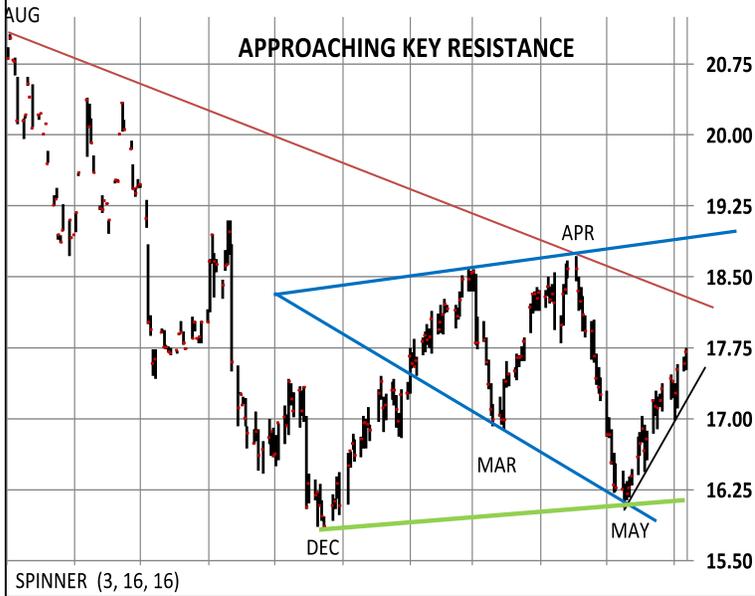

Sprott Physical Gold Trust (PHYS) 6/6/2017
CLOSE = 10.55

Long:	9.63 (Jan-5-17), 10.12 (Mar-16-17). Sold half at 10.54 for an average gain of 7%.
Stops	2dc below 9.90 (adj).
Profit Targets	11.50 & 12
Recom	Keep second half position. Buy near 10.10.

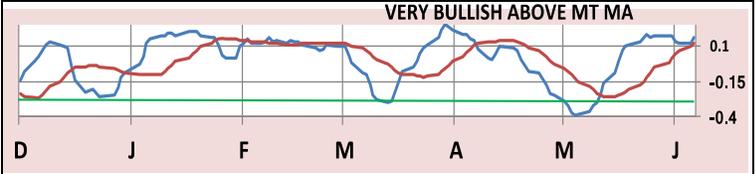

Gold rose above the Jul downtrend showing impressive strength! Fear and uncertainty seem to be reviving gold's 'A' rise! Moreover, notice Spinner at a resistance level but with room to rise further. This tells us a clean break above 1300 could push gold into a stronger phase of the current rise from the Mar lows. If gold breaks 1300, a rise to our first profit target at 1380 would then be likely. On the contrary, if gold fails to surpass 1300, it'll show weakness and could then resume its decline. The first target on the downside would be the Dec uptrend near 1240. We recommend buying some at that level and more if gold declines to its next support levels at 1220 and 1200. Keep your positions and sell your second half at our first target.

**SILVER JULY 2017 (SIN17) 6/6/2017
CLOSE= 17.71**

Long	17.35 (Mar-16-17), 17 (May-1-17), 16.35 (May-4-17).
Stop	2dc below 16.
Profit Targets	19.25 & 20.50
New Recom	Keep your positions. If not in, buy near 17.

**Sprott Physical Silver Trust (PSLV) 6/6/2017
CLOSE= 6.72**

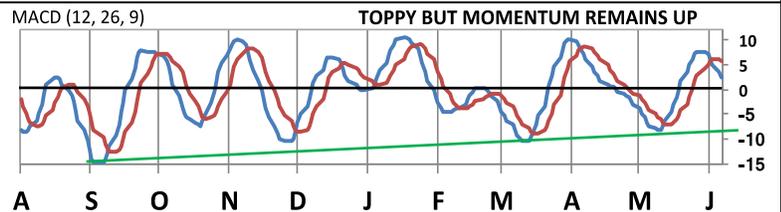

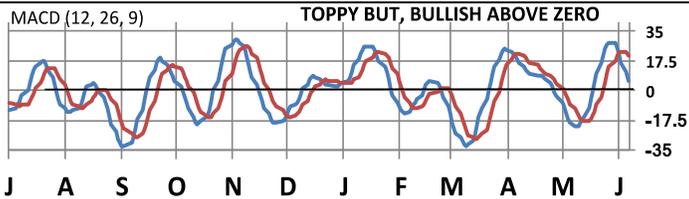

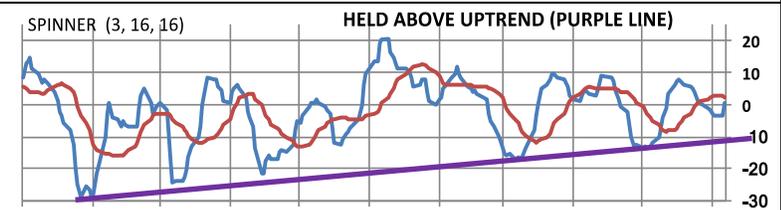

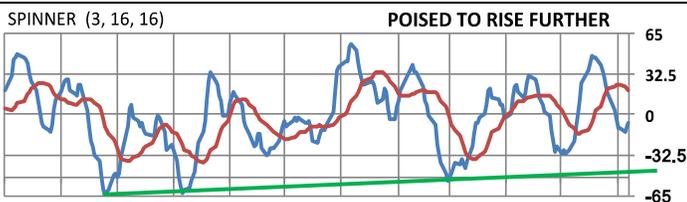

Long	6.60 (Mar-16-17), 6.40 (May-1-17), 6.20 (May-4-17).
Stop	2dc below 6.
Profit Targets	7.20 & 7.90
New Recom	Keep your positions. If not in, buy near 6.55.

Silver is rising with a passion! It finally woke up and broke above its 15wk MA. It's now poised to rise to its next key resistance at 18.25. A break above this level would show renewed strength and a continued rise to the top side of the broadening right angle near 19.25 would be likely. Keep in mind the Aug downtrend & resistance level near 18.25 is a tough one. If silver is unable to surpass this level, it'll show weakness and a continued decline would be likely. Important to note, when silver is hot and outperforming gold, it's a bullish sign for the entire gold universe. Keep your positions. Sell half at first profit target.

**ADEN GOLD STOCKS ADV/DECLINE 6/6/2017
CLOSE = 4495**

HUI GOLD BUGS INDEX (HUI) 6/6/2017 CLOSE= 204.55

Bullish! Gold's rise on safe haven demand gave gold shares a super boost, pushing them above key resistance levels. HUI's rise above the Aug downtrend confirms the A/D Line's recent bullish break. This tells us gold shares have turned bullish and more upside is now likely. Notice Spinners for both charts remain uptrending. This tells us momentum continues to rise. HUI's next key resistance and target is at the Feb high near 225. A break above this level would confirm today's strength and a rise to HUI's next resistance at 250 would then be likely. We picked up more MUX earlier this week on weakness and now have solid positions in gold shares. We currently have positions in MUX, BTG, GDXJ, AEM and WPM. On the downside, HUI's Dec uptrend near 185 is a bull market support. A break below this level would show weakness and a decline to the Dec lows would then be likely. Keep your positions and be ready to sell partial positions at profit targets.

MKT VECTORS JR. GOLD MINERS (GDXJ) 6/6/2017 CLOSE= 34.04

Junior Gold Miners ETF (GDXJ) - NYSEArca

Long at:	37.30 (Mar-16-17), 35.75 (Apr-17-17), 31.90 (Apr-25-17), 29.70 (May-4-17).
Stop:	2 dc below 28.
Profit target:	38 & 50.
New Recom:	Keep your positions.

GDXJ jumped up from its Dec uptrend support level, breaking above a soft resistance at the Feb downtrend. GDXJ is now on pace to test the Aug downtrend near 37. A clean break above this level on a 2dc would show renewed strength that could push GDXJ to the Feb highs near 43 initially. Spinner is reversing and starting to rise again. This tells us momentum is likely to creep back up giving GDXJ an upward boost. The junior miners are finally waking up. If the junior miners continue to rise, it'll be very bullish for the entire gold universe. Keep your positions and sell partial positions at profit targets.

Agnico Eagle Mines Limited (AEM) 6/6/2017 CLOSE= 50.58

Agnico Eagle Mines Limited (AEM) -NYSEArca

Long:	42.50 (Mar-16-17). Sold half at 46.05 for an 8% gain. Some may have sold second half at 50 for a 17% gain. If you didn't sell, keep your positions.
Stop:	2dc below 40.
Profit Target:	50 (reached!) & 60.
New Recom:	Keep your positions. Buy again near 45.

AEM broke and stayed above 50 for the first time since Feb showing impressive strength. Moreover, the break is also a confirmation of the bullish H&S bottom pattern with upside target near 60, the Aug highs. This tells us AEM is now positioned to rise to the Aug highs. We recommend holding on to the second half of your position for now (if you didn't sell) and selling at our second profit target near 60. If AEM declines to the 2016 bull market uptrend near 45, we recommend buying more. The Mar low & support near 40 will remain a key level to watch on the downside.

Wheaton Precious Metals Corp Co (WPM) 6/6/2017 CLOSE= 20.85

Wheaton Precious Metals (WPM)

Long at:	19.80 (Mar-17-17). Sold half at 21.65 for a 9% gain. 18.90 (May-4-17).
Stop:	2dc below 18.50
Profit Target	25 (adj) & 28.
New Recom:	Buy again near 19.50.

WPM is forming a bullish flag pattern with flag pole near 22. This tells us a break above 22 on a 2dc could propel WPM to the 25 level. Notice Spinner reversing downside course and testing the zero line. A bullish sign showing momentum remains on the rise. On the downside, the Dec uptrend near 18.50 remains key. Keep your positions as long as this level holds. Buy on weakness near 19.50.

B2Gold Corp. (BTG) 6/6/2017 CLOSE= 2.82

B2Gold Corp. (BTG) -NYSE MKT

Long at:	2.45 (May-25-17).
Stop:	2dc below 2.30 (adj)
Profit target:	3 & 3.30
New Recom:	Keep your positions. Buy more at 2.50.

BTG burst to the upside! It didn't allow us a chance to buy more. BTG is now very bullish. Notice Spinner holding at the zero line and its MT MA. It's now starting to rise confirming strength. BTG is poised to rise to the Aug downtrend near 3.50. It's also approaching our first profit target. Remember to sell half of your position at each target. On the downside, the Jun 2016 uptrend is key near 2.20. Keep your positions as long as BTG holds above this uptrend.

McEwen Mining Inc. (MUX) 6/6/2017 CLOSE= 2.85

McEwen Mining Inc. (MUX) - NYSE

Long at: 2.72 (May-25-17), 2.50 (May 31-17), 2.50 (Jun 5 -17).

Stop: 2dc below 2.35

Profit target: 3.50 & 4

New Recom: **Keep your position. Buy more near 2.60.**

MUX slid to the 2.50 level giving us a chance to pick up some more. Today, it jumped up showing it has strong support at the 2.50 level. Spinner formed a bottom near zero and it's now on the rise showing momentum growing. Keep your positions for now and sell half at each profit target.

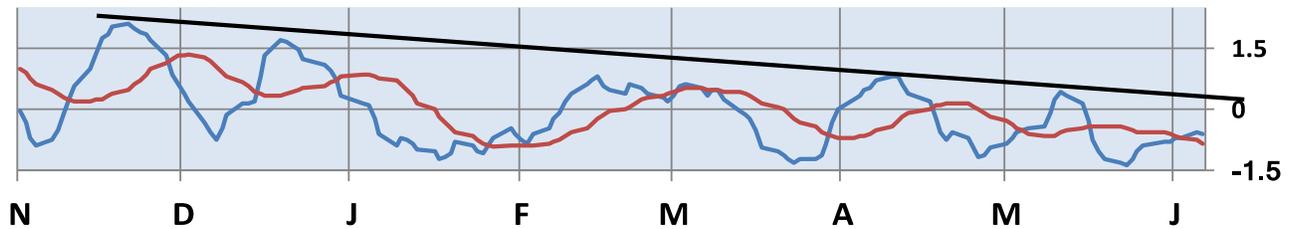

U.S. DOLLAR INDEX JUNE 2017 (DXM17) 6/6/2017

CLOSE= 96.591

SPINNER (3, 16, 16)

MOMENTUM DOWNTRENDING

Bull Call Spread

Sept 2017 99/102 @ \$400 (May-31-17).

Recom

Keep your position. Sell on a rise above 99.

The dollar continues to show weakness as it remains near the recent lows. Spinner continues to show weakness below its downtrend and the zero line. A break below the dollar's 'soft' support at 96.50 would confirm a strong bear and a decline to a 2+ year support near 93.50 would then be likely. On the upside, notice the dollar is actually holding at its soft support while forming a bullish downside wedge pattern. Moreover, although Spinner is showing overall weakness, its break above the MT MA is telling us a 'dead cat bounce' remains likely. On the upside, the dollar must break clearly above the Jan downtrend near 100 to show real signs of strength. In the meantime, we picked up bull call spreads last week looking to profit from a rebound. Our exposure is limited to \$400 and still has over 90 days left. Keep your positions but be quick to sell on a bounce above 99.

CBOE Interest Rate 10 Year T No (^TNX) 6/6/2017

CLOSE= 2.15

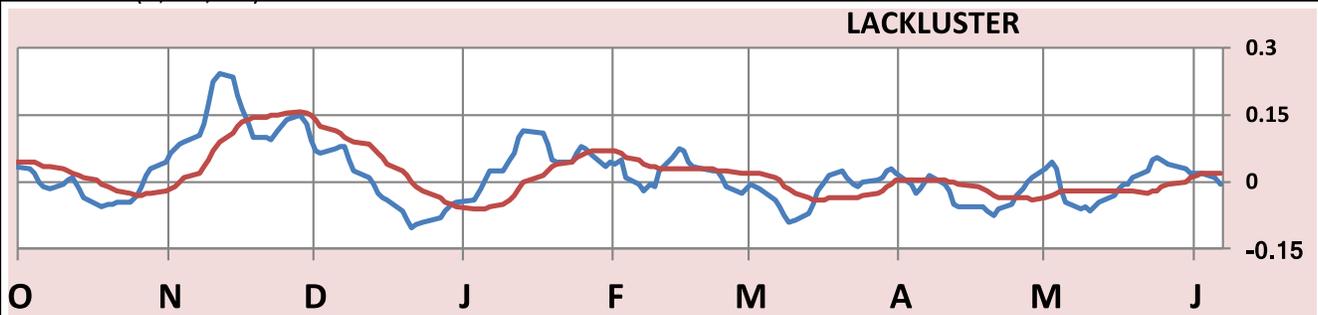

CBOE Interest Rate 10 Year T No (^TNX) - Chicago

New Recom: **Stay out**

The 10YY continued to decline as inflation expectations declined too. The 10YY is now testing its bull market support near 2.12%, the Jul 2016 uptrend. A break below this level on a 2dc would confirm weakness that could push the 10YY to the bottom side of the Mar downchannel near 2%. Spinner remains below both its MT MA and zero line. This tells us downside pressure remains strong and more downside is likely ST. Keep in mind a declining 10YY may continue giving gold a boost.

COPPER JULY 2017 (HGN17) 6/6/2017

CLOSE= 2.547

New Recom

Stay out for now.

Copper showed weakness when it failed to rise above the Feb downtrend & resistance level. Continued weakness is a sign that inflation continues to slide. Copper is now approaching its support level at 2.45. A break below this level would push copper to the bottom side of the Feb downchannel near 2.40. Moreover, Spinner failed to maintain upside momentum and it's breaking below the zero line once again. This tells us downside pressure remains strong and additional downside is likely ST. Stay out for now.

LIGHT CRUDE OIL JULY 2017 (CLN17) 6/6/2017 CLOSE= 48.19

SPINNER (3, 16, 16)

DOWNSIDE PRESSURE

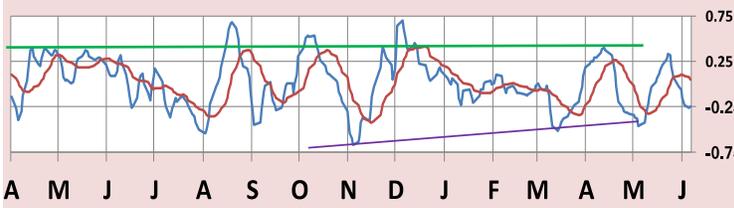

Long;	45.90 (May 4, 2017). Sold half at 51.55 for a 12% gain.
Stops	2dc below 41.50.
Profit Targets	52 (reached!) & 55
New Recom:	Keep second half of position.

POWERSHARES DB Oil ETF (DBO) 6/6/2017 CLOSE= 8.28

SPINNER (3, 16, 16)

APPROACHING SUPPORT BUT WEAK

Long	8.05 (May 4, 2017).
Stops	2dc below 7.25.
Profit Targets	8.85 & 9.50
New Recom:	Keep your positions. Sell half at profit target.

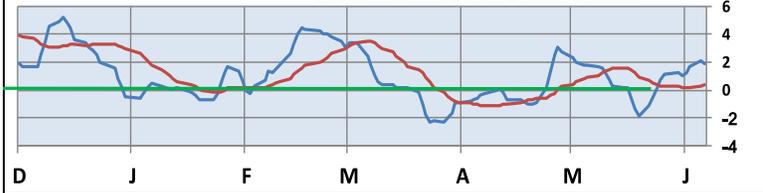

Downside pressure remains strong. Crude continued to slide showing weakness... The cancellation of the Paris Agreement on Climate Change by the U.S. was seen to expand the existing oil glut. However, crude remains near key support levels as real demand slowly starts to tighten. Moreover, escalating geopolitical tensions in the Middle East coupled with infrastructure spending in the U.S. could boost demand ST. This tells us a renewed rise to the Jan downtrend near 52.50 remains likely. We recommend keeping the second half of your position for now.

SPDR DOW JONES INDUSTRIAL (DIA) 6/6/2017
CLOSE= 211.37

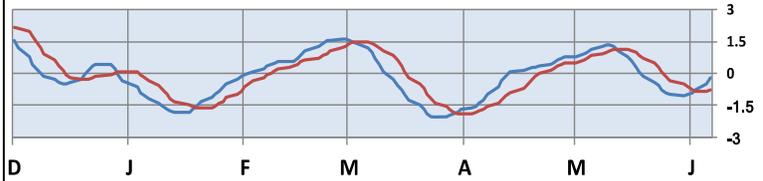

SPINNER (3, 16, 16)

BULLISH WITH ROOM TO RISE FURTHER

MACD (12, 26, 9)

ON THE RISE

Shares Transportation Average (^IYT) 6/6/2017
CLOSE= 167.45

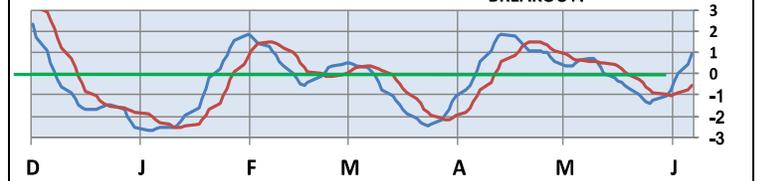

SPINNER (3, 16, 16)

RISING!

MACD (12, 26, 9)

BREAKOUT!

Entry Level	205 (Apr-11-17).
Stop	2dc below 200
Profit Target	225 & 240
New Recom:	Keep your positions. Sell half at first profit target.

Entry Level	N/A
Stop	N/A
Profit Target	N/A
New Recom:	Stay out.

The stock market continues to rise with impressive strength. Price action on the Averages was very bullish. The Industrials reached new highs while the Transports broke above a key resistance at the Apr highs. Although the action is not a text book bullish Dow Theory re-confirmation, it's very close to it, confirming bullish sentiment and momentum overall. Moreover, the Industrials rose above the bullish ascending triangle confirming strength and exposing a continued upward path. We recommend keeping your positions as long as DIA holds above 200.

Quoting *GCRU* is permitted provided *GCRU* name, website address & subscription price are given.

All charts in *GCRU* are daily prices. Subscribers can obtain free online chart updates for all gold shares in *GCRU* via: www.bigcharts.com. To view Canadian stks please use CA as prefix (ie, to view Agnico Eagle (Toronto) you must use CA:AEM).

Note: U should NOT feel our recommended prices are set in concrete. If mkts suddenly feel hot or cold to U, or dramatic news occurs, U can buy or sell, or stop at slightly higher or slightly lower prices. It also hinges on your experience level. Some people can use our prices as guides & know when they can take bigger risks.

Spinner: Spinner is an in-house momentum indicator (not always shown on charts). Momentum indicators use the rate of change in price to determine predominant energy flows. Spinner trading signals are generated when the faster timing line crosses above or below the slower confirming line. Upside crosses in the lower range of positive territory offer the most reliable signals for longs; downside crosses in the top range of negative territory for shorts. Avoid trading against the timing line, ie, buying/selling if the timing line is in corrective mode (against direction of trade) unless the confirming line is positioning for a new 'confirming cycle'. It's important to always be aware of location, direction & cycling phase of the confirming line. Spinner signals are more effective in trending mkts than in trading ranges where indicators such as Stochastic & Williams %R should be used.
